

Solution for Supply Chain Optimization

The Xerox® Workflow Automation Solution for Supply Chain Optimization removes error-prone and costly manual steps from retail inventory management, helping to reduce labor costs, streamline invoice reconciliation, and improve fill rates.

Drive positive change in an increasingly competitive landscape.

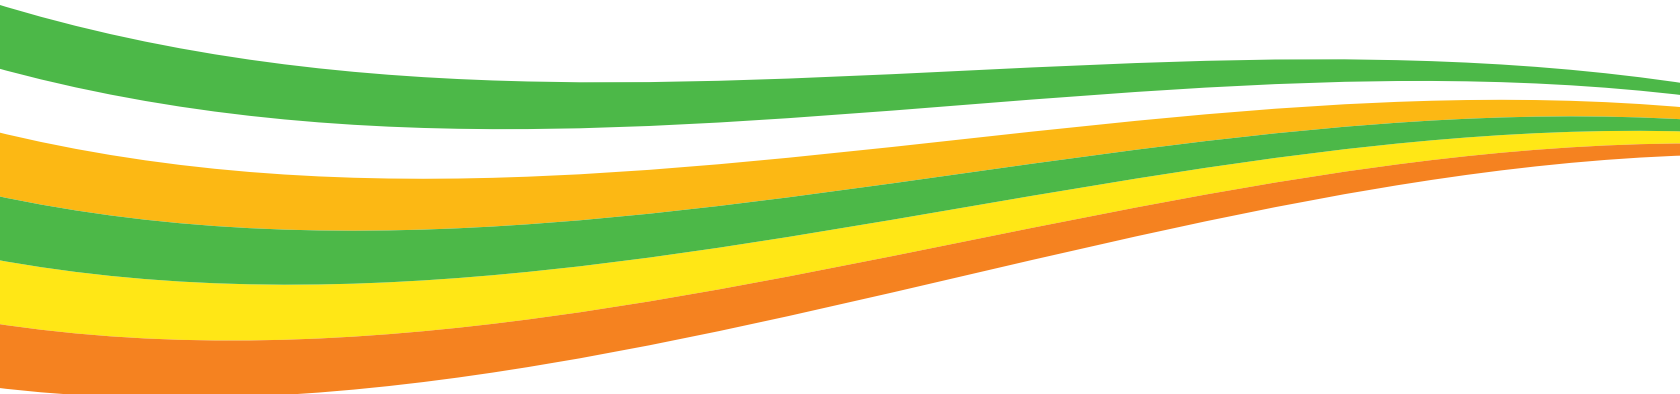

The retail industry is in the midst of a transformation. Retailers must find new ways to ensure sustainable growth and profitability, increase customer loyalty, improve end-to-end operational efficiency, and address labor dependencies.

Improve process efficiency and consistency across the entire retail supply chain.

The Xerox® Solution for Supply Chain Optimization takes report data from multiple, disconnected sources, digitizes and analyzes the information, and serves it up in easy-to-understand formats at the point of need. With the Xerox® solution you can:

- Reduce labor costs and stocking delays by automatically reconciling reporting data from manufacturers, distributors and retail stores
- Improve fill rates and reorder time through better supply chain insight
- Drive faster decision making across the entire supply chain with built-in feedback loops and alerts
- Enhance cash flow with faster, more accurate invoice reconciliation
- Reduce operational costs by printing less

With a streamlined and automated supply chain you can focus your attention and resources on what matters most – your customers.

More insight. More efficiency. Less paper.

Digitize Paper-Based Activities

With our solution for Supply Chain Optimization all hard-copy reports are digitized and stored electronically for easy filing, archiving and retrieving. The data can be viewed on tablets or mobile devices for maximum convenience and accuracy. Additionally, digitized data can be exported to other systems for further analysis, or introduced directly into the supply chain or inventory management workflow—cutting out paper usage and increasing process efficiency.

Analyze Data and Share Actionable Insights with Partners

Now you can more effectively deliver actionable insights to stakeholders throughout the supply chain, using the solution's digital dashboard and personalized reporting capabilities. Reports and outputs can flow into other systems and inventory management workflows. Our solution facilitates the reduction of time spent and human error rates when analyzing inventory data, which in turn helps with invoice reconciliation and cash flow.

Automate Labor-Intensive Process Steps

Through advanced automation using our solution reduces manual operations performed by back-office and administrative personnel. Information is automatically captured from multiple reports, and users can compare the results with other datasets right on the loading dock or retail floor. Exceptions or anomalies in the data automatically initiate a reconciliation process for review and resolution, and the graphical presentation helps direct attention and effort where it's needed.

Reduce Paper Usage and Cost

By digitizing the entire process, the amount of paper and the cost of printing are significantly reduced. With increased automation and more efficient data analysis capabilities, the time and labor required to reconcile inventories, identify issues and route analyses and recommendations through the supply chain are dramatically lowered. With fewer manual steps human error is almost completely eliminated, saving process time and improving process reliability.

Work with a knowledgeable team.

We at Xerox are knowledgeable about documents and workflows; we also know that your business is unique. Our engagement process includes qualitative and quantitative assessments to uncover your unique processes so we can deliver a best-of-breed solution for you. From initial engagement and design, to deployment and rollout, to training and ongoing support, Xerox will be with you every step of the way.

Supply Chain Optimized for Speed and Profitability

Inventory reports and shipment information received from multiple sources.

Information digitized and stored in a secure, globally-accessible location.

Analytics and reporting deliver actionable data across the entire supply chain.

Facilitates reduced labor costs, streamlined invoice reconciliation and improved fill rates.
