

# Recommended Xerox Media for Phaser 7100 (USA and Canada)

For use in the US and Canada

Version 1.0, Publish Date: September 2012

## Important Notes:

All media is listed by product, machine run mode, weight (standard gsm), re-order number, size, and tray runability. The additional information column is for hints and tips on how to run certain media applications.

Media recommendations made in this publication are based on qualification tests\* conducted using standard test images with moderate to heavy image area coverage. Test duration for each product/media type is based on the suggested machine monthly copy/print volume. Test machines are maintained within specifications defined by user documentation.

\* Testing Environment temperature range of 60-75 deg. F, Relative Humidity range 20-40%.

\*Machine reliability specifications may be affected by increased usage of the Transparency, Card Stock, Label, and Special modes. In addition, variances in machine reliability may occur due to extended use of some media types. Your Xerox service representative can advise you on special application media types for long duration copy/print runs.

For specifications and a description of the various media types discussed in this publication, please refer to [www.Xerox.com](http://www.Xerox.com).

For additional recommended Phaser media, look under Supplies on: <http://www.office.xerox.com/> and select your Product Family.

Gloss variation can occur from machine rolls on high coverage, solid fill prints; if so, adjust the fuser temperature, reduce coverage, or try a different paper.

Tray 1 or Tray 2 may reduce jam issues or improve pick performance seen with the bypass tray.

High humidity may cause misfeeds or multifeeds.
