

Xerox Product Response to CERT[®] Vulnerability Note VU#206537: Apache vulnerable to DoS

Audience and Purpose

The primary audience for this document is Xerox analysts and customers who want information regarding how Xerox products respond to [CERT[®] Vulnerability Note VU# 206537](#), issued by CERT[®] on April 8th, 2003. The following sections provide excerpts from the CERT[®] advisory and the corresponding Xerox response.

Background

The CERT[®] Coordination Center (CERT/CC) is a center of Internet security expertise at the [Software Engineering Institute](#), a federally funded research and development center operated by [Carnegie Mellon University](#). CERT[®] studies Internet security vulnerabilities, handles computer security incidents, publishes security alerts, researches long-term changes in networked systems, and develops information and training to help you improve security at your site.

[CERT[®] Vulnerability Note VU# 206537](#) describes a remotely exploitable denial-of-service vulnerability that exists in the Apache HTTP Server. Exploitation of this vulnerability may allow an attacker to consume all available system resources, resulting in a denial-of-service condition.
