

Conflict Minerals Report

**Xerox Corporation
For the Year Ended December 31, 2017**

This report for the year ended December 31, 2017 is made by Xerox Corporation and its subsidiaries (Xerox) in compliance with Rule 13p-1 under the Securities Exchange Act of 1934 (the Rule).

The Rule was adopted by the Securities and Exchange Commission (SEC) to implement reporting and disclosure requirements related to conflict minerals as directed by the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (Dodd-Frank Act). The Rule imposes certain reporting obligations on SEC registrants whose manufactured products contain conflict minerals that are necessary to the functionality or production of their products. Conflict minerals are defined as cassiterite, columbite-tantalite, gold, wolframite and their derivatives, which are limited to tin, tantalum, tungsten and gold (3TG). These requirements apply to registrants regardless of the geographic origin of the conflict minerals and whether or not the trading in those minerals benefits armed groups.

If a registrant has reason to believe that any of the conflict minerals in their supply chain may have originated in the Democratic Republic of the Congo (DRC) or an adjoining country (the Covered Countries), or a registrant is unable to determine the country of origin of those conflict minerals, then the registrant must exercise due diligence on the source and chain of custody of those conflict minerals. The registrant must annually submit a specialized disclosure (Form SD) and Conflict Minerals Report (CMR) to the SEC that includes a description of those due diligence measures.

1. COMPANY OVERVIEW

Xerox Corporation (Xerox) is a print technology and intelligent work solutions leader focused on helping people communicate and work better. We apply our expertise in imaging and printing, data analytics, and the development of secure and automated solutions to help our customers improve productivity and increase client satisfaction. In 2017, Xerox's products included but were not limited to multifunction printers/copiers, scanners, and multifunction/all in one printers, digital printing equipment, production printers & digital presses, continuous feed printers, wide format printers and consumables (e.g., toner cartridges). Xerox products are more fully described on our Xerox website, which can be accessed at www.xerox.com

The content of any website referred to in this CMR is included for general information only and is not incorporated by reference in this Report.

2. OUR CONFLICT MINERALS PROGRAM

2.1 Supply Chain - Reasonable Country of Origin Inquiry

Xerox is many steps removed from the mining of conflict minerals. The origin of conflict minerals cannot be determined with any certainty once the raw ores are smelted, refined and converted to ingots, bullion or other conflict mineral containing derivatives. The 3TG smelters or refiners are consolidating points for raw ore and are in the best position in the total supply chain to know the origin of the ores. Xerox has conducted an analysis of our products and found that, although we do not directly purchase conflict minerals from our suppliers, Xerox purchases products, component parts and materials that contain metals, some of which contain conflict minerals. We rely on our Tier 1 suppliers to provide information on the origin of the conflict minerals contained in components that are included in our products by using the RMI Conflict Minerals Reporting Template (CMRT), which allows us to perform our Reasonable Country of Origin Inquiry (RCOI).

2.2 Supplier Risk Assessment

Because of the size of our company, the complexity of our products and the depth and breadth of our supply chain, it is difficult to identify sources upstream from our direct suppliers. As a result, Xerox conducted a product review to determine products in scope and developed a supplier risk assessment process, through which the conflict minerals program is implemented, managed and monitored. With a goal of targeting 3TG minerals, this risk assessment process was developed to identify those suppliers whose products may contain the presence of tin, tantalum, tungsten and gold.

We conducted a survey of these suppliers to determine whether the conflict minerals in components contained in our products originated from the DRC or adjoining countries. This supply-chain survey was conducted with our Tier 1 production suppliers using the CMRT, which contains questions about the facilities used to process these minerals, as well as supplier RCOI. The goal of this activity was to identify, where applicable, the 3TG smelters or refiners who contribute refined conflict minerals to Xerox components, assemblies and Original Equipment Manufacturer (OEM) Products. The CMRT was developed to facilitate disclosure and communication of information regarding smelters or refiners that provide material to a company's supply chain. It includes questions regarding a company's conflict-free policy, engagement with its direct suppliers, and a listing of the smelters or refiners the company and its suppliers use. Our supplier survey request also included the Responsible Minerals Initiative (RMI), formerly Conflict Free Sourcing Initiative (CFSI), informational links on available conflict mineral and smelter information. In 2017, Xerox surveyed 306 suppliers with a 62% response rate, estimated to represent over 50% of our 2017 spend with production suppliers.

The responses contained varying degrees of information regarding the names and locations of 3TG smelters or refiners which process necessary conflict minerals used by our suppliers, which are ultimately incorporated into our products. We have designed and adopted a risk management plan that summarizes our risk mitigation efforts. Under our risk-assessment process, we perform due diligence reviews of supplier responses for their use of 3TG and conduct follow-up actions on suppliers, encouraging further requests for accurate, complete or missing template information where responses identified red flags based on our risk assessment of the level of risk of the commodities supplied to us.

In 2017, we continued to refine our process of evaluating the CMRTs to assist with our ongoing risk assessment by analyzing supplier responses and providing feedback to suppliers on errors and corrections. We also provide a hot-line for supplier communication. In addition, we provide monthly reports and systematic management reviews to our senior management and elevate non-responsive issues as necessary.

2.3 Company Management Systems

Policy

Xerox has adopted a company policy which is posted on our website under Supplier Governance - Conflict Minerals at www.xerox.com/en-us/about/supplier-relations/governance.

Internal Team

Xerox has established a management system for conflict minerals. Our management system includes a Senior Management Steering Committee sponsored by the Chief Delivery Officer, who reports directly to our CEO and who is responsible for signing the Form SD, as well as senior executives from Global Procurement, Environment Health Safety & Sustainability, and Legal. Our team of functional subject matter experts is responsible for implementing our conflict minerals compliance strategy. Senior management is provided with updates on the program and results of our conflict minerals program efforts on a regular basis.

2.4 Control Systems

Controls include, but are not limited to, our Code of Business Conduct for our employees, our Supplier Code of Conduct (adopted from the Responsible Business Alliance (RBA), formerly Electronic Industry Citizenship Coalition (EICC), code of conduct) and a conflict minerals contract clause incorporated in our Multi-National Master Purchasing Agreement for new contracts.

Xerox worked with the RBA in the early stages to support the RMI and continues to be a member of the RMI, a group assisting in the development of tools and processes to improve conflict minerals due diligence, which is an RBA and Global eSustainability initiative. As outlined in the Organization for Economic Co-operation and Development (OECD) Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas, 3RD Edition, (OECD 2016), which is the internationally recognized standard on which our company's system is based. We support the RMI, an industry initiative that audits smelters' and refiners' due diligence activities. The data on which we relied for certain statements in this declaration was obtained through our membership in the RMI, using the RMI Compliant Smelter Sourcing Information Report created specifically for Xerox.

In addition, our current standard supplier contracts also require our suppliers to adopt a policy on the responsible sourcing of minerals, implement due diligence processes to support that policy, and complete and return to Xerox the RMI CMRT.

2.5 Grievance Mechanism

We have multiple longstanding grievance mechanisms whereby employees and suppliers can report violations of Xerox

policies. This is communicated annually in our employee code of ethics training process and the supplier ethics letter. This mechanism helps us to identify and assess risk.

3. DUE DILIGENCE

3.1 Design of Due Diligence

Xerox designed its due diligence measures to be in conformity, in all material respects, with the nationally or internationally recognized due diligence framework in the OECD 2016.

3.2 Smelter or Refiner Results*

Our due diligence process includes participation in RMI and following the OECD implementation framework. We requested that our suppliers complete the CMRT survey in order to obtain information about 3TG smelters or refiners in our supply chain. We have determined that these actions represent the most reasonable effort we can make to determine the mines or locations of origin of the 3TG in our supply chain.

The majority of survey responses provided smelter and refiner data, although some responses did not completely list all the smelters or refiners used in their supply chain. We analyzed and compared all the 3TG smelter and refiner data we received against information obtained from the RMI smelter database. For the calendar year 2017, our due diligence identified 405 smelters and refiners as potential sources of 3TG minerals that were reported to be in our supply chain.

In order to provide compliance status, we completed further analysis of the 405 smelters and refiners, of which 252 have been certified as conflict-free compliant by the RMI approved program. An additional 56 are known to be legitimate smelters whom the RMI outreach program is working to engage in their audit program, but have yet to be certified. Six additional smelters were determined to be “non-compliant” to the RMI audit protocol. Of these five smelter did not complete re-audit / corrective action plans within the required timeframe. Additionally one was assessed as non-compliant after review of their audit submission. We will advise our supply chain accordingly. The remaining 91 are alleged smelters which have been allocated a Smelter Identification CID number and are awaiting validation through the RMI audit program.

*Note: The data above was obtained from the non-public (member only access) RMI Data Exchange Forum as of 12/31/2017.

Smelters or refiners verified as conflict-free or in the audit process**

**Note: RMI compliance results are as of 12/31/2017 (available at <http://www.conflictreesourcing.org>).

	2014	2015	2016	2017
Tantalum	34 of 45 (75%)	47 of 55 (85%)	47 of 53 (89%)	41 of 45 (91%)
Tin	51 of 253 (20%)	84 of 172 (49%)	82 of 152 (54%)	79 of 129 (61%)
Tungsten	32 of 51 (63%)	43 of 60 (72%)	43 of 49 (88%)	45 of 51 (88%)
Gold	71 of 206 (34%)	129 of 176 (73%)	139 of 183 (76%)	143 of 180 (79%)
Total	188 of 555 (34%)	303 of 463 (65%)	311 of 437 (71%)	308 of 405 (76%)

4. DETERMINATION

The information received from our due diligence efforts from suppliers or other sources is not sufficient to determine the

origin of all 3TG our products contain, whether the 3TG come from recycled or scrap sources, the facilities used to process them, their country of origin, or their mine or location of origin. We have found no reasonable basis for concluding that these refiners, or the other smelters preparing to be audited, sourced 3TG minerals that directly or indirectly finance or benefit armed groups of the conflict region of the Covered Countries.

Based on the information provided by our suppliers, we believe that the facilities that may have been used to process the 3TG minerals in our products include the RMI compliant smelters listed in Appendix I below. Based on our due diligence efforts, we do not have sufficient information to conclusively determine the countries of origin of the 3TG minerals in our products or whether the 3TG minerals in our products are from recycled or scrap sources. However, based on the information provided by our suppliers, as well as from the RMI and other sources, we believe that the countries of origin of the 3TG minerals contained in our products include the countries listed in Appendix II below as well as recycled and scrap sources. Pursuant to the Rule, this report is not subject to an independent private sector audit.

Through our participation in the RMI, we continue to support independent third party audits through the RMI or other third party certification schemes.

In accordance with the OECD Guidance and the Rule, this CMR is available on our website under Supplier Governance - Conflict Minerals at www.xerox.com/en-us/about/supplier-relations/governance.

5. STEPS TO BE TAKEN IN 2018 TO MITIGATE RISK

Xerox plans to undertake the following steps during 2018 to improve the due diligence conducted in order to further mitigate the risk that the necessary conflict minerals in our products do not benefit armed groups in the DRC or adjoining countries, including:

- Continue to strengthen engagement with relevant suppliers and to provide training, as appropriate, to help them understand and satisfy Xerox requirements related to 3TG minerals under the Rule.
 - Review process with distributors submitting CMRT's and develop best practices in obtaining 3TG mineral data.
 - Continue using internal escalation process within our supply chain organization when working with suppliers to obtain required information.
 - Review third party programs to further improve our conflict mineral process in obtaining accurate and complete information about smelters/refiners.
 - Continue to provide ongoing feedback to suppliers on errors and corrections required in connection with the CMRT assessment.
 - Notify supplier of non-compliant smelter within their supply chain
 - Continue to participate as a member in the RBA and the RMI, including Conflict Free Smelter Program smelter validation and supplier outreach.
 - Continue to work with the OECD and relevant trade associations to define and improve best practices and build leverage over the supply chain in accordance with the OECD Guidance.
-
