Welcome to your CDP Climate Change Questionnaire 2022

C0. Introduction

C0.1

(C0.1) Give a general description and introduction to your organization.

Xerox is a workplace technology company, building and integrating software and hardware for enterprises large and small. As customers seek to manage information across digital and physical platforms, we deliver a seamless, secure and sustainable experience. Whether inventing the copier, the Ethernet, the laser printer or more, Xerox has long defined the modern work experience and continues to do so with investments in artificial intelligence (AI), sensors and services for Internet of Things (IoT), digital packaging, 3-D printing and Clean Technologies (cleantech). Geographically, our footprint spans approximately 160 countries and allows us to deliver our technology and solutions to customers of all sizes, regardless of complexity or number of customer locations. Headquartered in Norwalk, CT, we have more than 23,300 employees.

We provide business process services, printing equipment, hardware and software technology for managing information - from data to documents.

Our business spans three primary offering areas: **Workplace Solutions, Graphics Communications and Production Solutions,** and **Xerox Services.**

Workplace Solutions includes the sales of entry and mid-range products and supplies, as well as the associated technical service and financing of those products. **Graphic Communications and Production Solutions (High-End)** are designed for customers in the graphic communications, in-plant and production print environments with high- volume printing requirements. Graphic Communications and Production Solutions includes the sale of xerographic and ink jet presses, software and supplies as well as the associated technical service and financing of these products. **Xerox Services** includes a continuum of solutions and services that helps our customers optimize their print and communications infrastructure, apply automation and simplification to maximize productivity, and ensure the highest level of security. Our primary offerings in this area are) and Digital Services offerings to help our customers accelerate their digital transformation.

In January 2021, we announced our intention to stand up our **Software, Financing** and **Innovation** organizations as separate and distinct businesses by 2022.

- The **Software** business will include a growing portfolio comprised of: DocuShare®, a cloud-based content management system; FreeFlowR, automation software for production print; XMPie, a multi-channel marketing software company; and CareAR, an enterprise augmented reality business Xerox acquired in late 2020.
- **FITTLE** (formerly XFS) is a global financing solutions business and currently offers financing for direct channel customer purchases of Xerox equipment through bundled lease agreements and lease financing to end-user customers who purchase Xerox equipment through our indirect channels.
- The **Innovation** business will include the scientists and engineers located in Palo Alto, CA.; Webster, NY; Cary, NC; and Toronto, Canada and will be named PARC Innovation. This team will be focused on incubating, productizing and commercializing disruptive technology aligned with our innovation focus areas such as 3D Printing and, Sensors and Services for the IoT, AI and clean tech.

Our manufacturing and distribution facilities are located around the world. Our largest manufacturing site is in Webster, N.Y., where we produce the Xerox iGen, Nuvera, and Baltoro printer systems, as well as key components and consumables for our products such as toner. We also have manufacturing operations in Dundalk, Ireland, for components, consumables and printer systems sustainable manufacturing, and in Wilsonville, OR, for solid ink consumables and components. Other Xerox manufacturing plants are located in Venray, Netherlands; Ontario, Canada; and Oklahoma City, OK, where we manufacture materials and components.

Additionally, we work with various manufacturing and distribution partners. This diversification of suppliers brings flexibility in our manufacturing and supply chain and supports our cost efficiency goals. Fujifilm Business Innovation Corp. is our largest partner, with whom we maintain product sourcing agreements for specific products across our entry, mid-range and high-end portfolios, some of which are the result of mutual research and development agreements. We also outsource certain manufacturing activities to FLEX LTD (Flex), a global contract manufacturer with whom we maintain a longstanding relationship, and we acquire products from various third parties in order to increase the breadth of our product portfolio and meet channel requirements

C0.2

(C0.2) State the start and end date of the year for which you are reporting data.

	Start date	End date	Indicate if you are providing emissions data for past reporting years
Reporting year	January 1, 2021	December 31, 2021	No

C0.4

(C0.4) Select the currency used for all financial information disclosed throughout your response.

USD

C0.5

(C0.5) Select the option that describes the reporting boundary for which climate-related impacts on your business are being reported. Note that this option should align with your chosen approach for consolidating your GHG inventory.

Operational control

C0.8

(C0.8) Does your organization have an ISIN code or another unique identifier (e.g., Ticker, CUSIP, etc.)?

Indicate whether you are able to provide a unique identifier for your organization	Provide your unique identifier
Yes, a Ticker symbol	XRX

C1. Governance

C1.1

(C1.1) Is there board-level oversight of climate-related issues within your organization?

Yes

C1.1a

(C1.1a) Identify the position(s) (do not include any names) of the individual(s) on the board with responsibility for climate-related issues.

Position of individual(s)	Please explain
Chief Executive Officer (CEO)	Board level responsibility for CSR, including climate related issues lies jointly between the CEO and the Corporate Governance Committee (CGC) of the Board of Directors. The CEO's climate-related responsibilities include: • Developing climate-related strategy, • Monitoring GHG targets • Considering climate-related issues when guiding business strategy, risk management policies and overseeing major capital expenditures, acquisitions, and divestitures

| | • Approving the release of climate-related information

As a board member, and leader of the Executive Management Committee (EMC), the CEO provides the day-to-day linkage between the board, the EMC and our management level CSR Council. The CSR Council reports to and advises the CEO. The CSR Council is chaired by a member of the Executive Committee, and the Chief Sustainability Officer serves as the Executive Staff Director of the CSR Council. This structure ensures that the business is held accountable for the CSR goals and ensures the CSR Council reflects real business input and requirements.

On an annual basis, the Chief Sustainability Officer is responsible for confirming the corporate CSR priorities with the CEO and Corporate Governance Committee of the board; presenting the results of the annual CSR materiality assessment and proposed action plan for Board approval; and providing the CEO and the Corporate Governance Committee of the board with a status of CSR progress and recommendations going forward. The CEO has frequent and available access to the Board, enhancing speed of implementation of decisions proposed by the CSR Council and approved by the Executive Management Committee. In 2020, the CEO and the Board made the decision to approve a proposal from the CSR Council that Xerox commit to becoming net zero carbon emitting by 2040, climate action that builds upon and goes beyond our recently approved science-based greenhouse gas targets. As part of increased commitment to climate action, the CEO and Board also approved the addition of ESG metrics into the executive bonus structure . |
| Board-level committee | Board-level responsibility for CSR, including climate related issues lies jointly between the CEO and the Corporate Governance Committee (CGC) of the Board of Directors. The Corporate Governance Committee (CGC) of the Board of Directors oversees significant shareholder relations issues and CSR matters, including climate change related risks and opportunities specifically.

Four members of the eight-member Board have knowledge and skills in climate change topics, such as risk management, and have held the title of Chief Operating Officer of companies that have reported on climate change-related risks and opportunities in the annual SEC 10-k filing.

On an annual basis, the Chief Sustainability Officer is responsible for confirming the corporate CSR priorities with the CEO and Corporate Governance Committee of the board; presenting the results of the annual CSR materiality assessment and proposed action plan for Board approval; and providing the CEO and the Corporate Governance Committee of the board with a status of CSR progress and recommendations going forward. In 2020, the Chief Sustainability officer and the CSR Council raised the need for increased climate action with the CEO and the Board, resulting in a commitment for Xerox Corporation to become net zero carbon by 2040, ten years ahead of the time frame called out by the Paris Agreement. In addition, the CSO and CSR Council effectively championed formally integrating |

		sustainability metrics into the executive bonus structure, expanding and aligning our corporate system of financial incentives to reach to the very top of the corporation.

C1.1b

(C1.1b) Provide further details on the board's oversight of climate-related issues.

Frequency with which climate-related issues are a scheduled agenda item	Governance mechanisms into which climate-related issues are integrated	Please explain
Scheduled – some meetings	Reviewing and guiding strategy Reviewing and guiding risk management policies	At least annually the Board conducts a review of the Company's long-term strategic plans and principal issues. Periodically during the year, the Board receives strategy updates from members of senior management of the Company. For example, annually, the Chief Sustainability Officer (and Executive Director of the CSR Council: • Confirms the corporate CSR (including climate related) priorities with the CEO and Corporate Governance Committee of the board; • Presents the results of the annual CSR materiality assessment and proposed action plan to the board for their approval; and • Provides the CEO and the Corporate Governance Committee of the board with a status of CSR (including climate related) progress and recommendations going forward. In 2019, the CSR Council approved the setting of science-based GHG targets (60% reduction of Scope 1 & 2 GHG emissions by 2030 from a 2016 baseline, and 35% reduction of Scope 3 emissions by 2030 from a 2016 baseline). In addition, the CSR Council commissioned the Xerox EHSS team to conduct a Climate Scenario Analysis to identify and prioritize climate-related risk for Xerox manufacturing facilities and key suppliers. This analysis is a qualitative, forward-looking climate scenario analysis using two scenarios (2°C and 4°C) and time frames extending out to 2050. The analysis was completed August 2020 and covers all Xerox manufacturing locations and key facilities, as well as critical supplier locations, and includes site-specific analysis against a range of potential climate-related

acute and long-term physical risks as well as transition risks. This findings from this qualitative analysis will serve as input to existing materiality, ERM and CSR Council processes.

In 2020, the CEO and the Board approved a proposal from the CSR Council to commit Xerox to net zero carbon by 2040, climate action that builds upon and goes beyond our recently approved science-based greenhouse gas targets.

The CEO and Board also approved the addition of CSR metrics into the executive bonus structure. Effective 2021, the Compensation Committee of the Board of Directors established an Environmental, Social and Governance payout modifier that allows the otherwise applicable performance-based payout to be increased or decreased by up to 10% of target with the result not to exceed 200% of target.

Our Enterprise Risk Management (ERM) process also strengthens our capability to assess, monitor and manage all categories of business risk. As a member of the ERM steering committee the Chief Sustainability Officer, is responsible for communicating to the ERM committee any significant risks that have been identified by our CSR Council, including climate-related. Results from the Climate Scenario Analysis will also feed any identified climate-related risks into the ERM process. Vital strategic and operational risks identified are approved by the Executive Management Committee (EMC) and reviewed annually by the Board.

C1.1d

(C1.1d) Does your organization have at least one board member with competence on climate-related issues?

	Board member(s) have competence on climate-related issues
Row 1	Not assessed

C1.2

(C1.2) Provide the highest management-level position(s) or committee(s) with responsibility for climate-related issues.

Name of the position(s) and/or committee(s)	Responsibility	Frequency of reporting to the board on climate-related issues
Chief Sustainability Officer (CSO)	Both assessing and managing climate-related risks and opportunities	Annually

C1.2a

(C1.2a) Describe where in the organizational structure this/these position(s) and/or committees lie, what their associated responsibilities are, and how climate-related issues are monitored (do not include the names of individuals).

The Chief Sustainability Officer (CSO) holds the highest-level management position with direct responsibility for assessing and managing climate related issues. The CSO reports to the Executive Vice President & General Counsel who reports to the CEO and Vice-Chairman of the Board.

In this position, the CSO is responsible for overseeing our environmental (including climate related) governance and leads coordination of the company's CSR activities, serving as Executive Staff Director of the CSR Council, communicating climate-related issues to the CEO and Board, and ensuring the implementation of climate related decisions made by the CSR Council and/or board.

The CSR Council is composed of senior leaders of functional organizations impacting CSR and chaired by the Chief Product Officer. Every functional area of the corporation is represented on the Council including procurement, environment and climate-related issues, health, safety, legal, supply chain, product development, delivery and R&D. The CSR Council has centralized oversight of the corporation's management approach, and meets quarterly to review the company's policies, goals, strategies, and actions to drive progress including GHG reduction and developments with potential CSR impacts. The developments reviewed may be either internal (e.g. new business model) or external (transitional such as proposed regulatory change or physical such as sea level rise). The Council determines the relevancy of the risks and opportunities to Xerox and if relevant, develops an action plan for review and approval by the Executive VP & General Counsel and subsequent approval by the CEO and Executive Management Committee (EMC).

Each CSR Council member is supported by individuals who have expertise and experience in each CSR topic area. An individual from the EMC chairs the CSR Council to provide direction and guidance, and ensures that the business is held accountable for the CSR goals and that the CSR Council reflects real business input and requirements. An individual from the EMC also participates in all CSR Council Meetings.

The CSO, with the CSR Council, makes climate-related decisions as a team and by consensus, but it is the CSO who is ultimately responsible for bringing the climate related issues or topics

to the CSR council for consideration, discussion, and approval. For example, when discussing how to achieve the company's renewable energy goal of 20% by 2020, the CSO was responsible for bringing that issue to the other CSR council members to gather their feedback and subsequently used their feedback to help obtain funding within the organization for initiatives to help achieve the goal.

The Environment, Health, Safety & Sustainability (EHS&S) group reports directly to the Chief Sustainability Officer. Therefore, it is appropriate that the CSO holds the highest level management position with direct responsibility for climate related issues as through the experience and expertise of the EHS&S group this individual is closer to climate related issues than any of the other CSR Council members.

The Chief Sustainability Officer monitors climate related issues through the CSR Council. The primary objective of the CSR Council is to continue our legacy of corporate citizenship and provide centralized oversight of the corporation's performance and management approach, including policies, goals, strategies and to recommend actions to drive progress and integrate CSR and climate related issues into existing business practices. This is achieved through:
· Working with the Corporate Compliance Office to assure demonstration of compliance with CSR related laws, regulations and policies;
· Annually evaluating the relevance of the corporations' CSR priorities using a materiality assessment process. Xerox's annual CSR materiality assessment process considers relevant CSR topics impacting Xerox products, services and operations, including energy, GHG emissions and climate change strategy;
· Identifying issues and opportunities and addressing them in a timely manner with responsible operations;
· Communicating Xerox's CSR initiatives, recognition and achievements internally and externally.

The CSR Council is also responsible for providing the chair of the CSR Council with a report on the CSR performance of the corporation (including climate related issues), such as progress in satisfying annual objectives, progress towards our corporate goals and recommended actions for further advancement. On an annual basis, the Chief Sustainability Officer (and Executive Director of the CSR Council) is subsequently responsible for confirming the corporate CSR priorities with the CEO and Corporate Governance Committee of the board; presenting the results of the annual CSR materiality assessment and proposed action plan to the board for their approval; and providing the CEO and the Corporate Governance Committee of the board with a status of CSR progress and recommendations going forward.

C1.3

(C1.3) Do you provide incentives for the management of climate-related issues, including the attainment of targets?

Provide incentives for the management	Comment

		of climate-related issues	
Row 1	Yes		Effective starting in 2021, Xerox Executives and the Board of Directors have been added to those eligible for climate-related management incentives. In 2020, the Compensation Committee of the Board of Directors established an Environmental, Social and Governance payout modifier that will increase or decrease the otherwise applicable performance-based payout for executive officers of the company. This incentive is in addition to already existing incentives available to a wide range of Xerox employees.

C1.3a

(C1.3a) Provide further details on the incentives provided for the management of climate-related issues (do not include the names of individuals).

Entitled to incentive	Type of incentive	Activity incentivized	Comment
All employees	Non-monetary reward	Other (please specify) Sustainability Leadership	The Sustainability Spotlight program provides an opportunity for all employees to share their sustainability success stories with the Xerox employee community. Success stories are highlighted on our internal web and social media sites and recognize individuals or teams for innovative or outstanding achievements that promote sustainability and environmental leadership, including climate change related actions such as energy and GHG emission reduction projects. Any Xerox employee or team of employees around the world are eligible to share/submit their stories. An example of a highlighted story for 2021 is about our Chief Sustainability Officer discussing the company's goal of reaching net zero by 2040 and what this pivotal milestone really means. Questions included topics such as "what is net zero and why is it such a hot topic of conversation?"," How is Xerox limiting its GHG emissions?", and "What can individuals do to get involved and live more sustainably?".
All employees	Monetary reward	Emissions reduction project	Monetary awards (<$2,000) can be awarded at a managers' discretion, through the 'Merit Recognition Program'. These are not directly linked to individuals' performance targets but are awarded based on merit and can for

			example be used to reward ideas or efforts to reducing energy and GHG emissions in Xerox operations, products and services provided to customers. Non-monetary rewards can also be given, such as awarding individuals with Xerox logo merchandise or through the US Xerox Dinner Award Recognition Program.
Buyers/purchasers	Non-monetary reward	Environmental criteria included in purchases	In accordance with Xerox's Socially Responsible Procurement Purchasing Policy, in addition to consideration of quality, cost, and delivery criteria, all Global Purchasing personnel are required to select suppliers and their goods and services based on Social Responsibility criteria which include: • Protecting the environment by conserving the use of valuable resources, minimizing waste and preventing releases to air, water and land • Facilitating Xerox's design, manufacture, distribution and marketing of products and services that optimize resource utilization and minimize environmental and safety impacts • Enabling Xerox to achieve its goal of continuous improvement of environment, health, and safety performance across the Value Chain.
Corporate executive team	Monetary reward	Emissions reduction target	Effective in 2021, the Compensation Committee of the Board of Directors established an Environmental, Social and Governance payout modifier that allows the otherwise applicable performance-based payout to be increased or decreased by up to 10% of target with the result not to exceed 200% of target. The 2021 environmental metric was to approve and accelerated Net Zero target to 2040 from the original 2050 timeline and establish the emissions reduction roadmap.

C2. Risks and opportunities

C2.1

(C2.1) Does your organization have a process for identifying, assessing, and responding to climate-related risks and opportunities?

Yes

C2.1a

(C2.1a) How does your organization define short-, medium- and long-term time horizons?

	From (years)	To (years)	Comment
Short-term	0	5	We consider short-term risks to be those 0-5 years out; medium-term being 5-10 out; and long-term as being beyond 10 years.
Medium-term	5	10	We consider short-term risks to be those 0-5 years out; medium-term being 5-10 out; and long-term as being beyond 10 years.
Long-term	10	50	We consider short-term risks to be those 0-5 years out; medium-term being 5-10 out; and long-term as being beyond 10 years.

C2.1b

(C2.1b) How does your organization define substantive financial or strategic impact on your business?

When identifying and assessing risks, Xerox defines substantive impact as any activity that causes a substantive impact/change (positive or negative) on revenue growth, profitability, operating costs, brand value/corporate reputation, innovation or customer satisfaction affecting either publicly reported financial results, changes to existing enterprise risk assessment results requiring mitigating action, or impacting component or product availability to the extent customer shipments or schedule are impacted. Climate change related risks are formally integrated in Xerox's Enterprise Risk Management process.

We use a materiality threshold of >$2 million impact to quantify substantive change.

C2.2

(C2.2) Describe your process(es) for identifying, assessing and responding to climate-related risks and opportunities.

Value chain stage(s) covered
Direct operations
Upstream

Risk management process
Integrated into multi-disciplinary company-wide risk management process

Frequency of assessment
More than once a year

Time horizon(s) covered
Short-term

Medium-term

Long-term

Description of process

Our Enterprise Risk Management (ERM) process strengthens our capability to assess, monitor and manage all categories of business risks. ERM steering committee members meet monthly to assess all categories of emerging risks, risk appetite and occurrence probability considering all risk time tables (i.e., short, medium and long-term through our ERM process. Vital strategic and operational risks identified are approved by the Executive Management Committee (EMC) and reviewed annually by the Board. The ERM committee follows the guidelines of the Committee of Sponsoring Organizations of the Treadway Commission (COSO) that in 2017 integrated ESG risks including climate-change related risks and opportunities in its guidelines. We assess business risks based on the risk of failing to attain our strategic objectives. The committee also monitors action plans put in place to mitigate risk at the enterprise level.

The corporation has tasked the CSR Council with the day-to-day monitoring and management of climate-related risks and opportunities. The CSR Council has the responsibility for monitoring and assessing climate change-related risks/opportunities and alerting ERM Committee of those relevant to the Enterprise. The CSR Council meets quarterly. Included in each meeting is an update of current, newly identified and/or emerging risks as well as the appropriate or necessary steps to take to mitigate the risk(s). The CSO leads coordination of the company's CSR activities, serving as the Executive Staff Director of our CSR Council.

Annually the CSR Council is responsible for identifying and assessing the relevance of the corporations' CSR priorities using a materiality assessment process. This process considers relevant CSR topics impacting Xerox® products, services and operations, including energy, GHG emissions and climate change strategy. In accordance with the GRI Standards we identify and report key risks and opportunities associated with CSR topics for the short (0-5 years), medium (5-10 years) and long term (>10 years). The intent of the materiality assessment is to confirm material topics, identify impacts, risks and opportunities, optimize the allocation of resources and help to determine the content of the annual CSR Report. Our assessment includes interviews and workshops with internal stakeholders, reviews of public and internal Xerox documents, discussions with external stakeholders and feedback from employees. We examine factors, including regulations, global social challenges, our evolving business model and environmental impacts. Each topic is assessed for both the importance to stakeholders and the significance of our positive and negative impacts (from an economic/social/environmental perspective). Xerox can have impact through our operations and facilities, products, employees and suppliers, our lobbying efforts and our community involvement. To aid prioritization, each topic is given a score (1-3) against the criteria. Results are presented via a matrix to visually present the importance of the topics. The most material topics are those that are rated high on either the x-axis or y-axis on this matrix. We prioritize the risks in terms of current risk profile as well as the projected risk profile upon completion of the risk mitigation plans. Opportunities are

prioritized on relative effort (measured by cost, time and intangibles) and benefit (measured by revenue opportunity, reduced environmental impact and liability and intangibles). Annually, the EMC and Chief Sustainability Officer presents the results of the CSR materiality assessment and proposed action plan to the board for approval. Both physical and transitional risks and opportunities are managed in the same way.

The process for managing climate-related risks and opportunities is also driven by the CSR council. The CSR Council is composed of executives who each monitor and manage a specific CSR topic area (including product development, environment and climate related issues, supply chain, etc.). Each member is supported by individuals with expertise in each topic area. The primary objective of the CSR Council is to provide oversight of the corporation's performance and management approach, including policies, goals, and strategies and to recommend actions to drive progress and integrate CSR and climate related issues into existing business practices.

Physical risk example: In our materiality assessment, physical climate change issues are integrated into the assessments of our environmental/social/economic impacts from multiple relevant topics including energy, water use and supplier assessments. Major operating units and corporate functions are also responsible for evaluating site specific risks.

The risk management process chose facilities and supplier locations that were deemed critical to business operations on the criteria of over 100 employees or comprising over $10 million in annual supplier spend. Geographical locations of sites were mapped to further identify at risk locations. Major climate impacts such as sea level rise, extreme storms, extreme temperature, and fire risk were qualitatively assessed against these locations considering long-term risk of climate impacts.

As we cannot remove this risk, physical risks are mitigated via the Business Continuity Assurance Process. Each site is required to have a Business Resumption Plan. Resumption plan drills are conducted annually and include physical climate change risks such as hurricanes, tornadoes and floods as part of the drills. The results of the drills and lessons learned are communicated to top management during operational reviews. Any deficiency is addressed via a corrective action plan. The deficiencies identified from the drills become part of the risk assessment process of the business unit in order prevent them from happening again. For example, in 2019, one of our Canadian locations conducted a 1000-year flood scenario assessment for their annual BRP drill. Evaluation of site impacts showed that the distance from the nearest watershed and the design of the building would help mitigate the impact of flood waters from an electrical infrastructure perspective, indicating relatively low vulnerability for site transformers and electrical transmission infrastructure. However, the site is currently working with a local conservation authority to develop a stormwater control landscape design to further reduce the risk of additional site impacts.

C2.2a

(C2.2a) Which risk types are considered in your organization's climate-related risk assessments?

	Relevance & inclusion	Please explain
Current regulation	Relevant, always included	Xerox recognizes that our business is directly affected by climate related regulations aimed at reducing energy use and GHG emissions in our direct operations and by our products. Our operations and our products are subject to environmental regulations in each of the jurisdictions in which we conduct our business and sell our products. For example, many of our products are already required to comply with the European Union's Energy-Related Products Directive (ERP) which has led to the adoption of "implementing measures" or "voluntary agreements" that require certain classes of products to achieve certain design and/or performance standards in connection with energy use, including the regulation of power consumption during standby/off mode and network standby. We must comply with applicable climate related regulations or potentially face market access limitations that could have a material adverse effect on our operations and financial condition. Our EHS&S department tracks emissions and energy legislation and policy that affect the company through trade associations and partnerships. The CSR Council works with the Corporate Compliance Office to assure demonstration of compliance with climate related laws, regulations and policies. Consequently, we consider issues including environmental compliance and laws, regulations or voluntary agreements relating to our energy use, reporting our GHG emissions and the energy efficiency of our products when assessing our environmental/social/economic impacts in our corporate CSR materiality assessment, quarterly CSR meetings and ERM processes.
Emerging regulation	Relevant, always included	Xerox recognizes that our business could be directly or indirectly affected by additional future climate related regulations and voluntary agreements aimed at further reducing emerging energy use and GHG emissions in our direct operations, by our products and by our supply chain. For example, the US EPA's ENERGY STAR eco-label specification for imaging equipment continues to introduce progressively more stringent energy efficiency requirements over time (Version 3.1 specification revision was recently finalized and went into effect in late 2020). This could present an increase in operating cost to the business. If Xerox was unable to meet the requirements and offer products that are as energy efficient as our competitors, there is also a risk of reduced demand for our products and market share. The increase in stringency of regulations, carbon taxes etc. aimed at limiting GHG emissions in the

		countries and states we operate, including cap and trade, do not directly impact Xerox, since we are not a regulated utility or heavy GHG emitter.
		However, they do have the potential to result in uncertainty in the cost of supplied energy, as energy generators/suppliers could pass on possible increased generation costs (to comply with the regulations) to the end user. For example, in the US, there remains uncertainty surrounding the EPA's proposed Clean Power Plan and economic studies on the impact of the rule of electricity prices have varied significantly. Given our current level of energy expenditure (including electricity, natural gas and mobile source fuel) changes in existing regulations that put an upward pressure on the cost of energy could increase the cost of doing business for Xerox in any affected region. The Office of Global Government Affairs is responsible for tracking external developments and determining relevancy to Xerox products and operations. Through trade associations and partnerships, our EHS&S department tracks future emissions and energy legislation and policy changes that may affect the company. Consequently, we consider issues including emerging laws, regulations or voluntary agreements relating to our energy use, GHG emissions & reporting and the energy efficiency of our products when assessing our environmental/social/economic impacts in our corporate CSR materiality assessment, quarterly CSR meetings and ERM processes.
Technology	Relevant, always included	We operate in an environment of rapid technological developments, changes in industry standards, and demands of customers to become more efficient. Xerox recognizes that changes in technology and innovations that support the transition to an energy efficient and low-carbon economy, for example, developments in technology which improve the energy efficiency of our document printing products and services and the development of substitute products with lower emissions, represents both risks and opportunities for our business. The printing market and environment is changing because of new technologies and shifts in customer preferences in office printing. A significant part of our strategy and ultimate success in this changing market is our ability to develop and market technology, products and services that meet these changes. If we fail to accurately anticipate and meet our customers' needs through the development of new products, technologies and service offerings or if we fail to adequately protect our intellectual property rights, if our new products are not widely accepted or if our current or future products fail to meet applicable worldwide regulatory requirements, we could lose market share and customers to our competitors and that could materially adversely affect our results of operations and financial condition. Consequently, in our corporate CSR

		materiality assessment process, our quarterly CSR meetings and ERM processes we assess: • The environmental/social/economic impacts from the energy efficiency of our products including future challenges and opportunities for improvement, innovation and competitive advantage; and • How significantly customers are influenced by the energy efficiency of our products.
Legal	Relevant, always included	Recent years have seen an increase in climate-related litigation claims being brought by property owners, municipalities, states, insurers, shareholders, and public interest organizations. Reasons for such litigation include for example the failure of organizations to mitigate impacts of climate change, failure to adapt to climate change, and insufficient disclosure around material financial risks. Xerox recognizes that if we fail to meet, for example, climate- related legislation or our stakeholders' expectations there is potential that our business could be exposed to unfavorable publicity, litigation and possible financial obligations; any of which could have a material adverse effect on our profitability, cash flow and stock price. Consequently, in our corporate CSR materiality assessment process, our quarterly CSR meetings and ERM processes we assess: • Our environmental/social/economic impacts by considering issues including environmental compliance and laws, regulations or voluntary agreements relating to our energy use, GHG emissions and the energy efficiency of our products. • How significantly stakeholders (including investors, regulators and customers) are influenced by various climate related issues.
Market	Relevant, always included	Xerox recognizes that our business could be affected by climate-related market changes such as changes in the behavior of our customers, the decline in printed pages and the increase in electronic documentation. For example, the environmental awareness and consumer concern for climate change continues to increase, creating an increased demand for more sustainable products. Consumers expect organizations and businesses to tackle the carbon footprint of their own operations and help consumers reduce their carbon emissions during the use of products or services. Customers are increasingly demanding more energy efficient products with lower power consumption and a smaller "carbon footprint". The risk if Xerox took no action to keep up with market trends is that consumers would view our printing products as unsustainable in comparison to those of our competitors, which could potentially result in reduced

		demand for our products and loss of sales and market share. Consequently, in our corporate CSR materiality assessment process, our quarterly CSR meetings and ERM processes we assess: • The environmental/social/economic impacts from the energy efficiency of our products; and • How significantly customers are influenced by the energy efficiency of our products (including the impact on brand value and corporate reputation).
Reputation	Relevant, always included	Xerox recognizes that changing customer perceptions of our organization's contribution to, or detraction from, the transition to a lower-carbon economy is a potential reputational risk. For example, the environmental awareness of stakeholders, including investors and customers, is increasing, including concern regarding increasing electricity usage by ICT companies, as well as the in-use and standby-use power consumption of devices. If stakeholders perceive that Xerox was failing to address global climate related issues through its operations, products and services, or we were subject to negative publicity this could result in an adverse effect on our financial condition, loss of reputation and in turn loss in brand value and revenue. We regularly engage with our customers about sustainability issues including environmental programs, goals and performance through: • Specific conversations with targeted customers to solicit input into our materiality assessment • Customer Satisfaction System: real-time customer feedback in a closed-loop process • Customer Relationship Surveys • Xerox Customer Community and Forum • Our own blogs and all major social media platforms • Customer personalized portal offering • Xerox Corporate Focus Executive Program • Open Xerox website • Host sustainability forums with customers, sharing sustainability best practices and encouraging customers to reduce their environmental footprint. Consequently, in our corporate CSR materiality assessment process, our quarterly CSR meetings and ERM processes we assess: • The environmental/social/economic impacts from our own energy use and the energy efficiency of our products; and • How significantly stakeholders including customers and investors are

		influenced by the energy efficiency of our own operations and our products (including the impact on brand value and corporate reputation).
Acute physical	Relevant, always included	Xerox recognizes that our business could be directly and indirectly affected by acute physical impacts of climate change such as more frequent short-term business disruptions caused by severe weather (such as hurricanes, or floods) in locations where we operate. Severe weather could impair our ability to provide services to our customers and keep our costs aligned. For example, in 2018, hurricanes Michael and Florence caused damage to some of our customers' equipment (which we were required to replace). While the 2020 Wilsonville/Portland fires did not damage any facilities, smoke caused a closure of our manufacturing operations for two days. We have also outsourced a significant portion of our manufacturing operations to third parties and service providers. Some of Xerox's suppliers are in locations that have historically been impacted by severe weather. There is potential that those manufacturers may experience disruptions and manufacturing costs could be higher. Changing precipitation patterns causing extremes such as flooding, or drought could lead to energy and water resource shortages causing disruption in our operations. If any of these risks were to be realized, we could experience interruptions in supply or increases in costs that result in being unable to meet customer demand for our products, damage our relationships with our customers and reduce our market share; all of which could adversely affect our results of operations and financial condition. Consequently, in our CSR materiality assessment process, our quarterly CSR meetings and ERM processes: • Physical climate change issues are integrated into the assessments of our environmental/social/economic impacts from multiple relevant topics including energy, water use and supplier assessments • The potential risk for extreme weather to disrupt Xerox operations or our supply chain is also included in the ESG risks assessed as part of our ERM process. • In addition, in 2020 the Xerox EHSS team completed a Climate Scenario Analysis to identify and prioritize climate-related risk for Xerox manufacturing facilities and key suppliers. Major operating units and corporate functions (e.g. Real Estate) are responsible for evaluating site specific risks e.g. resiliency to events that impact Xerox's ability to achieve business objectives. Preparedness is achieved via the BCAP including business impact analysis of risks such as drought and flooding.

Chronic physical	Relevant, always included	Xerox recognizes that our business could be directly and indirectly affected by longer term physical impacts of climate change such as change in precipitation patterns. E.g. we have outsourced a significant portion of our manufacturing operations to third parties and service providers who require sanitary and process water to operate. Some Xerox suppliers are in locations that have historically been impacted by changing precipitation patterns. Therefore, there is potential that those manufacturers may experience disruptions and manufacturing costs could be higher. If any of these risks were to be realized, we could experience interruptions in supply or increase in costs that might result in our being unable to meet customer demand for our products, damage our relationships with our customers and reduce our market share, all of which could adversely affect our results of operations and financial condition. Consequently, the impacts of our suppliers including physical climate change issues are considered in our corporate CSR materiality assessment, Business Continuity Assurance Process, our quarterly CSR meetings and ERM processes. Our CSR materiality assessment also includes discussions with our suppliers, and supplier priorities is one of the criteria factored into this assessment. We have adopted the Responsible Business Alliance's (RBA) Code of Conduct on CSR for our suppliers which includes standards regarding water usage and pollution. To monitor compliance to the Code of Conduct and our suppliers' exposure to water risks, we use Self-Assessment Questionnaires and conduct site audits of our key suppliers. High risk suppliers include those who have high risk financial profiles, have zero tolerance or major observation issues during audits or are in high risk geographies. Other methods used to engage with our suppliers include: • Routine business reviews with key suppliers • Annual communication of Xerox supplier code of conduct to supplier base • Inclusion of small and diverse businesses through our Supplier Diversity Program The potential risk for physical climate-related risks (extreme weather) to disrupt Xerox operations or our supply chain is also included in the ESG risks assessed as part of our ERM process. In 2020 the Xerox EHSS team completed a Climate Scenario Analysis to identify and prioritize climate-related risk for Xerox manufacturing facilities and key suppliers. This will feed into ERM chronic risk assessments and planning.

C2.3

(C2.3) Have you identified any inherent climate-related risks with the potential to have a substantive financial or strategic impact on your business?

Yes

C2.3a

(C2.3a) Provide details of risks identified with the potential to have a substantive financial or strategic impact on your business.

Identifier
Risk 1

Where in the value chain does the risk driver occur?
Downstream

Risk type & Primary climate-related risk driver
Current regulation
Mandates on and regulation of existing products and services

Primary potential financial impact
Decreased revenues due to reduced demand for products and services

Company-specific description
Xerox recognizes that our business is directly affected by climate related regulations, standards and voluntary agreements aimed at reducing energy use and GHG emissions of our products.

If Xerox was unable to meet the energy efficiency requirements and unable to offer products that are as energy efficient as our competitors, there is a risk of reduced demand for our products and reduced market share. Changes to existing regulations, introduction of new regulations, or failure to comply with regulations requiring our products to meet certain levels of energy efficiency could also present an increase in operating cost to the business.

For example, the EU Imaging Equipment Voluntary Agreement requires office products to achieve certain performance standards, in connection with design for sustainability and energy efficiency, including the regulation of power consumption during standby/off mode and network standby. In addition, it holds manufacturers to extending the life of products and is introducing stringent cartridge remanufacturing criteria. Xerox has been a signatory to the Imaging Equipment Voluntary Agreement since it was established. The US ENERGY STAR standard/eco-label specification for Imaging Equipment is also introducing progressively more stringent energy efficiency requirements over time and for a broader range of products, including remanufactured products (Version 3.1 specification revision was recently finalized and went into effect in late 2020). While not a regulation, compliance with Energy Star is a default requirement for many customers and is regularly referenced in public sector procurement requirements, as well as other eco-labels including Blue Angel and EPEAT. Both EPEAT and Blue Angel require ENERGY STAR certification, as well as recycled content and responsible end of life management. Xerox acquires these ecolabels and maintains registrations for all eligible

products. Such regulations and eco-labels are arising in all countries globally therefore, the need to continually improve the energy efficiency of our imaging equipment continues to be a high priority for Xerox.

As the whole industry is affected by these requirements, Xerox is not at a strategic disadvantage compared to our competitors. Nevertheless, it is essential that Xerox is able to offer products that are as energy efficient as our competitors.

Time horizon

Short-term

Likelihood

Likely

Magnitude of impact

Medium

Are you able to provide a potential financial impact figure?

Yes, an estimated range

Potential financial impact figure (currency)

Potential financial impact figure – minimum (currency)

0

Potential financial impact figure – maximum (currency)

1,300,000,000

Explanation of financial impact figure

If our products do not meet energy efficiency regulations and standards, there is potential for this to result in reduced demand for our products and decreased sales revenue.

The extent of energy performance on final procurement decisions and hence the impact on revenue is unclear.

However, our total annual equipment sales market share is ~$1.6 Billion and we estimate annual sales of our products with an eco-label (i.e. annual sales of all our entry and mid-range products) is ~$1.3 Billion per year (based on 2020 sales data). If Xerox took no action to meet more stringent requirements introduced by applicable energy efficient regulations within the required time frame, and our competitors' products become more favorable to customers, than our products with an eco-label, this market share (~$1.3 Billion revenue per year) could be at risk.

The estimated financial impact and potential loss of revenue is therefore estimated to range from $0 to $1.3 Billion per year as a worse case.

A decrease in equipment sales will also have a secondary financial impact due to

decreased sales of associated consumables, such as replacement toner cartridges and other post sales services such as maintenance.

Cost of response to risk

7,800,000

Description of response and explanation of cost calculation

To ensure that product design teams can incorporate timely environmental considerations, developments in regulations are tracked via formal processes including our Regulatory and Marketing Initiative Management System. The system includes gathering information from trade associations and regulatory tracking systems e.g. Information Technology Industry Council. We also solicit feedback from clients. The information gathered helps determine next steps such as joining a technical advisory team or collaborating on the development of new regulations.

Case Study:
Situation: the US EPA's ENERGY STAR eco-label specification for imaging equipment continues to introduce progressively more stringent energy efficiency requirements over time. This could present an increase in operating cost to the business. If Xerox was unable to meet the requirements and offer products that are as energy efficient as our competitors, there is also a risk of reduced demand for our products and market share
Task: Ensure risks from not keeping up with changes to the US Energy Star standard are mitigated
Action: Xerox served as a technical advisor for V3.0 and 3.1 of the Energy Star specification for Imaging Equipment
Result: Version 3.1 specification revision was recently finalized and went into effect in late 2020 and Xerox was fully informed and prepared for the changes

Customer expectations are also tracked through our Bid and Tender management process. Xerox manages compliance with product environmental requirements through our formal product design process and scientists in our materials research group evaluate aspects of energy, materials and sustainability to continually improve our products Our goal remains to have 100% of newly launched eligible products achieve EPEAT silver or gold and ENERGY STAR status

Cost of response: Costs to track product energy efficiency regulations, monitor product energy efficiency, and implement energy efficiency measures, are integrated in our normal business processes and are estimated to be approximately $7.8M annually. This estimate is based on 50% of the EHS&S budget devoted to market access ($1.5M), 0.5% of the development teams RD&E budget ($1.5M), and $4.8M for EPEAT reverse logistics to strip parts for reman and recycle.

Risk 2

Where in the value chain does the risk driver occur?

Direct operations

Risk type & Primary climate-related risk driver

Acute physical

Other, please specify

Increased severity and frequency of extreme weather events such as cyclones and floods

Primary potential financial impact

Increased direct costs

Company-specific description

Xerox could be directly impacted by more frequent short-term business disruptions as a result of severe weather/natural disasters e.g., flooding and winter snow storms in locations where it operates, particularly in the Mid-West and Northeast United States. These events could impair our ability to effectively provide services to our customers and keep our operating costs aligned to our associated revenues and market requirements.

For example:

• In 2012, 76 Xerox facilities were forced to close for a limited time and 102 customers in the United States were impacted by Super Storm Sandy.

• In 2014, severe winter weather forced the closure of our American Logistics Center for parts and supplies.

• In 2017, hurricanes Harvey, Irma and Maria caused irreparable damage to 4 company vehicles used by our technical services representatives/sales personnel (two vehicles in Texas, one in Georgia and one in Puerto Rico).

• In 2018, hurricanes Michael and Florence caused damage to some of our customers' equipment, which we were required to replace, and flooding to some company cars. Also in 2018, Typhoon Yutu caused power outages that lasted for days, requiring mold assessments and cleanup/remediation for Xerox office areas.

• In 2020 , forest fires raged near our Wilsonville, Oregon manufacturing facility, forcing a two-day closure of the facility due to heavy smoke. While there was no lasting facilities impact, this event had the potential to cause substantial damage to the facility and major interruptions to our ability to produce products.

However, events during the recent past have shown how our business continuity practitioners have worked in concert with our processes to ensure the safety of people and assets and the resumption of business.

Time horizon

Medium-term

Likelihood

About as likely as not

Magnitude of impact

Low

Are you able to provide a potential financial impact figure?

Yes, an estimated range

Potential financial impact figure (currency)

Potential financial impact figure – minimum (currency)

6,000,000

Potential financial impact figure – maximum (currency)

20,000,000

Explanation of financial impact figure

Should our facilities experience a disruption in their production due to severe weather, e.g. damage to our facilities or impact to our workforce, there would be increased operating, production and, potentially also capital costs to Xerox. The $ impact would depend on the type and location of the facility. E.g. the total Net Impact cost to Xerox associated with Hurricane Sandy was estimated at ~$630K which included cost/damage to Xerox facilities (<$20,000) In 2017, the cost of shutting down one of our US manufacturing plants for 2 days due to a wind storm was $200K.

However our Business Resumption Plan analysis indicates that as a worst case, should one of our toner sites be unable to operate unexpectedly for a period of three months due to facility damage from severe weather, the additional direct costs to Xerox associated with emergency actions to switch toner production to one of our facilities in another location and higher shipping costs for raw materials and finished goods would likely be in the range of $2M - $4M for a single event. Assuming 3-5 such incident over a 10 year period gives total increased costs in the range of $6-20M over ten years (i.e. $2M x 3 events and $4M x 5 events).

The estimated financial impact and potential increase is direct costs is therefore estimated to range from $6 Million to $ 20 Million over a ten year period.

Cost of response to risk

500,000

Description of response and explanation of cost calculation

Resiliency and effective response to any type of event, environmental or otherwise, that may impact our ability to achieve our business objectives is a critical business requirement. These objectives include: the safeguarding of human and capital assets; cash flow; reputation and brand. At Xerox, preparedness is achieved through a management system known as the Business Continuity Assurance Process (BCAP). Business continuity is a critical component of the Xerox risk management portfolio. It includes four disciplines:

• Emergency Preparedness: response to localized emergencies

• Crisis Management: coordination of resources to mitigate the impact of significant emergencies

• IT Disaster Recovery: recovery of electronic systems/data

• Business Resumption: processes implemented to fully resume business activities

The Business Continuity process includes business impact analyses (including physical climate risk such as storms and temperature extremes), self-assessments/audits, periodic validations, and plan status reporting to Xerox management.

Each individual site has a Business Resumption Plan, which allows them to prepare for risks of climate changes at their site. Annually plan drills are conducted and risks such as hurricanes and floods are included in the drills. Geographic risks including availability of water and flooding potential are included in the decision checklist used by Corp. Real Estate when considering site expansions and acquisitions.

Cost of response: Cost to run the Business Continuity program office (1 full time employee) to prepare, review, update and annually test the BRP, plus approximately 250 worldwide business continuity coordinators and practitioners, is integrated into our normal operations and businesses processes, but are estimated to be less than $500k/yr.

Risk 3

Where in the value chain does the risk driver occur?

Downstream

Risk type & Primary climate-related risk driver

Market

Changing customer behavior

Primary potential financial impact

Decreased revenues due to reduced demand for products and services

Company-specific description

Our business could be affected by climate- related market changes such as changes in the behavior of our customers, the decline in printed pages and the increase in electronic documentation. The environmental awareness of consumers and their concerns regarding climate change is increasing globally, creating an increased demand for more sustainable products. Consumers expect organizations and businesses to tackle the carbon footprint of their own operations and help consumers reduce their carbon emissions during the use of products or services. The risk if Xerox took no action is that consumers would view our products as unsustainable in comparison to those of our competitors, which could potentially result in reduced demand for our products and loss of sales and market share.

For example, lifecycle assessments have demonstrated that paper is by far the largest lifecycle energy and CO2 impact of printing. [Life-Cycle Analysis in the Printing Industry: A Review. Bosquin, J. et. al. http://print.rit.edu/pubs/picrm201105.pdf]. This resulted in customers looking for ways to reduce their paper consumption and printing, and market trends, including declines in installation and printed pages, fewer devices per location and an increase in electronic documentation.

Rather than see a reduced demand for Xerox products this has prompted Xerox to develop new products and services that directly result in paper reduction. For example, our Managed Print Services can help to reduce the environmental impact of a business by decreasing paper waste and carbon footprint. These solutions are also proving effective in tackling paper-to-digital workflow efficiency by providing key analytics to help understand the way in which paper is used in today's business world.

Time horizon
Short-term

Likelihood
Very likely

Magnitude of impact
Medium

Are you able to provide a potential financial impact figure?
Yes, an estimated range

Potential financial impact figure (currency)

Potential financial impact figure – minimum (currency)
320,000,000

Potential financial impact figure – maximum (currency)
1,100,000,000

Explanation of financial impact figure
If we do not meet customers' expectations for energy efficient products, there is potential for this to result in reduced demand for our products and decreased sales revenue. The extent of energy performance on final procurement decisions and hence the impact on revenue is unclear.

However, our total equipment sales market share is ~$1.60 Billion per year. Based on requests from customers, we estimate that ~20% of our equipment sales are driven by the energy efficiency of our products. Therefore, we can assume that 20% of our market share- ~$320M per year (i.e. 20% of $1.6 Billion) could be at risk if we took no action to respond to consumers' demands for energy efficient products.

Furthermore, 20% of our post-sales revenue of ~$5.5 Billion per year is equivalent to an

additional $1.1B per year of revenue which could also be at risk if contracts are not won because we do not meet customers' expectations for energy efficient products.

The estimated financial impact and potential loss of revenue is therefore estimated to range from $320M to $1.1 Billion per year as a worse case.

Cost of response to risk

7,800,000

Description of response and explanation of cost calculation

Xerox has been a leader in customer led innovation. Xerox launched the Customer Relationship Survey, which compiles valuable insights into customer behavior in a centralized database

Xerox continues to invest in the R&D of products with a lower environmental impact. E.g. Xerox has met consumer demand for increased product energy efficiency and reduced GHG emissions and paper consumption by the following offering

• Since 1993, have introduced >500 copier, printer, fax and multifunction products that have ENERGY STAR status
• Launched 29 new ConnectKey-enabled products (a software that enables information to be moved to and from the cloud. Cloud computing is recognized worldwide as less energy intensive than data centers)

We regularly communicate the company-wide commitment to environmental stewardship through our annual CSR report.

Cost of response:
The cost to conduct customer relations surveys is integrated into the ongoing and normal operations of our worldwide sales teams.
Costs to monitor, product energy efficiency, and implement energy efficiency measures are integrated into our normal operations and are estimated to be approximately $7.8M annually. This estimate is based on 50% of the EHS&S budget devoted to market access ($1.5M), 0.5% of the development teams RD&E budget ($1.5M), and $4.8M for EPEAT reverse logistics to strip parts for reman and recycle.

Approximately 1% of Xerox total revenue is spent on brand related marketing, e.g. costs associated with marketing efforts to maintain consumer awareness of Xerox sustainability efforts (e.g. annual production of the CSR report) are also integrated into our normal operations but are estimated to be ~$1M/yr

Comment

Risk 4

Where in the value chain does the risk driver occur?

Downstream

Risk type & Primary climate-related risk driver

Reputation
Shifts in consumer preferences

Primary potential financial impact

Decreased revenues due to reduced demand for products and services

Company-specific description

Our brand recognition, reputation for document management expertise, innovative technology and service delivery excellence are our competitive advantages. However, changing customer perceptions of our organization's contribution to or detraction from the transition to a lower-carbon economy is a potential reputational risk.

The environmental awareness of stakeholders, including investors and customers, is increasing, including concern regarding increasing electricity usage by ICT companies, as well as the in-use and standby-use power consumption of devices. If stakeholders perceive that Xerox was failing to address global climate related issues through its operations, products and services, loss of reputation and in turn, loss in brand value and sales revenue could result.

Time horizon

Short-term

Likelihood

Very unlikely

Magnitude of impact

Medium

Are you able to provide a potential financial impact figure?

Yes, an estimated range

Potential financial impact figure (currency)

Potential financial impact figure – minimum (currency)

320,000,000

Potential financial impact figure – maximum (currency)

1,100,000,000

Explanation of financial impact figure

If stakeholders perceive that Xerox was failing to address climate issues through its operations, products and services there is potential for reduced demand for our products and decreased sales revenue.

In 2016, Interbrand placed Xerox brand value at $5.3 billion. Attempts to quantify changes in reputation on brand value have proven difficult. However, an event (reputational risk) that caused a reduction in the stated brand value (our brand is diminished) could result in decreased sales and revenue.

The extent of the climate and energy related performance of our brand on procurement decisions and revenue is unclear. However, our total equipment market share is ~$1.6 Billion per year and we estimate that ~20% of our equipment sales are driven by the energy efficiency of our products. Therefore, we can assume that 20% of our market share ~$320M per year (i.e. 20% of $21.6 Billion) could be at risk if stakeholders perceive that Xerox was failing to respond to demands for more sustainable products and our brand equity diminished.

Furthermore, 20% of our post-sales revenue of ~$5.5 Billion per year is equivalent to an additional $1.1Billion per year of revenue could also be at risk if contracts are not won because stakeholders perceive that Xerox was failing to address climate issues through its operations, products and services.

The estimated financial impact and potential loss of revenue is therefore estimated to range from $320M to $1.1 Billion per year as a worse case.

Cost of response to risk

1,000,000

Description of response and explanation of cost calculation

Our brand is a valuable resource and continues to be ranked in the top percentile of the most valuable global brands. Annually, Xerox conducts brand awareness and perception surveys and measures its brand influence through internal and external analytical programs including the Customer Relationship Survey. Marketing and sales coverage investments are influenced by brand data, specifically levels of perception and consideration among key customer groups.

Actions we have taken to maintain our brand recognition and customer awareness of the contribution of our products and services to a lower-carbon economy include:
• In 2019, Setting a new, science-based corporate target to reduce GHG emissions 60% by 2030 from a 2016 target
• In 2020, establishing and communicating our corporate intent of being net zero by 2040.
• Continuing our strong commitment to improving the energy efficiency of our products as evidenced by continuing to meet stricter environmental labels such as ENERGY STAR 3.2 and EPEAT.
• In 2018, we partnered with PrintReleaf to offer our manage print services customers the opportunity to purchase certified reforestation/biomass credits for all paper they consume
• We regularly communicate the company-wide commitment to environmental stewardship through our CSR Report

Cost of response: Approximately 1% of Xerox total revenue is spent on brand related marketing activities. E.g. costs associated with efforts to maintain consumer awareness of Xerox sustainability efforts (e.g. annual production of the CSR report) are integrated into our normal operations but are estimated to be ~$1M/yr.

Comment

Identifier

Risk 5

Where in the value chain does the risk driver occur?

Upstream

Risk type & Primary climate-related risk driver

Acute physical

Other, please specify

Increased severity and frequency of extreme weather events such as cyclones and floods

Primary potential financial impact

Increased direct costs

Company-specific description

We have outsourced a significant portion of our overall worldwide manufacturing operations to third parties and various service providers. Some Xerox suppliers are in locations that have historically been impacted by severe weather. Therefore, there is potential that those manufacturers may experience disruptions, manufacturing costs could be higher than planned and the delivery of our products could be impacted. Xerox suppliers could be impacted by more frequent business disruptions because of severe weather, resulting in a reduction/disruption in production capacity and electronic components that are unavailable or cannot be shipped to Xerox in a timely manner.

If any of these risks were realized, we could experience interruptions in supply or increases in costs that might result in our being unable to meet customer demand for our products, damage our relationships with our customers and reduce our market share, all of which could adversely affect our results of operations and financial condition.

For example, the Japanese tsunami in March 2011 resulted in business interruptions and additional costs to Xerox due to premium air-freight charges.

In 2018 a number of our US suppliers in the Gulf of Mexico experienced short term closures due to impacts from Hurricanes Michael and Florence and flooding in Texas.

Service calls in our Midwest NSP territories also experienced delays due to severe winter weather impacting travel.

Time horizon

Medium-term

Likelihood

About as likely as not

Magnitude of impact

Medium-low

Are you able to provide a potential financial impact figure?

Yes, an estimated range

Potential financial impact figure (currency)

Potential financial impact figure – minimum (currency)

20,000,000

Potential financial impact figure – maximum (currency)

523,000,000

Explanation of financial impact figure

Should our key suppliers experience a disruption in their production capacity or be unable to operate due to severe weather events, damage to their facilities and/or impact their workforce, there would likely be increased operating and production costs to Xerox associated with sourcing and transporting the same products from alternative suppliers. The impact has not been fully quantified financially but would depend on the type and location of the supplier.

For example, during the Japanese tsunami in March 2011 additional costs to Xerox to freight products by air was ~$20M. In 2017 (although not climate related) we experienced a spike in air freight volumes and costs to ease delays in our supply chain. In 2018, a number of our US suppliers in the Gulf of Mexico experienced short term closures due to impacts from Hurricanes Michael and Florence and flooding in Texas. Service calls in our Midwest NSP territories also experienced delays due to severe winter weather impacting travel.

However, the maximum estimated financial impact is calculated by assuming a 5% increase in our annual transportation and acquired product spend with key suppliers (~$10B + $460M), which would increase our annual direct costs by $523M per year (i.e. 5% of $10.46 Billion).

The estimated financial impact and potential increase in revenue is therefore estimated to range from $20 to $523 Million per year.

Cost of response to risk

500,000

Description of response and explanation of cost calculation

Xerox has formal Business Resumption Plans (BRP) for parts or subassemblies so that in the event of a climate related natural disaster there would only be a temporary disruption while orders are moved to alternate suppliers. We require that all 'critical' suppliers maintain BRP plans and we audit the plans. 'Critical' suppliers are identified based on:
• Business risk: length of time to resume normal business, % of revenue, propensity for natural disasters
• Revenue impact: amount spent, spread across Xerox product families.

Xerox Global Procurement department works with our supply chain partners to identify alternative suppliers in the event of a supply or services continuity issue. All our key suppliers in Asia have BRPs. Commodities are ranked according to criticality and resources are allocated to mitigate the impact should these commodities become unavailable during disasters, such as buffer inventory of up to 2 months or alternate sources. E.g. during the Japanese tsunami in 2011 our Business Continuity process ensured that business interruptions were minimized by sourcing and air freighting the same products from alternative suppliers.

Cost of response: Costs to run the Business Continuity program office (1 full time employee) to prepare, review and update and annually test the BRP, plus approximately 250 worldwide business continuity coordinators and practitioners, are integrated into our normal operations and businesses processes, but are estimated to be less than $500k/yr

Opp1

Where in the value chain does the opportunity occur?

Downstream

Opportunity type

Products and services

Primary climate-related opportunity driver
Development and/or expansion of low emission goods and services

Primary potential financial impact
Increased revenues resulting from increased demand for products and services

Company-specific description
An increase in regulations and standards requiring products to meet certain levels of energy efficiency not only creates an increased awareness and demand among consumers but presents a global opportunity for Xerox to provide more products that are more energy efficient compared to our competitors. It creates a marketing opportunity to showcase products that are industry leaders, increasing demand for Xerox products and in turn, our market share.

For example, the US ENERGY STAR standard/eco-label specification for Imaging Equipment is introducing progressively more stringent energy efficiency requirements over time and for a broader range of products (the Version 3.0 specification revision was recently finalized and went into effect in October 2019.). While not a regulation, compliance with Energy Star is a default requirement for many customers and is regularly referenced in public sector procurement requirements, along with other eco-labels including Blue Angel and EPEAT. This creates a potential opportunity for Xerox to be an earlier adopter of the V3.0 specification and/or provide a broader range of ENERGY STAR products.

In March 2017, Xerox launched 29 new ConnectKey-enabled products. ConnectKey is a software solution that enables information to be moved to and from the cloud without the security risks that commonly exist. Cloud computing is an alternative to large data centers and is being recognized worldwide as less energy intensive than data centers while generating fewer greenhouse gas emissions. In addition, Xerox ConnectKey™ and Cisco EnergyWise enable energy management by allowing for control, management, and reporting of a device's power consumption and the setting of power states and timeout intervals.

Time horizon
Short-term

Likelihood
Virtually certain

Magnitude of impact
Medium-low

Are you able to provide a potential financial impact figure?
Yes, an estimated range

Potential financial impact figure (currency)

Potential financial impact figure – minimum (currency)

0

Potential financial impact figure – maximum (currency)

80,000,000

Explanation of financial impact figure

The increase in development and demand for more energy efficient and low emission products presents a potential for Xerox to provide more products that are more energy efficient compared to our competitors thus increasing demand for Xerox products and in turn our sales revenue.

While energy efficiency criteria grow in prominence in public and private procurement specifications, it is uncertain as to whether energy performance has a substantial impact on the final procurement decisions; hence the impact on revenue is unclear.

However, our total equipment market share is ~$1.6 Billion per year. Assuming developments in technology and ecolabel requirements would enable us to expand our range of eco label and low carbon products and services, resulting in a maximum 5% increase in sales, our sales revenue could increase by up to $80M/yr. (i.e. 5% of $1.6Billion)

The estimated financial impact and potential increase in revenue is therefore estimated to range from $0 to $80 Million per year.

Cost to realize opportunity

7,800,000

Strategy to realize opportunity and explanation of cost calculation

Developments in regulations are tracked via a number of formal processes including our Regulatory and Marketing Initiative Management System. The system includes gathering information from trade associations and regulatory tracking systems. Xerox manages compliance with product environmental requirements through our formal product design process, in which design requirements are implemented to achieve the performance expectations set by regulations and certifications. Our goal remains to have 100% of newly launched eligible products achieve EPEAT silver or gold and ENERGY STAR status. In 2018, we became the first to register printing devices in 11 EU Countries.

Case Study:
Situation: the US EPA's ENERGY STAR eco-label specification for imaging equipment continues to introduce progressively more stringent energy efficiency requirements over time. An increase in regulations and standards requiring products to meet certain levels of energy efficiency not only creates an increased awareness and demand among consumers . It creates a marketing opportunity to showcase products that are industry leaders, increasing demand for Xerox products and in turn, our market share.
Task: Ensure the opportunity for Xerox to provide more products that are more energy efficient compared to our competitors and the the US Energy Star standard are

maximized

Action: Xerox served as a technical advisor for the ITI for V3.0 of the Energy Star specification for Imaging Equipment.

Result: Version 3.1 specification revision was recently finalized and went into effect in late 2020 and Xerox was fully informed and prepared for the changes. 100% of new, eligible products were registered with Energy Star.

Xerox continues to invest in R&D of energy-efficient product designs to meet future customer demands. We direct our R&D investments to areas such as data analytics, business process automation, and reducing the environmental impact of digital printing.

Cost to realize: Costs to track product energy efficiency regulations, monitor product energy efficiency, and implement energy efficiency measures, are integrated into our normal operations, and are estimated to approximately $7.8M annually. This estimate is based on 50% of the EHS&S budget devoted to market access ($1.5M), 0.5% of the development teams RD&E budget ($1.5M), and $4.8M for EPEAT reverse logistics to strip parts for reman and recycle.

Where in the value chain does the opportunity occur?
Downstream

Opportunity type
Products and services

Primary climate-related opportunity driver
Development of climate adaptation, resilience and insurance risk solutions

Primary potential financial impact
Increased revenues resulting from increased demand for products and services

Company-specific description
We recognize opportunity in business resumption challenges experienced by other businesses impacted by adverse weather through increased demand for our services offerings. As the frequency and severity of extreme weather associated with climate change increases, negative weather impacts such as severe changes in precipitation extremes, tropical storms and more intense winter storms may be partially offset by revenue opportunities associated with Xerox business continuity products. Xerox can reduce interruption and keep customers "up and running" after they have been impacted because of realization of climate change risks and in turn enable them to adapt to the physical changes associated with climate change.

For example, Xerox® DocuShare® Private Cloud Service manages and stores information in a secure central repository, in the cloud, which provides access to business critical content online and offline, through desktop and mobile devices, from encrypted user authentication to internet firewalls to regularly scheduled backups, offsite storage and site replication—to ensure the safety and availability of our customer's data at any time, including if our customers have been impacted by adverse weather or other disruptive events. When an organization gets its technical infrastructure and software as a service through a cloud, the potential for a significant weather related disaster to shut down the services or lose data is low.

Xerox is also working to address customer issues faster, and with less environmental impact, with expanded remote solve capabilities. In January of 2021 Xerox announced the acquisition of CareAR™, an augmented reality support platform company that provides real-time access to expertise for customers, employees, and field workers. With CareAR™ software, remote agents and experts can virtually see the situation and visually guide a solution using a suite of augmented reality tools via desktop, mobile, and smart glass devices, as if they were in-person. This is expected to improve remote solve of customer issues, resulting in fewer on-site service calls and a reduction in Xerox service call miles, fuel usage and associated GHG emissions. In addition to the environmental benefits, this technology will enable Xerox to serve customers more effectively and strengthen customer loyalty.

Time horizon

Short-term

Likelihood

More likely than not

Magnitude of impact

Medium-low

Are you able to provide a potential financial impact figure?

Yes, an estimated range

Potential financial impact figure (currency)

Potential financial impact figure – minimum (currency)

0

Potential financial impact figure – maximum (currency)

17,000,000

Explanation of financial impact figure

Physical climate related impacts present potential revenue opportunities associated with Xerox business continuity products. Xerox can reduce interruption and keep customers "up and running" after they have been impacted as a result of realization of climate change risks and in turn enable them to adapt to the physical changes associated with climate change.

For example, increased demand for Xerox cloud-based products would result in increased revenue to Xerox.

In 2018, revenue from Xerox Intelligent Workplace Services offering (which includes our workflow automation services portfolio) was ~$3,457 Million. Therefore, assuming a maximum 0.5% increase in our annual revenue from our Intelligent Workplace Services offering equates to up to a ~$17 Million per year increase in sales revenue (i.e. 0.5% of $3457 Million).

The estimated financial impact and potential increase in revenue is therefore estimated to range from $0 to $17 Million per year, excluding as yet undisclosed Cleantech financial impacts.

Cost to realize opportunity

373,000,000

Strategy to realize opportunity and explanation of cost calculation

Xerox has a rich heritage of innovation, and it continues to be a core strength of the company as well as a competitive differentiator. Our aim is to create value for our customers, our shareholders and our people by driving innovation in key areas. Investment in R&D is critical for competitiveness in our fast-paced markets.
To realize this opportunity, we direct our R&D investments and innovation to align with our strategic growth opportunities in areas including:
• Simplifying, automating and enabling business processes on the cloud via developing new products with flexible platforms that run on robust and scalable infrastructure to enable greater business process agility and resilience; and
• Reducing the environmental impact of digital printing including cloud-based printing
• Cleantech innovation focused on radical efficiency improvements for industrial and consumer applications, industrial decarbonization strategies to reduce manufacturing emissions, and GHG sensing and management technologies to measure and verify emissions, identify and eliminate leaks, and effectively capture and store carbon.

Our innovation goals are supported by cross disciplinary research programs in our research centers. The goal of Cleantech is mitigating GHG emissions by delivering innovative solutions to new customers and market segments. For instance, air conditioning is responsible for 3% of all worldwide greenhouse gas emissions – more than the entire airline industry. PARC scientists and engineers are currently demonstrating and scaling up technologies to improve air conditioning efficiency by 80% using electrochemical concepts to remove moisture from inlet air. We anticipate strong emerging markets in India, China, Brazil and Indonesia. Potential financial impact is not yet publicly available, but could be significant.

Cost to realize: Costs to grow this business are integrated into our normal operations and businesses processes, but we have aligned our R&D investment portfolio with our growth opportunities in areas such as workflow automation, as well as reducing the environmental impact of digital printing. Our fleet of new multifunction devices will help

our customers transform how they work with leading security, high-performance apps, on-the-go print capabilities and cloud connectivity. The cost to realize is therefore based on our total annual Xerox R&D expenses, which totaled $373 million in 2019.

Where in the value chain does the opportunity occur?

Direct operations

Opportunity type

Resource efficiency

Primary climate-related opportunity driver

Use of more efficient production and distribution processes

Primary potential financial impact

Reduced indirect (operating) costs

Company-specific description

Energy cost avoidance: Focusing on energy efficiency to achieve emissions reduction targets within our company operations also presents significant global cost savings opportunities from reduced electricity, gas and mobile source fuel consumption.

Focusing on energy efficiency and emission reduction also results in additional reputational benefits.

Time horizon

Short-term

Likelihood

Virtually certain

Magnitude of impact

Medium-low

Are you able to provide a potential financial impact figure?

Yes, a single figure estimate

Potential financial impact figure (currency)

460,000

Potential financial impact figure – minimum (currency)

Potential financial impact figure – maximum (currency)

Explanation of financial impact figure

Focusing on improving the energy efficiency of our operations presents an opportunity to reduce operating (energy) costs. For example. energy efficiency activities implemented between 2002 and 2015 is estimated to have saved the company ~$21 million in energy costs from reduced electricity, gas and mobile source fuel consumption.

In 2018, measures and initiatives to reduce energy consumption across the company (e.g. HVAC and compressed air upgrades) has resulted in energy savings of ~$460,000/year in total. We have therefore calculated the potential annual financial impact, and reduction in annual operating costs, based on actual annual energy costs savings realized in 2018. Energy savings benefits from infrastructure upgrades continue year-to-year.

Cost to realize opportunity

2,000,000

Strategy to realize opportunity and explanation of cost calculation

To manage this opportunity for cost saving and reputational benefits we implemented an ongoing energy reduction program and monitor energy consumption against our voluntary energy and GHG reduction targets. For example in 2019, having met its previous target of 25% reduction in GHG emissions by 2025 from a 2016 baseline, Xerox set a new, more aggressive science-based target of 60% reduction in GHG emissions by 2030 from the same 2016 baseline. In 2019, we achieved a 19% reduction in total energy use from 2016, as well as a 29% reduction in GHG emissions compared to 2016

We have several projects scheduled/budgeted to help us reduce our energy use and achieve this target, including lighting upgrades, Air Handling Unit Controls upgrades and boiler blowdown heat recovery economizer replacement at our Webster, NY location and optimization in operations all around North America.
Facility energy usage and cost is also tracked for all sites where energy is paid directly by Xerox. We strategically manage energy procurement to provide the lowest risk mitigated energy cost.

The costs to realize the opportunity include implementing energy efficiency projects and initiatives e.g. in 2018 our budget for capital projects with associated energy savings and energy related operational improvements was ~$2M
We invested ~$1,000,000 in measures to reduce energy consumption and carbon emissions across the company such as:
• New air compressor and compressed air control systems
• Two projects at the Webster, NY campus to utilize 'free cooling' systems in place of mechanical cooling for CHW systems
Budgeted projects that were not implemented were deferred to 2019.

We have therefore calculated the annual costs to realize this opportunity, based on the actual 2018 our budget for capital projects with associated energy savings and energy related operational improvements.

Opp4

Where in the value chain does the opportunity occur?

Downstream

Opportunity type

Products and services

Primary climate-related opportunity driver

Shift in consumer preferences

Primary potential financial impact

Increased revenues resulting from increased demand for products and services

Company-specific description

Our brand recognition, reputation for document management expertise, innovative technology and service delivery excellence are our competitive advantages.

The environmental awareness of consumers globally is increasing, creating a demand for more sustainable products. Consumers expect organizations and businesses to tackle the carbon footprint of their own operations and help consumers reduce their carbon emissions during the use of products or services. For example, lifecycle assessments have demonstrated that paper is by far the largest lifecycle energy and CO2 impact of printing. [Life Cycle Analysis in the Printing Industry: A Review. Bosquin, J., et. al. http://print.rit.edu/pubs/picrm201105.pdf]. This has resulted in customers looking for ways to reduce their paper consumption and printing, but also presents opportunities for Xerox to develop new products and services that directly result in paper reduction.

Consequently, Xerox has developed office solutions to provide services such as scan to email and print drivers that allow users to set duplex to default, n-up printing, turn off banner pages, etc. In late 2009, Xerox introduced the "earth smart" feature on its print driver, which makes several of the features which enable responsible printing available at the click of an icon. This driver feature has been rolled out on individual products and was released in the global driver in mid-2010. Our Managed Print Services can help reduce the environmental impact of a business by decreasing paper waste and carbon footprint. These solutions are proving effective in building toward properly tackling paper-to-digital workflow efficiency by providing key analytics to help understand the way in which paper is used in today's business world.

Customers are also increasingly demanding more energy efficient products with lower power consumption and a smaller "carbon footprint". Increasing customer demand for energy efficient products and electronic delivery of documents creates opportunities for innovations in Xerox product design and operation.

Time horizon
Short-term

Likelihood
Virtually certain

Magnitude of impact
Medium-low

Are you able to provide a potential financial impact figure?
Yes, an estimated range

Potential financial impact figure (currency)

Potential financial impact figure – minimum (currency)
0

Potential financial impact figure – maximum (currency)
350,000,000

Explanation of financial impact figure
Being at the forefront of product innovations which use less energy while maintaining product efficiency presents business opportunities and helps us to gain/maintain our market position. Maintaining or increasing market share has a direct link to business revenue and profitability.

The potential annual financial impact, and increase is revenue is calculated by assuming a 5% increase in our current total market share (of $7 Billion) due to our improved brand recognition and reputation for creating sustainable products and services. This would increase revenue by up to a maximum of $350M (i.e 5% of $7 Billion) per year.

The estimated financial impact and potential increase in revenue is therefore estimated to range from $0 to $350 Million per year.

Cost to realize opportunity
8,000,000

Strategy to realize opportunity and explanation of cost calculation
Xerox has long been a leader in customer led innovation. In 2012 Xerox launched the Customer Relationship Survey which standardized the way Xerox collects and analyzes customer feedback worldwide and compiles valuable insights into customer behavior in a centralized database.

Xerox continues to invest in R&D of products and consumables with a lower environmental impact and has met consumer demand for product energy efficiency and reduced GHG emissions and paper consumption by for example:
• Introducing >500 copier, printer, fax and multifunction products that have ENERGY STAR status since 2009
• In 2018 we partnered with PrintReleaf to offer our manage print services customers the opportunity to purchase certified reforestation/biomass credits for all paper they consume
We also regularly communicate the company-wide commitment to environmental stewardship through our annual CSR report

Costs to realize: Costs to conduct customer relations surveys are integrated into the normal operations of our worldwide sales teams. Costs to implement energy efficiency measures are integrated into our normal operations but are estimated to be <$7M/yr (<0.1% of total operating costs of ~$7 Billion). Approximately 1% of Xerox total revenue is spent on brand related marketing and costs associated with marketing efforts to maintain consumer awareness of Xerox sustainability efforts (e.g. production of the CSR Report) are estimated to be ~$1M/yr. Breakdown of R&D spending by category is not publicly communicated and is not included in this estimate.

C3. Business Strategy

C3.1

(C3.1) Does your organization's strategy include a transition plan that aligns with a 1.5°C world?

Row 1

Transition plan
Yes, we have a transition plan which aligns with a 1.5°C world

Publicly available transition plan
Yes

Mechanism by which feedback is collected from shareholders on your transition plan
We have a different feedback mechanism in place

Description of feedback mechanism
Xerox conducted extensive, proactive investor outreach to facilitate candid discussions about our business and strategy. the company hosted calls with investors and solicited feedback about ESG reporting metrics, diversity and executive compensation

Frequency of feedback collection

Annually

Attach any relevant documents which detail your transition plan (optional)

📎 xerox-2040-net-zero-roadmap.pdf

C3.2

(C3.2) Does your organization use climate-related scenario analysis to inform its strategy?

	Use of climate-related scenario analysis to inform strategy
Row 1	Yes, qualitative, but we plan to add quantitative in the next two years

C3.2a

(C3.2a) Provide details of your organization's use of climate-related scenario analysis.

Climate-related scenario	Scenario analysis coverage	Temperature alignment of scenario	Parameters, assumptions, analytical choices
Transition scenarios IEA 2DS	Company-wide		In 2020, Xerox completed a qualitative, forward-looking climate scenario analysis using two alternative temperature scenarios; "Low Carbon Future <2°C" and "Extreme Global Warming 4°C". This analysis evaluated physical climate risks and resilience at all Xerox manufacturing locations and key facilities, critical supplier locations and customer related activities, and includes site-specific analysis against a range of potential climate-related acute and long-term physical risks as well as transition risks that impact Xerox's markets, technology, regulatory requirements and reputation. The "Low Carbon Future <2°C" was assessed using the IEA's World Energy Outlook 2DS. This ambitious climate transition scenario, was selected as it has been a commonly used climate scenario for many years and is widely used by policy makers and business stakeholders to assess their climate strategies. For Xerox this represents significant climate impact as well as higher transition and opportunity risks as part of a faster-moving transition to low carbon technologies. The IEA models make assumptions about

			technology, energy policy, CO2 prices, fuel prices, energy use, resources, markets and various societal, political and economic drivers such as population and GDP. No changes were made to the inputs or assumptions in the scenarios. Our climate change-related scenario analysis considered medium (2030-2040) and long-term (2050) time frames. The timeframes are relevant to Xerox due to our goals to reduce GHG emissions by at least 60% by 2030 and to achieve net zero carbon no later than 2040. Any identified significant risks, opportunities or adaptive measures would need to be addressed in our net-zero roadmap (currently under development), our short-term business strategies and capital planning activities. The long-term timeframe is relevant due to international policies that are in place (e.g.: Paris Climate Accord) and, at the time, aligned with Xerox's net zero by 2050 goal (which has since been moved up to 2040).
Physical climate scenarios Customized publicly available physical scenario	Company-wide	1.6ºC – 2ºC	In 2020, Xerox completed a qualitative, forward-looking climate scenario analysis using two alternative temperature scenarios; "Low Carbon Future <2°C" and "Extreme Global Warming 4°C". This analysis evaluated physical climate risks and resilience at all Xerox manufacturing locations and key facilities, critical supplier locations and customer related activities, and includes site-specific analysis against a range of potential climate-related acute and long-term physical risks as well as transition risks that impact Xerox's markets, technology, regulatory requirements and reputation. This scenario was selected as it has been a commonly used climate scenario for many years and is widely used by policy makers and business stakeholders to assess their climate strategies The model makes assumptions about technology, energy policy, CO2 prices, fuel prices, energy use, resources, markets and various societal, political and economic drivers such as population and GDP. No changes were made to the inputs or

			assumptions in the scenarios. Our climate change-related scenario analysis considered medium (2030-2040) and long-term (2050) time frames. The timeframes are relevant to Xerox due to our goals to reduce GHG emissions by at least 60% by 2030 and to achieve net zero carbon no later than 2040. Any identified significant risks, opportunities or adaptive measures would need to be addressed in our net-zero roadmap (currently under development), our short-term business strategies and capital planning activities. The long-term timeframe is relevant due to international policies that are in place (e.g.: Paris Climate Accord) and, at the time, aligned with Xerox's net zero by 2050 goal (which has since been moved up to 2040).
Physical climate scenarios Customized publicly available physical scenario	Company-wide	4.1ºC and above	In 2020, Xerox completed a qualitative, forward-looking climate scenario analysis using two alternative temperature scenarios; "Low Carbon Future <2°C" and "Extreme Global Warming 4°C". This analysis evaluated transition risks that impact Xerox's markets, technology, regulatory requirements and reputation. Given the slowing of US climate ambitions under the Trump administration and uncertainty of near-term US political direction, this temperature scenario was selected to represent a very real worst-case climate possibility. For Xerox, the 4DS scenario would represent a broad range of climate impacts and physical risks impacting our facilities, supply chain and customers in potentially catastrophic ways. The models make assumptions about technology, energy policy, CO2 prices, fuel prices, energy use, resources, markets and various societal, political and economic drivers such as population and GDP. No changes were made to the inputs or assumptions in the scenarios. Our climate change-related scenario analysis considered medium (2030-2040) and long-term (2050) time frames. The timeframes are relevant to

			Xerox due to our goals to reduce GHG emissions by at least 60% by 2030 and to achieve net zero carbon no later than 2040. Any identified significant risks, opportunities or adaptive measures would need to be addressed in our net-zero roadmap (currently under development), our short-term business strategies and capital planning activities. The long-term timeframe is relevant due to international policies that are in place (e.g.: Paris Climate Accord) and, at the time, aligned with Xerox's net zero by 2050 goal (which has since been moved up to 2040.). The 4DS scenario was used to determine highest physical risks. We used company data to map cost-intensive Xerox and supplier operations against assessments of sea level rise, extreme storms, extreme precipitation, river and coastal flooding, and extreme temperature, drought and fire risks to categorize the expected degree of impact for each location. Our Dundalk (Ireland), PARC (Palo Alto, CA) and Venray (Netherlands) manufacturing and research sites were found to be at highest physical risk due to sea level rise, drought and fire. Multiple suppliers located in coastal areas were found to be at high risk of sea level rise and flooding, extreme storms and extreme temperature risk.

C3.2b

(C3.2b) Provide details of the focal questions your organization seeks to address by using climate-related scenario analysis, and summarize the results with respect to these questions.

Row 1

Focal questions
- Impact on major suppliers?
- Impact on Sales/Profit?
- Impact on geographical areas with large customer base?
- Impact on Employees and Owned Facilities?
- What are the costs to respond to and mitigate crises?
- What are changes to facility, process and transportation energy use and costs?
- What are the missed opportunities?
- Sustainability-related R&D or capital investments ?

Results of the climate-related scenario analysis with respect to the focal questions

The 2DS scenario showed that Xerox's greatest transition risks and opportunities lay in competitors acting faster with new technologies or more appealing offerings (including sustainability services).

The 4DS scenario was used to determine highest physical risks. We used company data to map cost-intensive Xerox and supplier operations against assessments of sea level rise, extreme storms, extreme precipitation, river and coastal flooding, and extreme temperature, drought and fire risks to categorize the expected degree of impact for each location. Our Dundalk (Ireland), PARC (Palo Alto, CA) and Venray (Netherlands) manufacturing and research sites were found to be at highest physical risk due to sea level rise, drought and fire. Multiple suppliers located in coastal areas were found to be at high risk of sea level rise and flooding, extreme storms and extreme temperature risk.

This qualitative analysis is being used to screen and prioritize material risks to Xerox facilities and supply chain continuity by our CSR Council, Enterprise Risk Management (ERM) specialists and upper management. Senior Management, and other decision makers will further evaluate specific risks that climate change presents to the Xerox business model and key assets and will help highlight the risks, opportunities, priorities and necessary actions that must be accounted for in wider strategic business decisions.

As an outcome of the Climate Scenario Analysis, "transition risk" (specifically, the reputational and operational risks associated with potentially not achieving Xerox's science-based GHG target and net zero by 2040 goals) and physical risks (specifically, supply chain interruption due to climate change) have been added to the ERM major risks dashboard and are monitored monthly by ERM specialists and upper management.

C3.3

(C3.3) Describe where and how climate-related risks and opportunities have influenced your strategy.

	Have climate-related risks and opportunities influenced your strategy in this area?	**Description of influence**
Products and services	Yes	Our products and services have been impacted by: • current regulations, standards and voluntary agreements requiring our products to meet levels of energy efficiency including the EU Energy Related Products Directive, the US ENERGY STAR standard/eco-label (policy and legal risk) • changes in consumer preferences toward energy efficient products (market and reputation risk) • opportunities to develop low emissions products and business continuity products

		Consequently, one of the most important components of our immediate/short term (0-5 year) business strategy is to create value for our customers and shareholders by enhancing the sustainability benefits of our products and services and innovating business solutions. We offer more sustainable digital printing and document management solutions that can improve our customers' environmental performance and mitigate climate change by providing alternative solutions to replace current energy intensive processes and behaviors. Our product design is governed by global regulations and Xerox Corporate EHS&S Policy, which states that Xerox will "Address climate change by reducing the carbon footprint of our operations, products, and services" For example: • LCAs have demonstrated that paper is the largest lifecycle energy and CO_2 impact of printing. This prompted us to decide to develop new products and services that help customers understand their paper consumption. • In 2017, Xerox launched 29 new ConnectKey-enabled products. This software enables information to be moved to/from the cloud. Cloud computing is an alternative to large data centers and is being recognized worldwide as less energy intensive. • In early 2019, Xerox decided to updated its phase gate-based product delivery process to integrate sustainability goals into product design. As part of this process, Xerox mandated that ALL new eligible products achieve EPEAT Gold. This strategic decision ensures that the Xerox product line continues to improve energy efficiency, promote reuse / recycling and responsible end of life management. All EPEAT Gold products are supported by product life cycle assessments (LCAs). As examples, the new PrimeLink and AltaLink products that Xerox launched in 2019 and 2020 meet EPEAT Gold requirements in US, Canada and eight EU countries (Switzerland, Norway and Canada have country specific requirements not met yet).
Supply chain and/or value chain	Yes	Our supply chain has been impacted by extreme weather such as storms and floods (physical climate related risk). We outsource a significant portion of our manufacturing operations to third parties. Some Xerox suppliers are in locations that have historically been impacted by severe weather. E.g. the Japanese tsunami in March 2011 resulted in business interruptions and additional costs to Xerox due to premium air-freight charges. The impact of this risk to

		our supply chain is considered low as we have a large and diverse supply chain and to date a small proportion of our production suppliers have been impacted by extreme weather. However, to manage and mitigate the impacts of this risk as part of our immediate/short term (0-5 year) business strategy Xerox has developed formal Business Resumption Plans for parts or subassemblies, so that in the event of a climate related natural disaster the disruption would be temporary while orders are moved to the alternate supplier. We also require that all 'critical' Technology suppliers maintain an acceptable business resumption plan and we audit the plans on a routine basis. Xerox Global Procurement works with our supply chain partners to identify alternative suppliers in the event of a supplier issue that causes a supply or services continuity issue. In 2020 we conducted a qualitative forward-looking climate scenario analysis. This analysis covered all Xerox key facilities, and critical supplier locations, and includes site-specific analysis against a range of potential climate-related acute and long-term physical risks as well as transition risks. This qualitative analysis will be used to screen and prioritize material risks to supply chain continuity, for further assessment by our CSR Council, ERM specialists and upper management. In this way the Climate Scenario Analysis will also serve as a tool for further educating the Board, Senior Management, and other decision makers to the specific risks that climate change presents to the Xerox business model and key assets and will help highlight the risks, opportunities, priorities and necessary actions that must be accounted for in wider strategic business decisions.
Investment in R&D	Yes	Our investments in product R&D have been impacted by: • current regulations, standards and voluntary agreements requiring our products meet certain levels of energy efficiency including the EU Energy Related Products Directive (policy and legal risk); • changes in consumer preferences toward more energy efficient products (market and reputation risk); • the opportunity to develop more low emissions products and business continuity products; and • cleantech research focusing on delivering affordable renewable energy, clean air and water, efficient energy distribution and other solutions across multiple industries. The need to improve the energy efficiency of our imaging

| | | equipment continues to be a high priority for Xerox. One of the most important components of our longer term (>10 year) strategy is to create value for our customers and our shareholders by enhancing the sustainability benefits of our products and innovating business solutions and technologies.

 We direct our R&D investments and innovation to align with our strategic growth opportunities in areas including: simplifying, automating and enabling business processes on the cloud via developing new products with flexible platforms to enable greater business process agility and resilience; and reducing the energy use and environmental impact of digital printing including cloud based printing; and cleantech and energy innovation programs.

 Our innovation goals are supported by cross disciplinary research programs in our research centers. A substantial business decision influenced by the climate change was to continue to be a leader in energy-related research and invest in PARC's cleantech and energy innovation program. For example:
 • In 2019, PARC launched a cleantech research initiative and partnership with new venture SolFocus, Inc. One of the first results is a low-cost concentrator photovoltaic (CPV) technology jointly developed with SolFocus. The CPV panels use high efficiency solar cells and are smaller, cheaper and easier to manufacture than the flat-plate panels that currently dominate the solar electricity market.
 • In 2020, PARC announced an initiative to develop technology to reduce humidity and thereby improve efficiency of air conditioning systems by approximately 80%. Bringing this technology to market will open brand new markets and revenue streams for Xerox. |
| Operations | Yes | Our operations have been impacted by physical climate related risks. For example,
 • In 2012, 76 Xerox facilities were forced to close for a limited time and 102 customers in the US were impacted by Superstorm Sandy
 • In 2014, severe winter weather forced the closure of our American Logistics Center
 • In 2018, hurricanes Michael and Florence caused damage to some of our customers' equipment (which we were required to replace).
 • In 2020, western wildfires threatened our Wilsonville, Oregon manufacturing facility. While no facility damage |

		occurred, smoke forced a two-day closure of the facility. This risk is managed via a system known as the Business Continuity Assurance Process (BCAP) which includes business impact analyses (including physical climate related risk such as temperature extremes), self-assessment, periodic validations, and plan status reporting to Xerox management. Each site has a Business Resumption Plan which allows them to prepare for risks of climate changes at their site. Our operations are also impacted by opportunities to reduce operating costs and improve our reputation and competitive advantage through implementing a company-wide energy and GHG reduction program. Developing solutions that reduce GHG emissions and address stakeholder concerns are integrated into Xerox business strategy. One of the most important components of our immediate/short term (0-5 year) focus is to invest in technologies that reduce energy consumption in our own operations and to continue to make progress towards our GHG and energy reduction goals. We have an ongoing energy reduction program and monitor energy consumption against our voluntary energy reduction target. To support our strategic commitments and business strategy, we set targets and long-term goals to reduce energy use and GHG emissions , and accelerate targets as they are achieved: • In 2018 we established a target of 25% reduction in energy use and GHG emissions by 2025 from a 2016 baseline • By 2019 we had already achieved approximately 75% of our goal so we set a more aggressive, corporate-wide science-based target aligned with a 1.5°C scenario. This new target is to reduce Scope 1 and 2 GHG emissions by 60% by 2030 from the same 2016 baseline, with an ultimate goal of net zero greenhouse gas emissions by 2040. • We also set (and achieved) a goal for 20% renewable energy use by 2020

C3.4

(C3.4) Describe where and how climate-related risks and opportunities have influenced your financial planning.

	Financial planning elements that have been influenced	Description of influence
Row 1	Revenues Indirect costs Capital expenditures Acquisitions and divestments	Climate related risks and opportunities are factored into multiple elements of our annual financial planning process including: • Revenue planning / forecasting; • Capital and operating cost planning and expenditure for each business area; and • Decisions regarding acquisitions and divestments. For example: Should any of our facilities or key suppliers experience a disruption in production capacity or be unable to operate due to physical climate related risk (severe weather/natural disasters), damage to our facilities and/or impact to our workforce there would likely be increased production costs to Xerox. For example, in 2012, 76 Xerox facilities were forced to close for a limited time due to Hurricane Sandy. The associated additional Net Impact cost to Xerox was estimated at ~$630K which included cost/damage to Xerox facilities (<$20,000) and customer equipment replacement costs ($210,000). Therefore, as a result of historical physical climate related impacts to both our direct operations and supply chain we review both our capital and operating cost planning and expenditure for each business area and where required, increase spending to reduce likelihood of future unexpected failures. Also decisions regarding acquisitions and divestments have also been impacted by the potential for physical climate related risk. When making business decisions regarding site expansions, relocations and acquisitions, information regarding geographic and physical climate change risks including hurricanes and tornados, flooding, water availability, etc. sourced from the questionnaire conducted by Corporate Real Estate is considered in the final decision and cost offer.

C3.5

(C3.5) In your organization's financial accounting, do you identify spending/revenue that is aligned with your organization's transition to a 1.5°C world?

No, but we plan to in the next two years

Is this a science-based target?
Yes, and this target has been approved by the Science Based Targets initiative

Target ambition
1.5°C aligned

Please explain target coverage and identify any exclusions
"Having achieved the GHG target that we set in 2017 (Abs 3) five years early, in 2019 we set a new science-based target which is both more ambitious and reflective of the current organization. Our newly established target uses the same base year (2016) as we had previously used but increases the target to a 60% reduction of scope 1 and scope 2 market-based emissions by 2030 from a 2016 baseline. The methodology used to set our science-based target was the Absolute Emissions Contraction approach, a

scientifically-informed method for companies to set GHG reduction targets necessary to limit global temperatures to a 1.5°C rise above preindustrial levels based on the SR15 special report issued by the IPCC in 2018. The IPCC SR15 estimates an overall carbon budget of 420 GtCO2 for a 66% probability to limit warming to 1.5°C, and carbon budget of 580 GtCO2 for a 50% probability of limiting warming to the same temperature. We recently resubmitted our commitment to the Science Based Target initiative (SBTi) for the following reasons:

• Xerox was listed under the "Software and services" sector for our original commitment. Under our current structure, we should be listed under the "Technology Hardware and Equipment" sector.

• Xerox has separated from Conduent (previously known as Xerox Services).

• The original commitment we submitted for year 2025 has already been achieved. We have a new, more aggressive commitment for 2030. SBTi has accepted our new commitment and has validated it.

• The 2021 scope 1 and 2 emissions were estimated using an updated methodology which required Xerox to re-baseline its 2016 emissions."

Target ambition

Well-below 2°C aligned

Please explain target coverage and identify any exclusions

In addition to setting new science-based targets for scope 1 and scope 2 emissions, we set an additional emissions reduction target for its scope 3 emissions.

Using the Absolute Emissions Contraction approach specified in the SBTi criteria, our goal is to reduce our scope 3 emissions by 35% by 2030 from a 2016 baseline in line with keeping global temperature well-below 2°C as defined by the SBTi GHG reduction scenarios.

From Xerox's preliminary scope 3 screening, this target includes emissions from both upstream, operations, and downstream emission sources. Our target includes emissions from purchased goods and services (C1), Capital goods (C2), Fuel and Energy Related Activities (C3), upstream transportation and distribution (C4), waste generated in operations (C5), Business Travel (C6), employee commuting (C7), use of sold products (C11), and End of life treatment of sold products (C12) per the GHG Protocol corporate value chain emissions categories. Combined, these categories constitute Xerox's scope 3 emissions.

Is this target part of an emissions target?

Abs3, Abs 4 and NZ1

Is this target part of an overarching initiative?

No, it's not part of an overarching initiative

Please explain target coverage and identify any exclusions

In 2017 following the separation of the business into two independent, publicly-traded companies (on December 31, 2016) we set a new energy reduction target, which is both more ambitious and reflective of the current organization. We are now working on our new corporate-wide target to reduce energy consumption by 25% by 2025 (from a 2016 baseline).

Xerox is treating this goal as still underway until effects from post-COVID bounce-back are assessed. In 2022, an updated methodology was used to estimate energy associated with scopes 1 and 2 emissions. This caused a re-baseline for 2016 information.

Plan for achieving target, and progress made to the end of the reporting year

Xerox plans to reduce energy consumption by continuously evaluating and implementing energy efficiency projects, portfolio consolidation, and leverage innovations such as CareAR to mitigate vehicle travel for technical service.

C4.3c

(C4.3c) What methods do you use to drive investment in emissions reduction activities?

Method	Comment
Financial optimization calculations	Several financial avenues are used to drive investment in emission reduction activities: • Energy savings, which will result in emissions reductions, based on favorable project payback due to cost savings resulting from saving energy. • Rebates from state and federal sources, utility companies, etc. We look to capitalize on all available programs to assist funding these projects.
Other Goal setting and alignment	Corporate goals are set which drive emissions reductions. For example, the implemented emission reduction projects and initiatives helped achieve our goal of 25% reduction in GHG emissions by 2025 based on a 2016 baseline. Having achieved the GHG target that we set in 2017 five years early, in 2019 we set an even more ambitious science-based target of reducing GHG emissions by 60% by 2030 from our 2016 baseline.

C4.5

(C4.5) Do you classify any of your existing goods and/or services as low-carbon products?

Imaging Equipment

Description of product(s) or service(s)

Since 1993, we have introduced over 500 copier, printer, fax and multifunction products that have ENERGY STAR status. In 2020, 100% of our newly launched eligible products achieved ENERGY STAR 3.0 requirements and the program will continue to raise the standard overtime with tougher requirements. Products that earn the ENERGY STAR label meet strict energy-efficiency specifications set by the U.S. EPA. These energy requirements serve as the foundation for other eco-labels, such as EPEAT. Our goal remains for 100% of newly launched eligible products to achieve this ecolabel.

16

Explain your calculation of avoided emissions, including any assumptions

The EPA has estimated ENERGY STAR imaging equipment (copiers, printers, scanners, all-in-one devices) meeting the latest requirements will use up to 35% less

electricity compared to standard models (source Imaging Equipment | ENERGY STAR) saving customers money and reducing their Scope 2 carbon footprint.

For example, in theEnergy Star rated Xerox Altalink 8155MFD the combination of low melt Low Gloss Black toner and improved electronics result in typical energy consumption of approx. 40kWh per year, approximately a 50% lower use phase compared to a previous model. Assuming an average electricity emission factor for the US this represents savings of approximately 16kg CO2e per year from using each newer model compared to the previous model. IPCC SAR100 year Global Warming Potentials have been used in the CO2e calculations and the average electricity emission factor for the US is sourced from eGRID 2020 GHG Annual Total
Output Emission Rates U.S. annual non-baseload CO2e output emission rate. In 2021, approximately 18% of revenue is from sales of equipment with at least one Type 1 ecolabel, such as an Energy Star rating.

Kg CO2e per technical service trip

Life cycle stage(s) covered for the reference product/service or baseline scenario
Use stage

Estimated avoided emissions (metric tons CO2e per functional unit) compared to reference product/service or baseline scenario
12.5

Explain your calculation of avoided emissions, including any assumptions
Baseline emissions per functional unit were estimated based on total annual fuel consumed and site visits made over the same time-period by Xerox technical service representatives in North America. These attributes determined the average CO2 emissions generated per customer call. Each remote solve successfully completed by using CareAR service avoids this unit emission.

Revenue generated from low-carbon product(s) or service(s) as % of total revenue in the reporting year
0

C5. Emissions methodology

C5.1

(C5.1) Is this your first year of reporting emissions data to CDP?
No

C5.1a

(C5.1a) Has your organization undergone any structural changes in the reporting year, or are any previous structural changes being accounted for in this disclosure of emissions data?

Row 1

Has there been a structural change?
Yes, other structural change, please specify

Name of organization(s) acquired, divested from, or merged with
N/A

Details of structural change(s), including completion dates

In 2020, Xerox began integration of a business segment, now known as Xerox Business Service (XBS) under full operational control of Xerox. XBS had previously been outside of operational control and therefore not included in the boundary conditions of a GHG inventory.

C5.1b

(C5.1b) Has your emissions accounting methodology, boundary, and/or reporting year definition changed in the reporting year?

	Change(s) in methodology, boundary, and/or reporting year definition?	Details of methodology, boundary, and/or reporting year definition change(s)
Row 1	Yes, a change in boundary	XBS was added to the boundary to Xerox operation. This was accounted for the rebaseline for 2016, the baseline year for Xerox emissions targets.

C5.1c

(C5.1c) Have your organization's base year emissions been recalculated as result of the changes or errors reported in C5.1a and C5.1b?

	Base year recalculation	Base year emissions recalculation policy, including significance threshold
Row 1	Yes	Base year emissions are retroactively adjusted to reflect significant changes, such as mergers, acquisitions, and divestitures, within Xerox that would compromise the consistency and relevance of the reported GHG emissions information. While the decision to recalculate GHG emissions relating to either the baseline or subsequent years is made on a case by case basis, Xerox uses a reference "significance threshold" of 5% (increase or decrease) to aid with the decision making (i.e., if recalculation of a data sample indicates that the change(s) will affect the overall total by 5% or greater than that previously disclosed, the historical dataset is recalculated).

C5.2

(C5.2) Provide your base year and base year emissions.

December 31, 2016

Base year emissions (metric tons CO2e)

123,284

Comment

On December 31, 2016 Xerox Corporation completed the separation of its Business Process Outsourcing (BPO) business from its Document Technology and Document Outsourcing (DT/DO) business into two independent, publicly-traded companies: a business process services company called Conduent, and a document management and document outsourcing company, which retained the name Xerox.

While responses submitted prior to 2018 were based on the operation of the legacy Xerox, since 2018 Xerox is reporting separately from Conduent on our data and operations. In accordance with the Greenhouse Gas Protocol, to make data and performance trends between years comparable the base year and base year emissions have been reset as a result of the separation of the business. This 2016 baseline therefore reflects the change and the current organization. In 2020, Xerox began integration of XBS, a business division of Xerox, which was not previously under the operational control. This business division has been in operation since at least 2016, therefore the additional emissions were re-assessed to include the expanded operational boundary.

Reporting year

 Comment

C6.4

(C6.4) Are there any sources (e.g. facilities, specific GHGs, activities, geographies, etc.) of Scope 1 and Scope 2 emissions that are within your selected reporting boundary which are not included in your disclosure?

 Yes

C6.4a

(C6.4a) Provide details of the sources of Scope 1 and Scope 2 emissions that are within your selected reporting boundary which are not included in your disclosure.

Source

 Due to the small size of emissions and difficulties in data collection, the following 'de-minimis' sources are excluded from the inventory:
 • Stationary combustion emissions from emergency generator fuel oil and diesel use
 • Mobile emissions from LPG forklift truck use
 Mobile emissions from onsite security, emergency, maintenance, mail vehicles and lawn care equipment used by Xerox.

Relevance of Scope 1 emissions from this source

 Emissions are not relevant

Relevance of location-based Scope 2 emissions from this source

 No emissions from this source

Relevance of market-based Scope 2 emissions from this source (if applicable)

 No emissions from this source

Explain why this source is excluded

 In line with recognized carbon accounting guidance, the assessment of GHG emissions includes all identified sources anticipated to make a material contribution (more than 5%) to Xerox total GHG inventory. A number of small sources of minor Scope 1 emissions however, have been deemed to be immaterial / 'de minimis' and therefore excluded from our emissions inventory. For example, emissions from refrigerant HFCs

used in manufacturing sites has been estimated using data available for a selection of sites and deemed to be 'de-minimis' (<0.6% of the total Scope 1 and 2 GHG emissions). Due to difficulties in data collection and the small size of the emissions this emission source is therefore excluded from the emissions inventory calculation.

Estimated percentage of total Scope 1+2 emissions this excluded source represents

0

Explain how you estimated the percentage of emissions this excluded source represents

Stationary combustion emissions estimated using 2016 data from Webster as worse case/proxy for other manufacturing sites. Webster is the biggest manufacturing site and represents the absolute worst case.

Mobile LPG use is captured for Europe. Most forklifts trucks are electrical

No data available although welding is performed very infrequently, emissions from combustion of welding gas is anticipated to be significantly lower than combustion from emergency generators for example (<0.3% of total emissions).

Fugitive emissions from fire extinguishers estimated using 2016 data from Webster as worse case / proxy for other sites. Webster is the biggest manufacturing site and represents the absolute worst case. Fire Suppression equipment inspected semi-annually to prevent leaks.

Other mobile source emissions estimated in 2022 using data for other emissions sources last collected in 2020 and compared with estimated emissions from Scope 1 inventory for 2021.

C6.5

(C6.5) Account for your organization's gross global Scope 3 emissions, disclosing and explaining any exclusions.

Upstream leased assets

Evaluation status

Not relevant, explanation provided

Please explain

We take an operational control based approach to reporting and report all locations where we are present as part of our Scope 1 and 2 footprint; therefore, we do not have any upstream assets that we lease as part of our Scope 3 footprint.

Downstream transportation and distribution

Evaluation status

Not relevant, explanation provided

Please explain

This category includes emissions from transportation of sold products and the end consumer in vehicles not paid for by Xerox and from retail and storage. Xerox doesn't have point of sale locations – we ship direct to the customer therefore these emissions are included together with upstream transportation.

Processing of sold products

Evaluation status

Not relevant, explanation provided

Please explain

Not relevant – Xerox supplies finished electronic products, therefore no further processing of the product is required before consumer use.

Use of sold products

Evaluation status

Emissions in reporting year (metric tons CO2e)

110,912

Emissions calculation methodology

Average product method
Methodology for direct use phase emissions, please specify

Includes emissions from electricity use of devices by end users installed globally in the reporting year

Percentage of emissions calculated using data obtained from suppliers or value chain partners

0

Please explain

Includes emissions from electricity use of devices by end users installed globally in the reporting year. At a minimum, product models that had over 1,000 installs during the reporting year are included in the assessment. Device attributes are derived from their publicly available specification sheets. Device print time over an estimated lifetime of 5 years is calculated using recommended monthly duty cycle and device print speed. The device is assumed to be in sleep mode for non-print time (sleep time). Calculated print time is multiplied by active power and remaining time in is multiplied by sleep power to estimate total electricity use of devices. Total electricity is multiplied by average USA electricity emissions factors from EPA eGRID.

unit total revenue

Metric denominator: Unit total

7,038,000,000

Scope 2 figure used

Market-based

% change from previous year

39.6

Direction of change

Increased

Reason for change

From disclosed emissions data of 2020 compared to 2021, there is a 39.6% increase in reported emissions. However, a majority of this can be explained by the expansion of our boundary conditions associated with our Scope 1 and 2 inventory. In Comparison with 2020 emissions using the same new boundary conditions, we saw a 8.9% reduction in Scope 1 and 2 GHG emissions calculated using the market-based Scope 2 method in 2021 compared to 2020. 2020 emissions were recalculated to satisfy the expanded boundary conditions in the new methodology. During the time period, we also saw a 35.7% increase in emissions intensity when comparing reported emissions. Upon reevaluation and correction, the 0.2% increase in revenue helped reduce our corrected carbon intensity factor from the previous year by >10% change. Decreases were due to several energy reduction projects implemented across our facilities (as reported in C4.3b), change in production at some of our manufacturing facilities, consolidation in our real estate portfolio, reduction in carbon intensity of supplied electricity due to purchasing of substantial Renewable Energy Credits, and impacts from COVID19.

C7. Emissions breakdowns

C7.1

(C7.1) Does your organization break down its Scope 1 emissions by greenhouse gas type?

Yes

C7.1a

(C7.1a) Break down your total gross global Scope 1 emissions by greenhouse gas type and provide the source of each used greenhouse warming potential (GWP).

Greenhouse gas	Scope 1 emissions (metric tons of CO2e)	GWP Reference

CO2	81,965	IPCC Sixth Assessment Report (AR6 - 100 year)
CH4	46	IPCC Sixth Assessment Report (AR6 - 100 year)
N2O	330	IPCC Sixth Assessment Report (AR6 - 100 year)
HFCs	6,693	IPCC Sixth Assessment Report (AR6 - 100 year)

C7.2

(C7.2) Break down your total gross global Scope 1 emissions by country/region.

Country/Region	Scope 1 emissions (metric tons CO2e)
United States of America	67,967
Canada	6,906
Other, please specify Rest of the World	14,162

C7.3

(C7.3) Indicate which gross global Scope 1 emissions breakdowns you are able to provide.
    By activity

C7.3c

(C7.3c) Break down your total gross global Scope 1 emissions by business activity.

Activity	Scope 1 emissions (metric tons CO2e)
Business services (office based activities)	6,199
Manufacture or assembly of hardware/components	38,294
Distribution Center/Warehouse	1,520
Research Center	946
Mobile / Fleet	42,077

C7.5

(C7.5) Break down your total gross global Scope 2 emissions by country/region.

Country/Region	Scope 2, location-based (metric tons CO2e)	Scope 2, market-based (metric tons CO2e)
United States of America	36,889	29,715

Canada	1,196	2,247
Other, please specify Rest of the World	12,681	15,011

C7.6

(C7.6) Indicate which gross global Scope 2 emissions breakdowns you are able to provide.

By activity

C7.6c

(C7.6c) Break down your total gross global Scope 2 emissions by business activity.

Activity	Scope 2, location-based (metric tons CO2e)	Scope 2, market-based (metric tons CO2e)
Business services (office based activities)	19,518	21,494
Manufacture or assembly of hardware/components	28,340	23,075
Distribution Center/Warehouse	1,555	746
Research Center	1,353	1,658

C7.9

(C7.9) How do your gross global emissions (Scope 1 and 2 combined) for the reporting year compare to those of the previous reporting year?

Decreased

C7.9a

(C7.9a) Identify the reasons for any change in your gross global emissions (Scope 1 and 2 combined), and for each of them specify how your emissions compare to the previous year.

	Change in emissions (metric tons CO2e)	Direction of change	Emissions value (percentage)	Please explain calculation
Change in renewable energy consumption	239	Increased	0.2	20,500 MWh in RECs purchased in 2020 were retired against our manufacturing facility in Webster, NY. 1,636 MWh in renewable energy were purchased by our manufacturing plant in Wilsonville, OR. RECs were retired

				against our most GHG intensive facilities in the US; however, the reduced renewable electricity purchased translated to an increase in emissions. Increase of GHG emissions attributed to RECs and supplier supported renewable electricity are 9,822 metric tonnes CO_2e. Increase of GHG emissions attributed to additional renewable energy are 239 metric tonnes CO_2e. 239 tCO_2e / 97,456 (2020 Scope 1 + 2 emissions) = 0.2% increase
Other emissions reduction activities	176	Decreased	0.2	Total Scope 1 and Scope 2 (market) emissions reduced by approximately 176 tCO_2e due to the continued implementation of various energy reduction projects across our worldwide operations including a new air compressor and compressed air control system and several projects at our largest site (see also Question 4.3b) Decrease of GHG emissions attributed to energy reduction projects are 176 metric tonnes CO_2e. 176 tCO_2e / 97,456 (2020 Scope 1 + 2 emissions) = 0.2% decrease
Divestment				
Acquisitions				
Mergers				
Change in output	6,374	Decreased	6.5	Total Scope 1 and Scope 2 (market) emissions reduced by approximately 6,374 tCO_2e as a result of reduced output from our manufacturing facilities, organic consolidation of our global real-estate portfolio and reduction in mobile fleet activity. Decrease of GHG emissions attributed to change in output are 6374 metric tonnes CO_2e. 6374 tCO_2e / 97,456 (2020 Scope 1 + 2 emissions) = 6.5% decrease. Part of this decrease is likely due to the impacts of COVID19 during the reporting year including fewer employees working in

				office environment due to continued impacts of COVID19 in 2021.
Change in methodology				
Change in boundary	44,863	Increased	46	Total Scope 1 and 2 (market) emissions increased due to a change in boundary conditions associated with Xerox GHG inventory. A large number of facilities (mostly business services) were added to the inventory due to a change in operational control of a large section of the business. Increase of GHG emissions attributed to additional faciltiies are 44863 metric tonnes CO2e. 44863 tCO2e / 97,456 (2020 Scope 1 + 2 emissions) = 46.0% increase
Change in physical operating conditions				
Unidentified				
Other				

C7.9b

(C7.9b) Are your emissions performance calculations in C7.9 and C7.9a based on a location-based Scope 2 emissions figure or a market-based Scope 2 emissions figure?

Market-based

C8. Energy

C8.1

(C8.1) What percentage of your total operational spend in the reporting year was on energy?

More than 0% but less than or equal to 5%

C8.2

(C8.2) Select which energy-related activities your organization has undertaken.

	Indicate whether your organization undertook this energy-related activity in the reporting year

Consumption of fuel (excluding feedstocks)	Yes
Consumption of purchased or acquired electricity	Yes
Consumption of purchased or acquired heat	No
Consumption of purchased or acquired steam	No
Consumption of purchased or acquired cooling	No
Generation of electricity, heat, steam, or cooling	No

C8.2a

(C8.2a) Report your organization's energy consumption totals (excluding feedstocks) in MWh.

	Heating value	MWh from renewable sources	MWh from non-renewable sources	Total (renewable and non-renewable) MWh
Consumption of fuel (excluding feedstock)	HHV (higher heating value)	0	381,059	381,059
Consumption of purchased or acquired electricity		23,325	220,692	244,017
Total energy consumption		23,325	601,751	625,076

C8.2b

(C8.2b) Select the applications of your organization's consumption of fuel.

	Indicate whether your organization undertakes this fuel application
Consumption of fuel for the generation of electricity	No
Consumption of fuel for the generation of heat	Yes
Consumption of fuel for the generation of steam	No

Consumption of fuel for the generation of cooling	No
Consumption of fuel for co-generation or tri-generation	No

C8.2e

(C8.2e) Provide details on the electricity, heat, steam, and/or cooling amounts that were accounted for at a zero or near-zero emission factor in the market-based Scope 2 figure reported in C6.3.

C9. Additional metrics

C9.1

(C9.1) Provide any additional climate-related metrics relevant to your business.

Description
Energy usage

Metric value
625,076

Metric numerator
Mwh Energy consumption

Metric denominator (intensity metric only)

% change from previous year
21.8

Direction of change
Increased

Please explain
Compared to stated energy consumption in 2020, stated energy consumption in 2021 increased 21.8%. However, when changes in boundary conditions are accounted for and recalculated for 2020, Xerox energy consumption decreased by 12.8% year over year due to a number of intentional factors, including site consolidation activities, operational improvements in energy efficiency due to improvements in lighting, cooling, air handling and process equipment upgrades. Energy use was also inadvertently reduced in 2021 due to ongoing COVID related impacts, including fewer people in the workplace and reduced production volumes. Xerox greenhouse gas emissions are highly correlated with energy use; focus on our science-based target to reduce our GHG Scope 1 and 2 emissions by 60% by 2030 from our 2016 baseline means that our focus

will continue to be on reducing
overall energy year-over-year basis.

C10.2

(C10.2) Do you verify any climate-related information reported in your CDP disclosure other than the emissions figures reported in C6.1, C6.3, and C6.5?

Yes

C10.2a

(C10.2a) Which data points within your CDP disclosure have been verified, and which verification standards were used?

Disclosure module verification relates to	Data verified	Verification standard	Please explain
SC. Supply chain module	Product footprint verification	We have completed full cradle-to-grave peer-reviewed LCAs on multiple Xerox printer and multifunctional device configurations. The peer review was undertaken in accordance with ISO 14071:2014 LCA - Critical review processes and reviewer competencies: Additional requirements and guidelines to ISO 14044:2006 Permission to use the JEMAI (Japan Environmental Management Association for Industry) Carbon Footprint of Products (CFP) declaration and logo also requires 'limited level assurance' of our product LCA	Lifecycle Assessments (LCAs) are a means of technically evaluating the environmental footprint of a product's materials, manufacturing, distribution, use and end-of-life. We conduct full LCAs, in accordance with the appropriate ISO standards (ISO 14040, 14044, 14067) to determine where in the product lifecycle the largest environmental impacts arise and to compare products with a significant difference in technology. Full peer-reviewed and verified LCAs have been conducted on many of our printing devices. Many of these LCAs directly contributed to our products achieving the Electronic Products

		data by a CFP System Certification body registered with JEMAI.	Environmental Assessment Tool® (EPEAT®) Gold certification for these configurations and provided valuable input to our design teams to deter/mine future opportunities for reductions in environmental impacts.

C11. Carbon pricing

C11.1

(C11.1) Are any of your operations or activities regulated by a carbon pricing system (i.e. ETS, Cap & Trade or Carbon Tax)?

No, and we do not anticipate being regulated in the next three years

C11.2

(C11.2) Has your organization originated or purchased any project-based carbon credits within the reporting period?

No

C11.3

(C11.3) Does your organization use an internal price on carbon?

No, but we anticipate doing so in the next two years

C12. Engagement

C12.1

(C12.1) Do you engage with your value chain on climate-related issues?

Yes, our suppliers
Yes, our customers/clients

C12.1a

(C12.1a) Provide details of your climate-related supplier engagement strategy.

Type of engagement

Innovation & collaboration (changing markets)

Details of engagement

Run a campaign to encourage innovation to reduce climate imp[acts on products and services

Other, please specify
Product Design Collaboration

% of suppliers by number
0.15

% total procurement spend (direct and indirect)
80

% of supplier-related Scope 3 emissions as reported in C6.5
0

Rationale for the coverage of your engagement
As part of the product eco-label evaluation and registration process we regularly communicate and collaborate with our key critical production suppliers to help determine future opportunities for reductions in the lifecycle GHG impacts of products such as the use of materials with low embodied carbon or improving energy efficiency through better design. Globally, we have approximately ~4,100 suppliers however ~83% are indirect /services suppliers and ~17% are production suppliers. 1% of our suppliers are 'critical' production suppliers who manufacture and assemble our products. We prioritize our engagement with a subset of our 'critical' production suppliers, which represent 80% of our spend. Lifecycle assessments of our products show that use and maintenance phase have a considerable impact in carbon emissions, thus Xerox's focus is on reducing emissions from our services related to these products.

Impact of engagement, including measures of success
Xerox has long collaborated with our key critical production suppliers to incorporate environmental considerations into product design. We measure success based on the number of products registered to Energy Star, EPEAT, and other eco-labels or voluntary measures. Each eco-label includes several categories of environmental attributes that span the lifecycle of electronic products including, for example, material selection and recycled content, energy conservation and end of life management. For instance, Xerox participates in a collaborative effort every year with our partner, Fuji Business Innovations, to identify environmental characteristics to improve and to set goals that are rolled into product requirements. In response to the new Energy Star specification, one area of focus was reducing product energy use. The new AltaLink products that Xerox launched in July 2020 meet EPEAT Gold requirements and use 50% less energy than the predecessor products that they replaced. In addition, the Xerox B310 and B315 product line also achieved EPEAT Gold in 2021 through collaboration with our suppliers.

Comment

Type of engagement
Information collection (understanding supplier behavior)

Details of engagement

Other, please specify
Audited on-site, and assessed off-site through RBA self-assessment questionnaires (SAQs)

% of suppliers by number
4

% total procurement spend (direct and indirect)
99

% of supplier-related Scope 3 emissions as reported in C6.5
0

Rationale for the coverage of your engagement
All suppliers are subject to an initial risk assessment. However, suppliers flagged in the risk assessment (in addition to suppliers deemed critical to our supply chain) are required to complete detailed questionnaires. Based on the risk assessments and questionnaires, we annually select suppliers for compliance review or audit.

A total of 96 suppliers have been audited and assessed off-site through self-assessment questionnaires (SAQs), which represents 99% of total spend. Trained Xerox personnel conduct the audits on-site, however in 2020 COVID-19 impacted our ability to do in person audits.

Both audits and compliance reviews follow the Responsible Business Alliance (RBA, formerly Electronic Industry Citizenship Coalition (EICC)) Audit format, which addresses labor practices, Health and Safety and environmental issues including minimizing energy consumption and tracking GHG emissions. In 2019, Xerox extended the CSR audit footprint into other geographic regions, such as Europe and the USA.

Impact of engagement, including measures of success
Xerox recognizes that the primary value of an onsite compliance assessment is not in the identification of issues at a site, but in the correction of those issues. We want to recognize those sites that demonstrate their commitment to climate change and corporate responsibility through verified closure of the issues identified in a site audit. We have set our net zero goal to 2040. Xerox holds a high standard for its suppliers as it relates to meeting this goal of lessening our impact on the environment. During the audit, we classify areas of non-conformance as "priority," "major," "minor" or "for review." We provide each supplier with a written performance assessment and work with our suppliers to close gaps identified in the on-site audits. Xerox reserves the right to audit and evaluate compliance to our supplier's contractual commitments and our policies. It is our expectation that all suppliers comply with the Responsible Business Alliance (RBA) Code of Conduct and commitment to climate change and corporate responsibility. The Validated Assessment Process (VAP) provides us with assurance in identifying risks and driving improvements and robust management systems for labor, ethics, health, safety, and environmental conditions in the supply chain. Transparency is the key to a successful audit.

Non-compliance by a supplier with climate-related requirements will result in Xerox taking the appropriate actions to remedy the situation. For example, one of our suppliers established a procedure to manage energy consumption, but it did not establish annual targets on GHG reduction, so through the corrective action process we provided support for the suppliers to set up GHG objectives and targets and close the gap. We have initially measured success based on the performance levels of our suppliers against the code of conduct (e.g., Needs Improvement / Achieving / Maintain). Supplier performance has improved over time with more suppliers achieving higher performance levels from year to year. Success is measured by receiving at least 80% of our supplier's assessments with a designation of "achieving or maintaining". In 2020, due to COVID-19 travel restrictions worldwide, in-person assessments drastically decreased however, in 2021 we have been able to sustain and support the ongoing execution of climate initiatives.

Comment

In 2008, we became a member of the Responsible Business Alliance – RBA (formerly EICC) whose Code of Conduct sets industry standards on social, environmental and ethical issues in the electronics industry supply chain. We have adopted the RBA Code of Conduct as our Supplier Code of Conduct. We continually reinforce the importance of the Supplier Code of Conduct to our supplier base. We incorporate standards from the Supplier Code of Conduct in purchase agreements. We run a risk assessment and require suppliers to participate in the Xerox Compliance Program. Finally, we send an annual communication to our entire supplier base.

Rationale for the coverage of your engagement

All Global Purchasing (GP) personnel are required to incorporate the Xerox Social Responsibility policies (including environmental sustainability topics such as climate change, energy and GHG reduction, etc.) into their interactions with all suppliers during sourcing, contracting and ongoing management activities as appropriate.

In addition to consideration of quality, cost, and delivery criteria, GP personnel shall select suppliers and their goods and services based on Social Responsibility criteria, developed jointly with the appropriate SME organizations. Our standard RFP template includes several CSR/sustainability questions regarding climate change, energy initiatives, GHG emission tracking and targets, recycling efforts, and overall reduction in environmental footprint. Depending on the nature of the services requested, our sourcing experts and business teams determine the weighting of each scored section into the supplier selection process. GP requires all suppliers to comply with the Supplier Code of Conduct (we have adopted the RBA Code of Conduct as our Supplier Code of Conduct). The terms and conditions in purchase agreements and purchase order forms incorporate social responsibility requirements (including environmental sustainability topics such as climate change, energy and GHG reduction, etc.) as well as the requirement for suppliers to comply with the Supplier Code of Conduct and all applicable laws and regulations. GP reinforces the Supplier Code of Conduct in an annual communication to all suppliers.

Impact of engagement, including measures of success

This process serves to raise suppliers' awareness about the importance of social responsibility topics such as climate change, energy and GHG reduction, etc. We measure success based on the success of the supplier relationship and the performance levels of new suppliers against the code of conduct (e.g. Needs Improvement / Achieving / Maintain). In the subsequent follow up supplier reviews and/or audits, which are routinely conducted as part of Global Purchasing's ongoing supplier management by procurement professionals and quality assurance engineers. Supplier performance has improved over time with more suppliers achieving higher performance levels from 2012 to 2015 than prior to 2012 .

Comment

C12.1b

(C12.1b) Give details of your climate-related engagement strategy with your customers.

Type of engagement & Details of engagement

Education/information sharing

Share information about your products and relevant certification schemes (i.e. Energy STAR)

% of customers by number

100

% of customer - related Scope 3 emissions as reported in C6.5

0

Please explain the rationale for selecting this group of customers and scope of engagement

We offer digital multifunction printers and energy-efficient solutions to our customers to anticipate and address their increased demand for more sustainable and energy efficient products. For example, approximately 50% less energy is used by one multifunction printer than the combined annual consumption of the individual products it replaces. Each new generation of Xerox products offers more functionality and uses less energy – saving our customers money and reducing their carbon footprint. We therefore, regularly provide information to the public and all (100%) our global customers about the energy and sustainability credentials of our products, including energy related certification schemes, partners and more via our website, corporate blogs, social media and collaterals.

Impact of engagement, including measures of success

We measure success through website and social media site hits, downloads of reports and collaterals and the recognition awards and ratings we receive.

We are confident the messages are making an impact. Case studies showing how our products and services helped customers reduce the total number of devices used, increase the number of energy-efficient devices used and therefore reduce energy use are available on our website (https://www.xerox.com/en-us/insights/type-case-study). As an example, a major U.S. financial services company replaced 1,200 personal printers with 172 energy-efficient multifunction devices bringing significant sustainability gains, including energy/GHG savings and less toner and paper usage. Through our Print Smart program we also helped another company reduce its paper consumption by 6.3 million printed pages. The resulting environmental impacts included reductions more than 500,000 pounds of greenhouse gas emissions. Xerox is a charter partner of the International ENERGY STAR program and has introduced nearly 500 ENERGY STAR qualified products since 1994. The annual savings from our ENERGY STAR qualified equipment installed in our customer's locations is equivalent to lighting one million U.S. homes for a year.

Type of engagement & Details of engagement

Education/information sharing
Run an engagement campaign to education customers about your climate change performance and strategy

% of customers by number

100

% of customer - related Scope 3 emissions as reported in C6.5

0

Please explain the rationale for selecting this group of customers and scope of engagement

Xerox account managers regularly contact the EHS&S department requesting environmental sustainability presentations to share with current customers, new clients and potential new clients, especially for Managed Print Service clients. The presentations include the Xerox sustainability strategy, goals, targets, challenges, new developments, etc. related to climate change, GHG emissions, energy conservation and other sustainability topics. The presentations contain information such as:
• Comparison between Xerox materiality matrix and the customer's high priorities
• Environmental, Social, and Governance (ESG) matters (ranging from climate change and extreme weather events to workplace violence) and how Xerox integrates ESG into our ERM process
• Communication of Xerox GHG performance via CDP disclosure to specific customers upon request, and completion of customized sustainability questionnaires as requested
• Overview of Xerox services & products
• Collaboration opportunities

Impact of engagement, including measures of success

Most customer engagement results in a conversation between the Xerox account manager, the sales team and the customer representative to discuss in detail the information presented. This translates into revenue opportunities for Xerox the majority of the time, which we use to measure the success of the engagement. It also reinforces the customer loyalty to Xerox.

In 2021, Xerox won 14 new business contracts in the private and public sector where Corporate Social Responsibility including climate related components factored into the winning decision of a total value of over $37million annually.

Type of engagement & Details of engagement

Education/information sharing
Run an engagement campaign to educate customers about the climate change impacts of (using) your products, goods, and/or services

% of customers by number

100

% of customer - related Scope 3 emissions as reported in C6.5

0

Please explain the rationale for selecting this group of customers and scope of engagement

Xerox account managers regularly contact the EHS&S department requesting environmental sustainability presentations to share with current customers and new or

potential clients. The presentations include Xerox sustainability history highlighting accomplishments such as "power down" mode, Earth Smart print driver features, such as duplex (two-sided printing), n-up (multiple pages per sheet), proof print and toner saving modes), Print Awareness Tool, and Xerox ConnectKey ™ technology, etc. highlighting innovation for sustainability benefits that help Xerox customers to address climate change impacts in their operations using our products, goods or services. The Gil Hatch Center, located at the Webster campus is a customer engagement center that showcases Xerox® digital technology, solutions and services portfolio.

Customers are invited to the center to learn about our products and technologies, as well as to participate in:
• Thought Leadership Workshops (events focused on a group of like customers or a specific market segment, focusing on the delivery of strategic messages along with a variety of presentations and technical demonstrations)
• Executive Customer Exchange (an event focused on a single account with an agenda designed to meet the requirements of that particular account); and
• Lab Days (an opportunity for the customer to bring their files and/or stock and have them run on a specific piece of equipment).

Impact of engagement, including measures of success

Most customer engagement results in a conversation between the Xerox account manager, the sales team and the customer representative to discuss in detail information about the new technology, products or services presented. This translates into revenue opportunities for Xerox the majority of the time, which we use to measure the success of the engagement. It also reinforces customer loyalty to Xerox and opens opportunities for collaboration. The Xerox Energy and Climate Change Specialist regularly prepares customized impact assessments upon request for current customers, and has prepared estimates for sales managers to use in contacts with prospective clients. These presentations enable client managers to have detailed sustainability discussions with their customers. For example, sustainability implications and other Xerox service and support advantages played into a University of Michigan decision to go entirely with Xerox machines. Xerox is also participating as a founding member in the Department for Environment, Food and Rural Affairs (Defra) new initiative bringing together businesses, NGOs and policymakers in a joint ambition to making the UK's information technology (IT) sector more sustainable. Through our Intelligent Workplace cloud-based Solution, Xerox achieved their customer requirement for a workflow and print environment that would help them achieve their ambitious Net Xerox Goal. As a result, Defra asked Xerox to join their Defra e-Sustainability Alliance (DeSA) to define procurement criteria in support of energy and GHG reduction. This coalition of organizations will be producing regular blogs for Defra, outlining best practice advice on the ways in which IT firms of all sizes can minimize their environmental impacts and how non-IT businesses can use digital technologies to drive progress towards the Sustainable Development Goals (SDGs). In a first step towards this knowledge sharing, DeSA this week published a guide detailing how businesses can use IT to align their work with the SDGs and the UK Government's 25-Year Environment Plan. Entitled 'helping businesses create a greener, more sustainable future through ICT', the

document is intended to support "anyone with an interest in the relationship between sustainability and IT", regardless of their employers' size or position in the sector's value chain.

C12.2

(C12.2) Do your suppliers have to meet climate-related requirements as part of your organization's purchasing process?

Yes, climate-related requirements are included in our supplier contracts

C12.2a

(C12.2a) Provide details of the climate-related requirements that suppliers have to meet as part of your organization's purchasing process and the compliance mechanisms in place.

Climate-related requirement

Climate-related disclosure through a public platform

Description of this climate related requirement

In 2008, we became a member of the Responsible Business Alliance – RBA (formerly EICC) whose Code of Conduct sets industry standards on social, environmental and ethical issues in the electronics industry supply chain. We have adopted the RBA Code of Conduct as our Supplier Code of Conduct. We continually reinforce the importance of the Supplier Code of Conduct to our supplier base. We incorporate standards from the Supplier Code of Conduct in purchase agreements. We run a risk assessment and require suppliers to participate in the Xerox Compliance Program.

Participants are to establish a corporate-wide greenhouse gas reduction goal. Energy consumption and all relevant Scopes 1 and 2 greenhouse gas emissions are to be tracked, documented, and publicly reported against the greenhouse gas reduction goal. Participants are to look for methods to improve energy efficiency and to minimize their energy consumption and greenhouse gas emissions.

% suppliers by procurement spend that have to comply with this climate-related requirement

Retain and engage

C12.3

(C12.3) Does your organization engage in activities that could either directly or indirectly influence policy, law, or regulation that may impact the climate?

Row 1

Direct or indirect engagement that could influence policy, law, or regulation that may impact the climate
Yes, we engage directly with policy makers
Yes, we engage indirectly through trade associations

Does your organization have a public commitment or position statement to conduct your engagement activities in line with the goals of the Paris Agreement?
No, but we plan to have one in the next two years

Describe the process(es) your organization has in place to ensure that your engagement activities are consistent with your overall climate change strategy
Our Office of Global Government Affairs coordinates and oversees all policy-based interactions with governments and governmental organizations across the nation and around the world and is responsible for undertaking comprehensive annual reviews of our environmental partnerships to ensure alignment of Xerox's environmental priorities.

In addition, our Office of Global Government Affairs has the exclusive authority to express the Xerox position on matters of public policy, including climate change. By restricting such communications to the Office of Global Government Affairs, Xerox ensures that the company speaks with one voice on matters of climate related public policy.

C12.3a

(C12.3a) On what policy, law, or regulation that may impact the climate has your organization been engaging directly with policy makers in the reporting year?

Focus of policy, law, or regulation that may impact the climate
Minimum energy efficiency requirements

Specify the policy, law, or regulation on which your organization is engaging with policy makers

ENERGY STAR® is the government-backed symbol for energy efficiency, providing simple, credible, and unbiased information that consumers and businesses rely on to make well-informed decisions. Thousands of industrial, commercial, utility, state, and local organizations—including nearly 40% of the Fortune 500®—partner with the U.S. Environmental Protection Agency (EPA) to deliver cost-saving energy efficiency solutions that protect the climate while improving air quality and protecting public health. Since 1992, ENERGY STAR and its partners have helped American families and businesses save 5 trillion kilowatt-hours of electricity, avoid more than $500 billion in energy costs, and achieve 4 billion metric tons of greenhouse gas reductions. Over the lifetime of the program, every dollar EPA has spent on ENERGY STAR resulted in nearly $350 in energy cost savings for American business and households. In 2020 alone, ENERGY STAR and its partners helped Americans save more than 520 billion kilowatt-hours of electricity and avoid $42 billion in energy costs.

Policy, law, or regulation geographic coverage
National

Country/region the policy, law, or regulation applies to
United States of America

Your organization's position on the policy, law, or regulation
Support with no exceptions

Description of engagement with policy makers
Xerox has engaged directly with the US Environmental Protection Agency (EPA) and responded to consultations regarding updates to its ENERGY STAR eco-label specification for the Imaging Equipment Standard. We engage on an "as needed" basis when these rules and standards come up for review. For instance, Xerox served as a technical advisor for the last several versions (3.1 & 3.2) of the Energy Star specification. In support of Version 3.1 which went into effect late 2020, we defined the requirements for remanufactured products for inclusion as a product category. For the current version of the standard (Version 3.2), Xerox tested several models and provided data in support of the new Professional Equipment category released in December 2021.

Details of exceptions (if applicable) and your organization's proposed alternative approach to the policy, law or regulation

Have you evaluated whether your organization's engagement is aligned with the goals of the Paris Agreement?
Yes, we have evaluated, and it is aligned

C12.3b

(C12.3b) Provide details of the trade associations your organization engages with which are likely to take a position on any policy, law or regulation that may impact the climate.

Trade association

Other, please specify

Information Technology Industry Council (ITI)

Is your organization's position on climate change consistent with theirs?

Consistent

Has your organization influenced, or is your organization attempting to influence their position?

We have already influenced them to change their position

State the trade association's position on climate change, explain where your organization's position differs, and how you are attempting to influence their position (if applicable)

"ITI strongly supports international cooperation and partnership on addressing climate change, and welcomed the United States' re-entry into the Paris Agreement of United Nations Framework Convention on Climate Change and support the United Nations 2030 Agenda for Sustainable Development and its Sustainable Development Goals (SDGs) as part of climate change solutions and social equity." "To address industry's climate footprint, ITI recommend that U.S. policies – both for government and industry – reflect mandatory targets that meet or exceed recommendations by the Intergovernmental Panel on Climate Change (IPCC). Further, ITI supports government investment in clean technologies, infrastructure, and programs." "ITI announced its participation in the United Nations' Race to Zero campaign as an Accelerator. As governments across the world work to implement the goals of COP26, ITI's involvement in the Race to Zero campaign advances its commitment to continuing the call for climate leadership on a healthy, resilient, net-zero carbon recovery that prevents future threats, creates green jobs, and unlocks inclusive, sustainable growth."

https://www.itic.org/policy/environment-sustainability/climate-change
https://www.itic.org/news-events/news-releases/iti-joins-united-nations-race-to-zero-campaign

ITI's climate position aligns with Xerox's climate position on emissions reduction, investment in innovative technology, and industry collaboration to mitigate climate issues.

Funding figure your organization provided to this trade association in the reporting year, if applicable (currency as selected in C0.4) (optional)

Describe the aim of your organization's funding

Have you evaluated whether your organization's engagement with this trade association is aligned with the goals of the Paris Agreement?

Yes, we have evaluated, and it is aligned

C12.4

(C12.4) Have you published information about your organization's response to climate change and GHG emissions performance for this reporting year in places other than in your CDP response? If so, please attach the publication(s).
