Section 508 Compliance Made Easy

Customized Applications Service (CAS) can help you enable others.

Xerox has a long, proud tradition of designing products that are accessible to individuals with disabilities. When Section 508 of the Rehabilitation Act made accessibility a requirement for all electronic and information technology used by Federal agencies, Xerox was already ahead of the curve. In keeping with the company's long-standing commitment to accessibility, Xerox responded to Section 508 with extraordinary diligence.

The Customized Applications Service (CAS) group within Xerox is committed to being the vendor of choice for customers seeking accessible solutions. That means providing customers with detailed, up-to- date accessibility equipment for the full line of Xerox products. It means training our sales executives in the intricacies of Section 508.

Current Offerings:

- Angled Consoles
- Adjustable Control Panels
- Braille Labels

Angled Consoles

- The inclined position of these control consoles provides enhanced visibility and access for wheelchair operators without sacrificing convenience for others.
- Perfect for public access copiers (libraries, etc.) that require Section 508 compliance.
- Angled consoles also help reduce glare.

Adjustable Control Panels

With this fully adjustable arm, customers are able to adjust the screen on their DC250, 76xx, or 77xx to accommodate wheelchairs or glare. By lowering or raising the screen, the operators can experience greater visibility and access.

Adjustable Control Panels are perfect for public access copiers (libraries, etc.).

Please call CAS for availability and pricing on specific machines.

Braille Labels

These pressure sensitive labels allow the Customer Service Engineer or customer to add Braille to almost any copier control console. For some copiers, Braille abbreviations fit right onto or next to the number and feature buttons. For others, a large Braille legend is affixed to the document handler to provide a map of the console layout. These labels are most effective when used on copiers with individual feature selection buttons. (Not recommended for touch screens).

Product Families

Use the table below to identify the availability of CAS solutions for your Section 508 requirements.
