### Additional Information

The information noted above is toxicity data for toner.

In a Xerox sponsored chronic inhalation study in rats using a special test toner, there were no lung changes at all in the lowest exposure level (1 mg/m³), the most relevant level to potential human exposures. A very slight degree of fibrosis was observed at the highest exposure level (16 mg/m³) in all animals. These findings are attributed to the inhalation of large amounts of any dust retained in the lungs for prolonged exposure. The special test toner was ten times more respirable than commercially available Xerox toner to comply with EPA testing protocol and would not function properly in Xerox equipment.

†This product contains a toxic chemical(s) subject to the reporting requirements of Section 313 of Title III of the Superfund Amendments and Reauthorization Act of 1986 and 40CFR Part 372. Based on testing similar xerographic toner materials. XEL - Xerox Exposure Limit
