

Xerox® Colour C60/C70 Pro Printer

Achieve higher productivity.

Unleash higher levels of productivity and automation with the Xerox® Colour C60/C70 Pro Printer, which combines EFI™ Print Servers with Fiery software options to further optimise workflow, from pre-press to finishing.

OPTIONS COME STANDARD WITH THE EFI PRINT SERVERS ON THE PRO PRINTER.

For the EFI EX Print Server, Fiery Compose provides sophisticated document composition tools and a visual user interface to speed up complex assembly functions and improve page-level views. Working within Fiery Command WorkStation® in a single window, operators can manage tabs, specify media selections, perform last-minute edits and assign multiple finishing requirements, creating a fully automated digital print process for finished documents.

Included with the EFI EXi Print Server, Fiery Impose is an intuitive PDF-based imposition solution that streamlines and automates the job setup process. Its tight integration with Fiery Command WorkStation helps to increase production efficiency. Booklet creation, makeready gangups and support for cutting and stacking are some of the prepress functions that provide advanced and new operators with simple, fast and automated digital print workflows.

Fiery Hot Folders and Virtual Printers let you do more work by automating the job submission process. They reduce errors and automate repetitive tasks with a simple

drag-and-drop operation. No other software is required to take advantage of this automation from the client's desktop. When published and shared, all users on the network have the ability to drag and drop native source files (PS, TIFF, EPS, PDF, VDP EFI FreeForm™ and Microsoft®) to a folder for fast, error-free printing from their desktop to the Xerox® Colour C60/C70 Pro Printer.
