Five-hundred petabytes—five-hundred million gigabytes—of patient healthcare data currently exist, which will soon reach the zettabyte scale.* Fortunately, most electronic medical records (EMRs) can successfully manage the structured information, but even the best systems can’t handle the unstructured content originated outside of it.

Clinicians need all of a patient’s information to make an informed care decision, and that means the unstructured content like paper documents, faxes, images and photos as well. Without access to all patient information, patient safety can be at risk. Xerox® Workflow Automation Solution for Integrated Electronic Health Records unifies disparate systems to achieve true electronic health record (EHR) integration. Clinicians will have the tools to spend less time searching for patient data and more time providing quality care.

**A streamlined process to create a more connected, efficient healthcare enterprise.**

Xerox® Workflow Automation Solution for Integrated Electronic Health Records reduces clinicians having to go to a paper chart or navigate through multiple applications to find important patient data. Instead, you can have a paperless, efficient system of records where information is accessed when, where and how your staff needs it.

“Having records online with the solution enables physicians to crunch the process time and spend more time with people. This empowers patients to comment during the visit and provide more information, which contributes to better care.”

—Robert S. Juhasz, D.O., Associate Medical Director, Cleveland Clinic
Achieve your goal of fully electronic medical records.

**Integrate with your existing systems.**
Whether you have Allscripts, Epic, Meditech, GE Centricity, NextGen, McKesson, Cerner, eClinical Works or another electronic medical record (EMR) system, Xerox® Workflow Automation Solution for Integrated Electronic Health Records will integrate seamlessly and complement your EMR platform to establish a more comprehensive electronic medical record. You’ll also fulfill your electronic health record (EHR) strategy while extending the value of core health information technology (HIT) applications throughout your healthcare enterprise.

**All data forms. All in one place. Without leaving your EMR.**
Xerox® Workflow Automation Solution for Integrated Electronic Health Records provides a platform for all information to be kept in the same location, including insurance cards, consent forms, emergency care records, consultation and discharge notes and more. Clinicians can pull any image, video, photo or report into the EMR as well as obtain an encounter, longitudinal and personalized view of the patient window. This results in one location for multiple content sources, supporting better care decisions.

**Access healthcare records from anywhere, anytime.**
Not only can clinicians use a desktop or laptop to access patient records, but they can also use a tablet or smartphone. Plus, the solution reaches beyond simple data exchange to collaborate and share information regardless of location or facility, vendor or machine and file type or origin. Clinicians and staff will have easy and immediate access to the information they need at the moment (and in the context) they need it for complete interoperability. After all, emergency surgery isn’t something you can postpone until someone locates an insurance form.

**Support your compliance efforts.**
The integrated electronic health record created becomes your patient record. Even better, the solution utilizes native business process automation tools to streamline workflow. This creates not only a more connected healthcare enterprise, but a more efficient one to access information for your compliance efforts.

**Customer Story: Cleveland Clinic realizes local and global interoperability with ECM-EMR integration.**
One of the top hospitals in the U.S. wanted to make its clinical documents available through the Epic EMR and give physicians access to patient documents during referrals. This large health system with 50,000 hospital administrators, 3.3 million patients and 60 facilities turned to this solution.

Two key lessons were learned: centralized scanning improves quality and reduces manual administrative costs, and creating a governance committee is important to establishing enterprise standards and prioritizing projects. With 22,800 users, 1.9 million documents are now viewable through Epic and that number is growing fast. Now physicians can focus their attention on spending time with patients and making the best decisions, not trying to locate paper records.

**Xerox® Workflow Automation Solution for Integrated Electronic Health Records**
Consolidates medical records into a centralized system for immediate access—and better patient care decisions.

- Solution integrates with existing systems
- Information is consolidated for more complete electronic patient records
- All records stored securely in centralized location
- Information is accessible anytime, anywhere via computer or mobile device
