

# Quick, Flexible Integration of Xerox® DocuShare® with Enterprise Applications

## Application Connector

The Application Connector lets you instantly access critical, relevant documents directly from key front- and back-office applications, further enabling them so you get the most out of your technology investment.

The Application Connector is a professional services add-on to the **Xerox® DocuShare** and to **Xerox® DocuShare Flex** Content Management Platforms, enabling access to documents, images, or other business content from virtually any third-party line-of-business or enterprise application.

### SIMPLE INTEGRATION WITH BUSINESS APPLICATIONS

The Application Connector allows people to access documents from the applications they work in most, saving time and building efficiency.

It links to DocuShare content from a wide variety of applications, including:

- **Customer relationship management (CRM)** such as Microsoft Dynamics, Salesforce, Oracle Siebel
- **Enterprise resource planning (ERP)** such as Oracle NetSuite or PeopleSoft
- **Human resource management systems (HRMS)**
- **Finance and accounting systems** such as Oracle Government Financials
- **Many line-of-business applications** like DocuSign, Cerner, KRIS, or Oracle Tutor.

### HOW THE APPLICATION CONNECTOR WORKS

The Application Connector allows third-party line-of-business application programmers to construct and display a link within an application that searches for and returns specific content from a DocuShare site (for example, a Human Resources application record linking to documents).

DocuShare content is found using criteria from the external application and is displayed in a browser window so that an application can link into DocuShare in the context of a specific record or business process.

#### For example:

- A finance application may link to an invoice document that is associated with a purchase order number or other data.
- An operations manager might search the ERP system for all orders, receipts, or invoice documents for a supplier, opening a DocuShare window with multiple documents

### REQUIREMENTS

Professional services by Xerox or by an expert partner are required to configure DocuShare or DocuShare Flex with the Application Connector.

### SIMPLE SETUP

The Application Connector is easily set up without requiring a long or complex implementation or significant investment in developer or IT resources.

### UPGRADE THE WAY YOU UPLOAD

Uploads shouldn't slow you down, and with the new Document Uploader Page, they've never been easier or faster. This intuitive feature makes it simple to drag and drop files directly into the designated DocuShare collection from your Enterprise Applications. Users will be automatically prompted to fill in the required information fields before upload commences; once done, all documents are then transferred and saved to DocuShare.
