

Secure Print Management For Modern Healthcare.

Ensuring Security, Compliance, and Efficiency in Epic and Cerner Environments with Xerox® Workplace Solutions

Healthcare organizations, particularly those using Epic or Cerner systems, face significant challenges in managing sensitive patient data within their print environments. These institutions require a secure and compliant way to manage print workflows, especially considering the high privacy standards mandated by regulations like HIPAA.

Without a robust print management solution, there is an increased risk of sensitive patient information being accessed by unauthorized personnel, as documents may remain unattended on the output tray. Additionally, the lack of centralized print tracking and auditing can hinder operational efficiency and make it difficult to monitor usage or detect potential breaches.

SOLVING SECURITY AND WORKFLOW ISSUES

Xerox® Workplace Solutions is designed to integrate seamlessly with healthcare infrastructure, including EPIC* and Cerner*, ensuring that print management meets both security and operational needs.

By holding print jobs in a secure queue, Xerox® Workplace Solutions prevents unauthorized access, ensuring that only the intended user can release sensitive documents. The solution also offers the flexibility to release jobs together, whether sent from mobile, PC, or mainframes, providing healthcare professionals with the convenience of accessing print resources sent from various platforms.

The system's comprehensive audit trail capabilities allow for detailed tracking of all print activities, including who printed what, when, and where—essential for compliance and security monitoring.

*Currently available in Xerox® Workplace Suite and soon available in Xerox® Workplace Cloud.

KEY BENEFITS FOR HEALTHCARE PROFESSIONALS

For healthcare professionals, Workplace Solutions delivers enhanced security and efficiency in managing print environments:

By minimizing the risk of unauthorized access to patient records, it supports regulatory compliance and reinforces patient confidentiality.

The ability to manage print jobs from multiple platforms and maintain an accurate audit trail ensures streamlined workflows and accountability across departments.

This not only reduces administrative burdens but also supports a more secure, efficient, and compliant healthcare environment, ultimately benefiting both healthcare providers and patients.
