# Barr Systems, LLC

## Barr Host Communication Suite

The Barr Host Communications Suite (BHCS) provides robust and stable connectivity and spooling of applications resulting in productivity gains. It is ideal for enterprise environments that need to manage multiple sources and destinations with all types of files from various applications—all from a single location.

### Solution

The BHCS Spool window gives users the ability to control and manipulate files without having to touch the host.

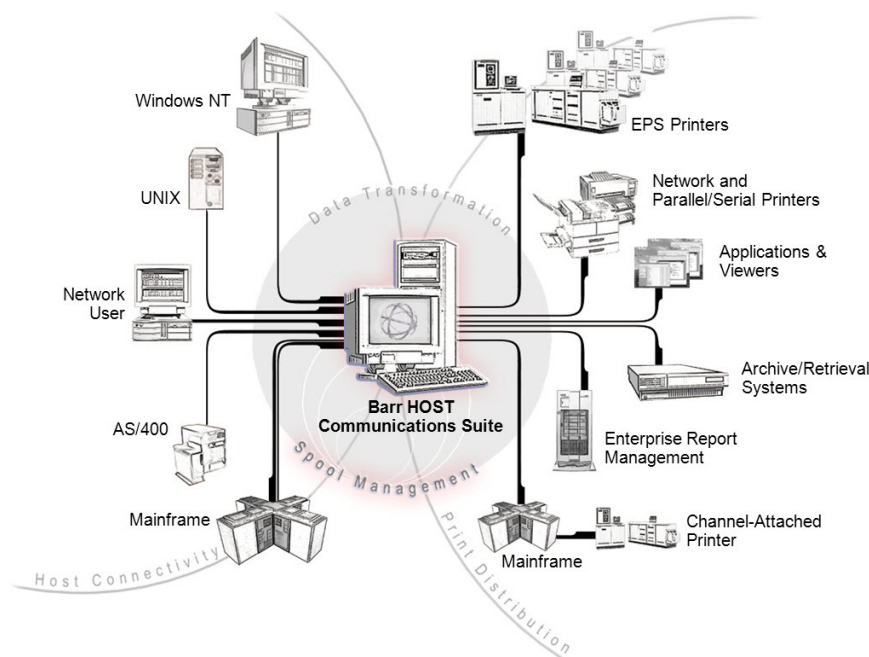

### Value

With advanced mainframe, mid-range and network connectivity, the Barr Host Communications Suite controls and automates workflows, routes jobs, and manages output simultaneously.

- Retain jobs and reprint of page ranges for cost savings
- Transform files for additional destinations and cold storage (additional module required)

### Benefits

- Ensures accurate and secure transfer of files via Network Job Entry, Remote Job Entry, Bus and Tag/ESCON Channel, and TCP/IP across the enterprise.
- Allows enterprises to eliminate printer downtime and improve printer utilization to its fullest potential.
