

Xerox Ecolabel Products

- ENERGY STAR (**PRE APRIL 1, 2007**)
 - Environmental Choice EcoLogo
-
- **Products indicated below were certified under the previous versions of ENERGY STAR (pre April 1, 2007).**
 - **For products certified to the new requirements (effective April 1, 2007), please visit our [Ecolabel Website](#)**

Because we design our products with environmental considerations in mind, Xerox is able to offer a wide selection of products that meet or exceed the requirements of environmental labeling programs such as the [International ENERGY STAR](#), [Canada's Environmental Choice EcoLogo](#) and [Germany's Blue Angel](#).

USEPA's [ENERGY STAR](#) Program

What is ENERGY STAR?

The ENERGY STAR program is a team effort between the EPA and the office equipment industry to promote energy-efficient personal computers, monitors, printers, fax machines and copiers. Reducing energy and paper consumption of this equipment will help combat smog, acid rain and long-term changes to the climate by decreasing the emissions that result from generating electricity and manufacturing paper.

Why should you care?

ENERGY STAR products use about half as much electricity as conventional equipment...that's not only a big plus for the environment, it also translates into big savings for you when it comes time to pay the utility bill. Using less paper is equally important. In fact, it takes 10 times more energy to manufacture a piece of paper than it does to make a copy. Reducing the amount of paper you use also means you're saving on mailing costs, reducing filing space, and cutting down on the harmful emissions that result from producing the paper.

How does it work?

The features which enable office equipment to be compliant with ENERGY STAR guidelines differ depending on the product type and its copy or print speed.

Copiers

To conserve energy, all ENERGY STAR copiers must be preset at the factory to power off completely after a specified period of non-use. Copiers that produce 44 copies per minute (cpm) or less, must power off in 60 minutes, while copiers with a speed of 45 cpm or greater must power off completely after 90 minutes.

Copiers launched after June 30, 1997 offer an additional ENERGY STAR feature...they enter a low-power state after 15 minutes of non-use. This ENERGY STAR feature, applicable to copiers with a speed of 21 cpm or greater, works with the auto-off function to dramatically reduce your monthly energy consumption...and your electricity bill!

Multifunction Devices

Multifunction devices (copiers with additional capabilities for printing, faxing, and/or scanning) must be preset at the factory to enter a "sleep mode" -- a state of low energy consumption -- following a period of non-use that ranges between 15 and 120 minutes depending on the speed of the machine.

Printers and Fax Machines

Printers and fax must be preset at the factory to enter a low power state after a specified time period of non-use **to conserve energy**. For printers, this period of non-use ranges from 15 minutes (for slower machines) to 60 minutes (for printers with a speed of 14 pages per minute [ppm] or greater).

For fax machines, the period of non-use ranges from 5 minutes (for fax with a speed of 7 ppm or below) to 15 minutes (for fax with a speed of 14 ppm or greater).

Scanners

Scanners must be preset at the factory to enter a low-power state after 15 minutes of non-use. To meet ENERGY STAR requirements, scanners may not exceed a maximum of 12 watts in this low-power mode.

What should you do?

Check out our [list of ENERGY STAR products](#). To find out more about Xerox products and ENERGY STAR, or about how Xerox can help you communicate the benefits of ENERGY STAR equipment to your organization, contact your Xerox Account Representative or Authorized Sales Agent at 1-800 ASK XEROX.

Canada's Environmental Choice EcoLogo^M Program

Environment Canada established the Environmental Choice program in 1988 to help consumers identify "environmentally-responsible" products and services. Copier, printer and fax products must meet energy efficiency and emissions criteria, and exhibit compatibility with recycled supplies. Currently, Environmental Choice has more than 1600 approved products and 140 licensees. Xerox has been a leader in offering EcoLogo-approved products...in 1996, Xerox became the first company licensed to use the Environmental Choice EcoLogo for its copiers, printers, and fax machines.

Germany's Blue Angel Ecolabel

Blue Angel is Germany's voluntary ecolabel for environmentally-preferable products. Blue Angel presently has criteria for copiers, printers, faxes and fax-based multifunction machines. These criteria are among the strictest in the world and are typically revised every three years.

Blue Angel's broad scope of criteria includes targets for energy efficiency, recyclable design, material requirements and restrictions, emissions, and machine and cartridge takeback. This ecolabel is becoming a requirement of a growing number of Xerox customers worldwide.
