Section III - Toxicology and Health Information

This material has been evaluated by Xerox Corporation.

Oral LD₅₀: >10 g/kg (rats) practically non-toxic.¹
Dermal LD₅₀: >2 g/kg (rabbits) practically non-toxic.¹
Inhalation LC₅₀: >5 mg/l (rats, 4 hr exposure) practically non-toxic.¹
>20 mg/l (calculated 1 hr exposure) non-poisonous, DOT.¹

Eye Irritation: Not an irritant
Skin Sensitization: Not a sensitizer.
Skin Irritation: Not an irritant.

Mutagenicity: No mutagenicity detected in Ames, CHO/SCE, CHO/HGPRT, and in vitro CHO Assays.
Carcinogens: None present

Aquatic LC₅₀: >500 mg/l (fathead minnows) non-toxic.

TLV: 10mg/m³ (total dust)
PEL: 15 mg/m³ (total dust)
STEL: None established
XEL²: 2.5 mg/m³ (total dust) Human

Additional Information: The information noted above is toxicity data for toner. In a Xerox sponsored chronic inhalation study in rats using a special test toner, there were no lung changes at all in the lowest exposure level (1mg/m³), the most relevant level to potential human exposures. A very slight degree of fibrosis was noted in 25% of the animals at the middle exposure level (4 mg/m³) while a slight degree of fibrosis was observed at the highest exposure level (16 mg/m³) in all animals. These findings are attributed to "lung overloading," a generic response to excessive amounts of any dust retained in the lungs for a prolonged interval. The special test toner was ten times more respirable than commercially available Xerox toner to comply with EPA testing protocol and would not function properly in Xerox equipment.
