Material Safety Data Sheet

Manufacturer: Xerox Corporation
Rochester, N.Y. 14644

Emergency Tel. No.: (716) 422-2177
Information Tel. No.: (800) 828-6571
Transportation Emergency Telephone No.: (716) 422-1230

Section I - Product Identification

Trade Names/Synonyms: Copyflo II, Copyflo 24 Developer (Negative to Positive)
Part No.: 5R24, 5R53
Chemical Name: None

Ingredients

<table>

Section II - Emergency and First Aid

Eyes: Flush with water.
Skin: Wash with soap and water.
Inhalation: Remove from exposure.
Ingestion: Dilute stomach contents with several glasses of water.
Primary Route of Entry: Inhalation
Symptoms of Overexposure: Minimal respiratory tract irritation may occur as with exposure to large amounts of any non-toxic dust.
Medical Conditions Generally Aggravated by Exposure: None when used as described by product literature.
Additional Information: See Sections V and VII. Further information on file in Poisindex.

Section III - Toxicology and Health Information

This material has been evaluated by Xerox Corporation.

Oral LD₅₀: > 16 g/kg (Rats) practically non-toxic.
Dermal LD₅₀: > 3 g/kg (Rabbits) practically non-toxic.
Inhalation LC₅₀: > 8 mg/l (Rats, 4 hr exposure) practically non-toxic.
> 32 mg/l (calculated 1 hr exposure) non-poisonous, DOT.
Eye Irritation: Not an irritant.
Skin Sensitization: Not a sensitizer.
Skin Irritation: Not an irritant.
Human Patch: Non-irritating, non-sensitizing
Mutagenicity: No mutagenicity detected in Ames and WP₂ Assays.
Carcinogens: None present
Aquatic LC₅₀: > 500 mg/l (Fathead Minnows) non-toxic.

Additional Information: The information noted above is toxicity data for toner.
In a Xerox sponsored chronic inhalation study in rats using a special test toner, there were no lung changes at all in the lowest exposure level (1 mg/m³), the most relevant level to potential human exposures. A very slight degree of fibrosis was noted in 25% of the animals at the middle exposure level (4 mg/m³) while a slight degree of fibrosis was observed at the highest exposure level (16 mg/m³) in all animals. These findings are attributed to "lung overloading," a generic response to excessive amounts of any dust retained in the lungs for a prolonged interval. The special test toner was ten times more respirable than commercially available Xerox toner to comply with EPA testing protocol and would not function properly in Xerox equipment.
