Summary Table – Voluntary Product Accessibility Template (VPAT)

Criteria	Supporting Features	Remarks and explanations
Section 1194.21 <a href="#">Software Applications and Operating Systems</a>	Some limitations exist	XSP is compliant with minor exceptions concerning the keyboard, bitmaps and support of Assistive Technology.
Section 1194.22 <a href="#">Web-based internet information and applications</a>	Some limitations exist	XSP is compliant with minor exceptions concerning text equivalents, color, markup and support of Assistive Technology.
Section 1194.23 Telecommunications Products	Not applicable	XSP is a web application and not a telecommunications product.
Section 1194.24 Video and Multi-media Products	Not applicable	XSP is a web application and not a video or multi-media product.
Section 1194.25 Self-Contained, Closed Products	Not applicable	XSP is a web application and does not fit the definition of a self-contained, closed product.
Section 1194.26 Desktop and Portable Computers	Not applicable	XSP is a web application and is not sold with a PC or workstation.
Section 1194.31 <a href="#">Functional Performance Criteria</a>	Supports	XSP is compliant with Rule 1194.31.
Section 1194.41 <a href="#">Information, Documentation, and Support</a> (Added by Xerox) This rule covers accessibility of documentation, training and support for IT products. Xerox includes rule 41 in all its assessments.	Supports	The centralization of documentation, training, and support services for most Xerox products allows us to achieve compliance across the corporation.

Criteria	Supporting Features	Remarks and explanations
(a) When software is designed to run on a system that has a keyboard, product functions shall be executable from a keyboard where the function itself or the result of performing a function can be discerned textually.	Some limitations exist	Some commands that can be described textually cannot be executed from the keyboard.
(b) Applications shall not disrupt or disable activated features of other products that are identified as accessibility features, where those features are developed and documented according to industry standards. Applications also shall not disrupt or disable activated features of any operating system that are identified as accessibility features where the application programming interface for those accessibility features has been documented by the manufacturer of the operating system and is available to the product developer.	Supports	The product software does not override or disable accessibility features of the host operating system or other software possessing features that have been developed and documented according to industry standards.
(c) A well-defined on-screen indication of the current focus shall be provided that moves among interactive interface elements as the input focus changes. The focus shall be programmatically exposed so that Assistive Technology can track focus and focus changes.	Supports	A well defined, on-screen indication of the current focus is provided, and the focus is programmatically exposed so that Assistive Technology can track focus and focus changes.
(d) Sufficient information about a user interface element including the identity, operation and state of the element shall be available to Assistive Technology. When an image represents a program element, the information conveyed by the image must also be available in text.	Some limitations exist	The program code does not make available the identity, operation, and state of some or all of the program's user interface elements to Assistive Technology.

Criteria	Supporting Features	Remarks and explanations
(e) When bitmap images are used to identify controls, status indicators, or other programmatic elements, the meaning assigned to those images shall be consistent throughout an application's performance.	Some limitations exist	Bitmap image meanings change throughout the application.
(f) Textual information shall be provided through operating system functions for displaying text. The minimum information that shall be made available is text content, text input caret location, and text attributes.	Some limitations exist	Some or all textual information is not provided through operating system functions compatible with Assistive Technology.
(g) Applications shall not override user selected contrast and color selections and other individual display attributes.	Supports	The product software does not override user-selected contrast and color selections and other individual display attributes.
(h) When animation is displayed, the information shall be displayable in at least one non-animated presentation mode at the option of the user.	Not applicable	Animation is not used for control elements or relevant text.
(i) Color coding shall not be used as the only means of conveying information, indicating an action, prompting a response, or distinguishing a visual element.	Supports	The product software does not use color as the only means of conveying information.
(j) When a product permits a user to adjust color and contrast settings, a variety of color selections capable of producing a range of contrast levels shall be provided.	Not applicable	The application does not permit a user to adjust color and contrast settings.
(k) Software shall not use flashing or blinking text, objects, or other elements having a flash or blink frequency greater than 2 Hz and lower than 55 Hz.	Not applicable	
(l) When electronic forms are used, the form shall allow people using Assistive Technology to access the information, field elements, and functionality required for completion and submission of the form,	Some limitations exist	Electronic forms do not allow people using Assistive Technology to accurately complete and submit the forms.

Criteria	Supporting Features	Remarks and explanations
including all directions and cues.		

## Section 1194.22 Web-based Internet Information and Applications – Detail

[Back to top](#)

Criteria	Supporting Features	Remarks and explanations
(a) A text equivalent for every non-text element shall be provided (e.g., via "alt", "longdesc", or in element content).	Some limitations exist	Non-text elements, including audio, that are required for comprehension of content or to facilitate navigation are present, and text equivalents are not assigned.
(b) Equivalent alternatives for any multimedia presentation shall be synchronized with the presentation.	Not applicable	No multimedia presentations are included with the application.
(c) Web pages shall be designed so that all information conveyed with color is also available without color, for example from context or markup.	Some limitations exist	All information conveyed with color is not conveyed by alternative means.
(d) Documents shall be organized so they are readable without requiring an associated style sheet.	Some limitations exist	Web pages uses style sheets and cannot be read accurately by browsers that do not support style sheets and by browsers that have disabled the support for style sheets.
(e) Redundant text links shall be provided for each active region of a server-side image map.	Not applicable	No image maps with active regions are used.
(f) Client-side image maps shall be provided instead of server-side image maps except where the regions cannot be defined with an available geometric shape.	Not applicable	No image maps with active regions are used.
(g) Row and column headers shall be identified for data tables.	Supports	Row and column headers of data tables use appropriate tags according to the language used.
(h) Markup shall be used to associate data cells and header cells for data tables that have two or more logical levels of row or column headers.	Some limitations exist	Data cells and header cells are not associated using appropriate tags according to the language used.
(i) Frames shall be titled with text that facilitates frame identification and navigation	Some limitations exist	Frames do not possess labels that facilitate frame identification and navigation.
(j) Pages shall be designed to avoid causing the screen	Not applicable	

Criteria	Supporting Features	Remarks and explanations
to flicker with a frequency greater than 2 Hz and lower than 55 Hz.		
(k) A text-only page, with equivalent information or functionality, shall be provided to make a web site comply with the provisions of this part, when compliance cannot be accomplished in any other way. The content of the text-only page shall be updated whenever the primary page changes.	Not applicable	Alternative methods other than text-only pages are used to bring web pages into compliance. Or No text-only pages are provided.
(l) When pages utilize scripting languages to display content, or to create interface elements, the information provided by the script shall be identified with functional text that can be read by Assistive Technology.	Some limitations exist	Information provided by a scripting language is not supported by functional text and/or cannot be read by Assistive Technology.
(m) When a web page requires that an applet, plug-in or other application be present on the client system to interpret page content, the page must provide a link to a plug-in or applet that complies with §1194.21(a) through (l).	Not applicable	Plug-ins, applets, or other applications are not required to interpret page content.
(n) When electronic forms are designed to be completed on-line, the form shall allow people using Assistive Technology to access the information, field elements, and functionality required for completion and submission of the form, including all directions and cues.	Some limitations exist	No electronic forms are offered.
(o) A method shall be provided that permits users to skip repetitive navigation links.	Some limitations exist	A method is not provided that permits users with Assistive Technology to skip repetitive navigation links.
(p) When a timed response is required, the user shall be alerted and given sufficient time to indicate more time is required.	Not applicable	No time-out sensitive selections exist.

Note to 1194.22: The Board interprets paragraphs (a) through (k) of this section as consistent with the following priority 1 Checkpoints of the Web Content Accessibility Guidelines 1.0 (WCAG 1.0) (May 5 1999) published by the Web Accessibility

**Section 1194.31 Functional Performance Criteria – Detail**

[Back to top](#)

Criteria	Supporting Features	Remarks and explanations
(a) At least one mode of operation and information retrieval that does not require user vision shall be provided, or support for Assistive Technology used by people who are blind or visually impaired shall be provided.	Supports	All areas requiring user interaction provide at least one mode of operation and information retrieval that does not require user vision. Or The product does not require vision for user interaction. Or Support for Assistive Technology is provided.
(b) At least one mode of operation and information retrieval that does not require visual acuity greater than 20/70 shall be provided in audio and enlarged print output working together or independently, or support for Assistive Technology used by people who are visually impaired shall be provided.	Supports	All areas requiring visual user interaction with visual acuity better than 20/70 support screen enlargement and voice output or Assistive Technology. Or The product does not require vision for user interaction. Or No areas require visual user interaction with visual acuity better than 20/70.
(c) At least one mode of operation and information retrieval that does not require user hearing shall be provided, or support for Assistive Technology used by people who are deaf or hard of hearing shall be provided	Supports	No operations require user hearing. Or All areas requiring user interaction provide at least one mode of operation and information retrieval that does not require user hearing.
(d) Where audio information is important for the use of a product, at least one mode of operation and information retrieval shall be provided in an enhanced auditory fashion, or support for assistive hearing devices shall be provided.	Supports	Where audio information is important to use of the product, at least one mode of operation and information retrieval is provided in an enhanced auditory fashion. Or Support for assistive hearing devices is provided.
(e) At least one mode of operation and information retrieval that does not require user speech shall be provided, or support for Assistive Technology used by people with disabilities shall be provided.	Supports	No operations require speech. Or All areas requiring user interaction provide at least one mode of operation and information retrieval that does not require user speech.
(f) At least one mode of	Supports	No operations require fine motor control or simultaneous

Criteria	Supporting Features	Remarks and explanations
operation and information retrieval that does not require fine motor control or simultaneous actions and that is operable with limited reach and strength shall be provided.		actions. Or All areas requiring user interaction provide at least one mode of operation and information retrieval that does not require fine motor control or simultaneous actions and that is operable with limited reach and strength.

**Section 1194.41 Information, Documentation and Support - Detail  
(Xerox Addition to VPAT)**

[Back to top](#)

Criteria	Supporting Features	Remarks and explanations
(a) Product support documentation provided to end-users shall be made available in alternate formats.	Supports	Product support documentation is available in alternate format.  XSP documentation provided is: Feature content Release notes Readme  XSP training is available from Service Delivery upon demand.
(b) End-users shall have access to a description of the accessibility and compatibility features of products in alternate formats or alternate methods upon request, at no additional charge.	Supports	Accessibility and compatibility information is available on <a href="http://www.xerox.com/section508/">www.xerox.com/section508/</a> .
(c) Support services for products shall accommodate the communication needs of end-users with disabilities.	Supports	Xerox provides support services that accommodate the communication needs of end-users with disabilities.  XSP training is available from Service Delivery upon demand.

**What is the Voluntary Product Accessibility Template (VPAT)?**

The purpose of the Voluntary Product Accessibility Template is to assist Federal contracting officials in making preliminary assessments regarding the availability of commercial Electronic and Information Technology products and services with features that support accessibility. It is assumed that offerers will provide additional contact information to facilitate more detailed inquiries.

The first table of the Template provides a summary view of the section 508 Standards. The subsequent tables provide more detailed views of each subsection. There are three columns in each table. Column one of the Summary Table describes the subsections of subparts B and C of the Standards. The second column describes the supporting features of the product or refers you to the corresponding detailed table, "e.g., equivalent facilitation." The third column contains any additional remarks and explanations regarding the product. In the subsequent tables, the first column contains the lettered paragraphs of the subsections. The second column describes the supporting features of the product with regard to that paragraph. The third column contains any additional remarks and explanations regarding the product.

**User Tasks Assessed**

For the Xerox Product Name, general user tasks were assumed to be xxx, yyy, and zzz (e.g., programming and running jobs, unloading prints). According to the Federal Access Board, tasks such as xxx, yyy, and zzz (e.g., clearing jams, loading supplies, adding paper) are considered maintenance tasks and are not included in this summary.

## **Xerox Product Accessories for People with Disabilities**

---

Xerox is committed to making their products available to all. In addition to the award-winning Xerox Copier Assistant available for many products, Xerox provides additional accessories for people with disabilities; for example:

- Braille enablement – Pressure sensitive labels allow Braille to be added to almost any copier control console.
- Angled console – This kit, which is currently available for a number of models, inclines the copier console, allowing wheelchair users to view and reach the controls.
- Footswitch – An electrically operated switch which is available on many models, can be used to actuate the "Start Print" button.

For additional information on these and other accessories, contact your Xerox sales representative or call 1-800-ASK-XEROX (1-800-275-9376).
