Xerox® Managed Print Services for U.S. Federal Government

More than half of government and education cloud adopters surveyed are evaluating cloud solutions as part of their overall IT strategy. The remaining cloud users surveyed are considering cloud solutions for specific applications.*

Xerox® Managed Print Services for U.S. Federal Government helps you manage your agency’s document processes, reduces costs and increases efficiencies by delivering services using the cloud.

**IMPROVE PRODUCTIVITY, MEET NEW STANDARDS AND MITIGATE RISK.**

Government agencies struggle with mountains of paper and miles of processes, while also driving to become a more digital government that meets new standards and expectations.

With so many challenges putting pressure on government, it’s easy to overlook the opportunities in your paper-intensive work processes. Xerox® Managed Print Services for U.S. Federal Government uses a secure FedRAMP (Federal Risk and Authorization Management Program)-authorized cloud to streamline your processes and improve employee efficiency. Risk and cost are better managed, and service delivery and productivity improve.

**XEROX® MANAGED PRINT SERVICES FOR U.S. FEDERAL GOVERNMENT:**

- First FedRAMP-authorized, industry-leading managed print services solution delivered through a cloud-hosted service provider.
- FedRAMP benefits include standardized security assessment, authorization and continuous monitoring, which eliminates the time and staff required to conduct redundant agency security assessments.
- SIPRNet token authorization to share information classified as “Secret” or below as well as protect unauthorized access.
- Proven capability to implement the largest and most complex federal government managed print services projects.

**FEDRAMP AUTHORIZATION MAKES PRINTING SECURE.**

Ninety percent of federal IT security officials surveyed feel vulnerable to security threats with 61% of those already experiencing a data breach.**

Pressure is on government leaders to move more capacity and functionality to the cloud. The Federal Risk and Authorization Management Program (FedRAMP) is intended to reduce or eliminate barriers by providing standardized security assessment, authorization and continuous monitoring for cloud services and products. Using a standardized solution saves the time and staff required to conduct redundant agency security assessments.

“We wanted to use our new space to transform the work environment and better meet the demands of an increasingly digital and virtual workforce.”

—Mark Newcastle
Publishing Council
U.S. Department of the Interior

Greater productivity.
Focused workers.
With FedRAMP-authorized cloud delivery, Xerox can help you securely manage your print services. The full portfolio of Xerox Managed Print Services capabilities and tools can now be delivered to federal government agencies through a FedRAMP-authorized Cloud Services Provider (CSP).

Xerox Managed Print Services for U.S. Federal Government optimizes your print infrastructure for both Xerox and non-Xerox devices. Xerox provides industry-leading multifunction device functionality while saving agencies up to 20% on document-related costs.

In addition to FedRAMP-authorized safeguards, Xerox can help prevent unauthorized access to the SIPRNet, a system of interconnected computer networks used by the U.S. Department of Defense and the U.S. Department of State to transmit information classified as “Secret” or below.

And, your agency or department directly benefits from greater automation and productivity. Through the cloud environment, device and service management technology transmits data regarding automated device service alerts and automated supplies and meter reads. This automated, proactive management reduces costs, improves performance quality and uptime, and provides you with the ability to identify all devices, how they are being used, and the data required to optimize and right size the number of devices needed.
