More about the [Xerox iGen 5 Press](#)

Summary Table – Voluntary Product Accessibility Template (VPAT)

Criteria	Supporting Features	Remarks and explanations
Section 1194.21 Software Applications and Operating Systems	Supports	When printing, the drivers are resident on desktop and laptop computers, which allow adjustment of height of controls and text to speech (talk back) for Visually Impaired and Blind persons.
Section 1194.22 Web-based internet information and applications	Supports	The Xerox iGen 5 Press is compliant with Rule 1194.22.
Section 1194.23 Telecommunications Products	Not applicable	The Xerox iGen 5 Press is not a telecommunications product.
Section 1194.24 Video and Multi-media Products	Not applicable	The Xerox iGen 5 Press is not a video or multi-media product.
Section 1194.25 Self-Contained, Closed Products	Supports	When printing, the drivers are resident on desktop and laptop computers, which allow adjustment of height of controls and text to speech (talk back) for Visually Impaired and Blind persons.
Section 1194.26 Desktop and Portable Computers	Supports	The Xerox iGen 5 Press is compliant with Rule 1194.26.
Section 1194.31 Functional Performance Criteria	Supports	When printing, the drivers are resident on desktop and laptop computers, which allow adjustment of height of controls and text to speech (talk back) for Visually Impaired and Blind persons.
Section 1194.41 Information, Documentation, and Support (Added by Xerox) This rule covers accessibility of documentation, training and support for IT products. Xerox includes rule 41 in all its assessments.	Some limitations exist	The Customer Support Center for this product is not TTY or e-mail accessible however all documentation is available in readable PDF format.

Criteria	Supporting Features	Remarks and explanations
(a) When software is designed to run on a system that has a keyboard, product functions shall be executable from a keyboard where the function itself or the result of performing a function can be discerned textually.	Supports	When printing, the drivers are resident on desktop and laptop computers, which allow adjustment of height of controls and text to speech (talk back) for Visually Impaired and Blind persons.
(b) Applications shall not disrupt or disable activated features of other products that are identified as accessibility features, where those features are developed and documented according to industry standards. Applications also shall not disrupt or disable activated features of any operating system that are identified as accessibility features where the application programming interface for those accessibility features has been documented by the manufacturer of the operating system and is available to the product developer.	Supports	The software does not override or disable accessibility features of the host operating system or other software possessing features that have been developed and documented according to industry standards.
(c) A well-defined on-screen indication of the current focus shall be provided that moves among interactive interface elements as the input focus changes. The focus shall be programmatically exposed so that Assistive Technology can track focus and focus changes.	Supports	When printing, the drivers are resident on desktop and laptop computers, which allow adjustment of height of controls and text to speech (talk back) for Visually Impaired and Blind persons.
(d) Sufficient information about a user interface element including the identity, operation and state of the element shall be available to Assistive Technology. When an image represents a program element, the information conveyed by the image must also be available in text.	Supports	When printing, the drivers are resident on desktop and laptop computers, which allow adjustment of height of controls and text to speech (talk back) for Visually Impaired and Blind persons.
(e) When bitmap images are used to identify controls, status indicators, or other programmatic elements, the meaning assigned to those	Supports	Bitmap image meanings remain consistent throughout the application.

Criteria	Supporting Features	Remarks and explanations
images shall be consistent throughout an application's performance.		
(f) Textual information shall be provided through operating system functions for displaying text. The minimum information that shall be made available is text content, text input caret location, and text attributes.	Supports	All textual information is provided through operating system functions.
(g) Applications shall not override user selected contrast and color selections and other individual display attributes.	Supports	When printing, the drivers contrast can be controlled by the Operating System and text to speech (talk back) can be configured (Narrator) for Visually Impaired and Blind persons.
(h) When animation is displayed, the information shall be displayable in at least one non-animated presentation mode at the option of the user.	Supports	Animation is used for control elements or relevant text, and a non-animated option is available.
(i) Color coding shall not be used as the only means of conveying information, indicating an action, prompting a response, or distinguishing a visual element.	Supports	Color is not the only means of conveying information.
(j) When a product permits a user to adjust color and contrast settings, a variety of color selections capable of producing a range of contrast levels shall be provided.	Supports	A user can adjust color and contrast settings, and a variety of color selections are provided to produce a range of contrast levels.
(k) Software shall not use flashing or blinking text, objects, or other elements having a flash or blink frequency greater than 2 Hz and lower than 55 Hz.	Supports	The software does not use (avoids) flashing elements.
(l) When electronic forms are used, the form shall allow people using Assistive Technology to access the information, field elements, and functionality required for completion and submission of the form, including all directions and cues.	Supports	With respect to some controllers and drivers, electronic forms do not allow people using Assistive Technology to accurately complete and submit the forms.

Criteria	Supporting Features	Remarks and explanations
(a) A text equivalent for every non-text element shall be provided (e.g., via "alt", "longdesc", or in element content).	Supports	Non-text elements, including audio, that are required for comprehension of content or to facilitate navigation are present, and text equivalents are assigned.
(b) Equivalent alternatives for any multimedia presentation shall be synchronized with the presentation.	Not applicable	No multimedia presentations are included with the application.
(c) Web pages shall be designed so that all information conveyed with color is also available without color, for example from context or markup.	Supports	All information conveyed with color is also conveyed by alternative means.
(d) Documents shall be organized so they are readable without requiring an associated style sheet.	Not applicable	Web pages do not use style sheets.
(e) Redundant text links shall be provided for each active region of a server-side image map.	Not applicable	No image maps with active regions are used.
(f) Client-side image maps shall be provided instead of server-side image maps except where the regions cannot be defined with an available geometric shape.	Not applicable	No image maps with active regions are used.
(g) Row and column headers shall be identified for data tables.	Supports	Row and column headers of data tables use appropriate tags according to the language used.
(h) Markup shall be used to associate data cells and header cells for data tables that have two or more logical levels of row or column headers.	Supports	Data cells and header cells are associated using appropriate tags according to the language used.
(i) Frames shall be titled with text that facilitates frame identification and navigation	Supports	Frames possess labels that facilitate frame identification and navigation.
(j) Pages shall be designed to avoid causing the screen to flicker with a frequency greater than 2 Hz and lower than 55 Hz.	Supports	Pages do not use (avoid) flashing elements.
(k) A text-only page, with equivalent information or functionality, shall be provided to make a web site comply with the provisions of this part, when compliance cannot be	Not applicable	No text-only pages are provided.

Criteria	Supporting Features	Remarks and explanations
accomplished in any other way. The content of the text-only page shall be updated whenever the primary page changes.		
(l) When pages utilize scripting languages to display content, or to create interface elements, the information provided by the script shall be identified with functional text that can be read by Assistive Technology.	Supports	Information provided by a scripting language is identified with functional text that can be read by Assistive Technology.
(m) When a web page requires that an applet, plug-in or other application be present on the client system to interpret page content, the page must provide a link to a plug-in or applet that complies with §1194.21(a) through (l).	Not applicable	Plug-ins, applets, or other applications are not required to interpret page content.
(n) When electronic forms are designed to be completed on-line, the form shall allow people using Assistive Technology to access the information, field elements, and functionality required for completion and submission of the form, including all directions and cues.	Not applicable	No electronic forms are offered.
(o) A method shall be provided that permits users to skip repetitive navigation links.	Not applicable	No repetitive navigation links are provided.
(p) When a timed response is required, the user shall be alerted and given sufficient time to indicate more time is required.	Not applicable	No time-out sensitive selections exist.

Note on Rule 1194.22: The Board interprets paragraphs (a) through (k) of this section as consistent with the following priority 1 Checkpoints of the Web Content Accessibility Guidelines 2.0 (WCAG 2.0) (December 11, 2008) published by the Web Accessibility Initiative of the World Wide Web Consortium: Paragraph (a) - 1.1.1, (b) - 1.2.1/1.2.3, (c) – 1.4.1/1.4.3, (d) – 1.3.1/2.1.1/1.4.4, (e) – 2.1.1, (f) – 1.1.1, (g) – 1.3.1, (h) – 1.3.1, (i) – 2.4.1, (j) – 2.3.1, (k) - 4.1.2.

Criteria	Supporting Features	Remarks and explanations
(a) Self contained products shall be usable by people with disabilities without requiring an end-user to attach Assistive Technology to the product. Personal headsets for private listening are not Assistive Technology.	Supported	When printing, the drivers are resident on desktop and laptop computers, which allow adjustment of height of controls and text to speech (talk back) for Visually Impaired and Blind persons. This supplies a device which can use a standard Xerox print driver that supplies the ability through speakers or a headset to deliver the text-to-speech.
(b) When a timed response is required, the user shall be alerted and given sufficient time to indicate more time is required.	Not applicable	No time-out sensitive selections exist.
(c) Where a product utilizes touchscreens or contact-sensitive controls, an input method shall be provided that complies with §1194.23 (k) (1) through (4).	Supports	When printing, the drivers are resident on desktop and laptop computers, which allow adjustment of height of controls and text to speech (talk back) for Visually Impaired and Blind persons. No control or key on a desktop or laptop exceeds the 5 pound limit.
(d) When biometric forms of user identification or control are used, an alternative form of identification or activation, which does not require the user to possess particular biological characteristics, shall also be provided.	Not applicable	Biometric forms are not used.
(e) When products provide auditory output, the audio signal shall be provided at a standard signal level through an industry standard connector that will allow for private listening. The product must provide the ability to interrupt, pause, and restart the audio at anytime.	Supports	There is no auditory output from the text-to-speech out of the print driver that cannot be adjusted in volume. The mouse cursor passing over elements in the driver dialog causes the audio to repeat itself automatically.
(f) When products deliver voice output in a public area, incremental volume control shall be provided with output amplification up to a level of at least 65 dB. Where the ambient noise level of the environment is above 45 dB, a volume gain of at least 20 dB above the ambient level shall be user selectable. A function shall be provided to automatically reset the volume to the default level after every use.	Not applicable	There is no voice output.
(i) Color coding shall not be used as the only means of	Supports	Color coding and additional means of unique identification (e.g., text and symbols) are used.

Criteria	Supporting Features	Remarks and explanations
conveying information, indicating an action, prompting a response, or distinguishing a visual element.		
(h) When a product permits a user to adjust color and contrast settings, a range of color selections capable of producing a variety of contrast levels shall be provided.	Supported	Color selection and contrast of the print driver may be adjusted through the Operating System
(i) Products shall be designed to avoid causing the screen to flicker with a frequency greater than 2 Hz and lower than 55 Hz.	Supports	The flash rate of flashing elements does not fall between 2 Hz and 55 Hz.
(j) (1) Products which are freestanding, non-portable, and intended to be used in one location and which have operable controls shall comply with the following: The position of any operable control shall be determined with respect to a vertical plane, which is 48 inches in length, centered on the operable control, and at the maximum protrusion of the product within the 48 inch length on products which are freestanding, non-portable, and intended to be used in one location and which have operable controls.	Supports	All position measurements were performed against the specified vertical plane. Printing through a driver allows the desktop or laptop computer to be adjusted
(j)(2) Products which are freestanding, non-portable, and intended to be used in one location and which have operable controls shall comply with the following: Where any operable control is 10 inches or less behind the reference plane, the height shall be 54 inches maximum and 15 inches minimum above the floor.	Supports	Primary tasks require no operation of controls outside the limits from the plane or floor.
(j)(3) Products which are freestanding, non-portable, and intended to be used in one location and which have operable controls shall comply with the following: Where any operable control is more than 10 inches and not more than 24 inches behind the reference plane, the height shall be 46 inches	Not applicable	No primary tasks requires the use of an operable control that is more than 10 inches behind the reference plane.

Criteria	Supporting Features	Remarks and explanations
maximum and 15 inches minimum above the floor.		
(j)(4) Products which are freestanding, non-portable, and intended to be used in one location and which have operable controls shall comply with the following: Operable controls shall not be more than 24 inches behind the reference plane.	Supports	All operable controls are within specification.

Section 1194.26 Desktop and Portable Computers – Detail

[Back to top](#)

Criteria	Supporting Features	Remarks and explanations
(a) All mechanically operated controls and keys shall comply with §1194.23 (k) (1) through (4).	Supports	<p>Mechanically operated controls and keys comply with 1194.23 (k)(1) – (k)(4).</p> <p>The force required to activate controls is two ounces or greater, and buttons are discernible by shape, size, location, texture, or other physical attributes.</p> <p>Controls do not require simultaneous use of two hands, and the force to activate hand-operated controls is less than 5 pounds.</p> <p>Key repeat is supported, and the delay before repeat can be adjusted to 2 seconds or greater.</p> <p>Locking and toggle controls provide visual feedback and audio or tactile feedback.</p>
(b) If a product utilizes touchscreens or touch-operated controls, an input method shall be provided that complies with §1194.23 (k) (1) through (4).	Not applicable	The product does not use a touch screen.
(c) When biometric forms of user identification or control are used, an alternative form of identification or activation, which does not require the user to possess particular biological characteristics, shall also be provided.	Not applicable	Biometric forms are not used.
(d) Where provided, at least one of each type of expansion slots, ports and connectors shall comply with publicly available industry standards	Supports	Expansion slots, ports, and connectors comply with publicly available industry standards.

Criteria	Supporting Features	Remarks and explanationsj
(a) At least one mode of operation and information retrieval that does not require user vision shall be provided, or support for Assistive Technology used by people who are blind or visually impaired shall be provided.	Supports	Printing is performed with the use of a print driver that is run from a desktop or laptop PC. Use of furniture to adjust the height of this PC to allow placing it i
(b) At least one mode of operation and information retrieval that does not require visual acuity greater than 20/70 shall be provided in audio and enlarged print output working together or independently, or support for Assistive Technology used by people who are visually impaired shall be provided.	Supports	No areas require visual user interaction with visual acuity better than 20/70.
(c) At least one mode of operation and information retrieval that does not require user hearing shall be provided, or support for Assistive Technology used by people who are deaf or hard of hearing shall be provided	Supports	No operations require user hearing.
(d) Where audio information is important for the use of a product, at least one mode of operation and information retrieval shall be provided in an enhanced auditory fashion, or support for assistive hearing devices shall be provided.	Supported	Where audio information is required for use of the product, the print driver supplies API calls that allows the text-to-speech functions to work and enable visually impaired and blind persons to use the printing to work.
(e) At least one mode of operation and information retrieval that does not require user speech shall be provided, or support for Assistive Technology used by people with disabilities shall be provided.	Supports	No operations require speech.
(f) At least one mode of operation and information retrieval that does not require fine motor control or simultaneous actions and that is operable with limited reach and strength shall be provided.	Supports	When printing is being performed, the print driver is coded in such a manner to allow text-to-speech to function and general control this which

Criteria	Supporting Features	Remarks and explanations
(a) Product support documentation provided to end-users shall be made available in alternate formats.	Supports	Product support documentation is available in alternate format.
(b) End-users shall have access to a description of the accessibility and compatibility features of products in alternate formats or alternate methods upon request, at no additional charge.	Supports	Accessibility and compatibility information is available on www.xerox.com/section508/ .
(c) Support services for products shall accommodate the communication needs of end-users with disabilities.	Supports	Xerox provides support services that accommodate the communication needs of end-users with disabilities.

What is the Voluntary Product Accessibility Template (VPAT)?

The purpose of the Voluntary Product Accessibility Template is to assist Federal contracting officials in making preliminary assessments regarding the availability of commercial Electronic and Information Technology products and services with features that support accessibility. It is assumed that offerers will provide additional contact information to facilitate more detailed inquiries.

The first table of the Template provides a summary view of the section 508 Standards. The subsequent tables provide more detailed views of each subsection. There are three columns in each table. Column one of the Summary Table describes the subsections of sub-parts B and C of the Standards. The second column describes the supporting features of the product or refers you to the corresponding detailed table, "e.g., equivalent facilitation." The third column contains any additional remarks and explanations regarding the product. In the subsequent tables, the first column contains the lettered paragraphs of the subsections. The second column describes the supporting features of the product with regard to that paragraph. The third column contains any additional remarks and explanations regarding the product.

User Tasks Assessed

For the Xerox iGen5, general user tasks were assumed to be programming and running jobs. According to the Federal Access Board, tasks such as clearing jams, loading supplies, adding paper) are considered maintenance tasks and are not included in this summary.

Xerox Product Accessories for People with Disabilities

In addition to the award-winning [Xerox Copier Assistant](#) (not supported by this product), Xerox provides additional accessories for people with disabilities; for example:

- Braille enablement – Pressure sensitive labels allow Braille to be added to almost any copier control console.
- Angled console – This kit, which is currently available for a number of models, inclines the copier console, allowing wheelchair users to view and reach the controls.
- Footswitch – An electrically operated switch which is available on many models, can be used to actuate the "Start Print" button.

For additional information on these and other accessories, contact your Xerox sales representative or call 1-800-ASK-XEROX (1-800-275-9376).
